TRÜBNER'S ORIENTAL SERIES.

"A knowledge of the commonplace, at least, of Oriental literature, philosophy, and religion is as necessary to the general reader of the present day as an acquaintance with the Latin and Greek classics was a generation or so ago. Immense strides have been made within the present century in these branches of learning; Sanskrit has been brought within the range of accurate philology, and its invaluable ancient literature thoroughly investigated; the language and sacred books of the Zoroastrians have been laid bare; Egyptian, Assyrian, and other records of the remote past have been deciphered, and a group of scholars speak of still more recondite Accadian and Hittite monuments; but the results of all the scholarship that has been devoted to these subjects have been almost inaccessible to the public because they were contained for the most part in learned or expensive works, or scattered throughout the numbers of scientific periodicals. Messrs. TRÜBNER & Co., in a spirit of enterprise which does them infinite credit, have determined to supply the constantly-increasing want, and to give in a popular, or, at least, a comprehensive form, all this mass of knowledge to the world."—*Times.*

THE INDIAN EMPIRE: ITS HISTORY, PEOPLE, AND PRODUCTS.

Being a revised form of the article "India," in the "Imperial Gazetteer," remodelled into chapters, brought up to date, and incorporating the general results of the Census of 1881.

By W. W. HUNTER, C.I.E., LL.D.,

Director-General of Statistics to the Government of India.

"The article 'India,' in Volume IV., is the touchstone of the work, and proves clearly enough the sterling metal of which it is wrought. It represents th essence of the 100 volumes which contain the results of the statistical survey conducted by Dr. Hunter throughout each of the 240 districts of India. It is, moreover, the only attempt that has ever been made to show how the Indian people have been built up, and the evidence from the original materials has been for the first time sifted and examined by the light of the local research in which the author was for so long engaged."—*Times.*

ESSAYS ON THE SACRED LANGUAGE, WRITINGS, AND RELIGION OF THE PARSIS.

By MARTIN HAUG, Ph.D.,

Late of the Universities of Tübingen, Göttingen, and Bonn; Superintendent of Sanskrit Studies, and Professor of Sanskrit in the Poona College.

Edited by Dr. E. W. WEST.

I. History of the Researches into the Sacred Writings and Religion of the Parsis, from the Earliest Times down to the Present.
II. Languages of the Parsi Scriptures.
III. The Zend-Avesta, or the Scripture of the Parsis.
IV. The Zoroastrian Religion, as to its Origin and Development.

"'Essays on the Sacred Language, Writings, and Religion of the Parsis,' by the late Dr. Martin Haug, edited by Dr. E. W. West. The author intended, on his return from India, to expand the materials contained in this work into a comprehensive account of the Zoroastrian religion, but the design was frustrated by his untimely death. We have, however, in a concise and readable form, a history of the researches into the sacred writings and religion of the Parsis from the earliest times down to the present—a dissertation on the languages of the Parsi Scriptures, a translation of the Zend-Avesta, or the Scripture of the Parsis, and a dissertation on the Zoroastrian religion, with especial reference to its origin and development."—*Times.*

TEXTS FROM THE BUDDHIST CANON

COMMONLY KNOWN AS "DHAMMAPADA."

With Accompanying Narratives.

Translated from the Chinese by S. BEAL, B.A., Professor of Chinese University College, London.

The Dhammapada, as hitherto known by the Pali Text Edition, as edited by Fausböll, by Max Müller's English, and Albrecht Weber's German translations, consists only of twenty-six chapters or sections, whilst the Chinese version, or rather recension, as now translated by Mr. Beal, consists of thirty-nine sections. The students of Pali who possess Fausböll's text, or either of the above-named translations, will therefore needs want Mr. Beal's English rendering of the Chinese version; the thirteen above-named additional sections not being accessible to them in any other form; for, even if they understand Chinese, the Chinese original would be unobtainable by them.

"Mr. Beal's rendering of the Chinese translation is a most valuable aid to the critical study of the work. It contains authentic texts gathered from ancient canonical books, and generally connected with some incident in the history of Buddha. Their great interest, however, consists in the light which they throw upon everyday life in India at the remote period at which they were written, and upon the method of teaching adopted by the founder of the religion. The method employed was principally parable, and the simplicity of the tales and the excellence of the morals inculcated, as well as the strange hold which they have retained upon the minds of millions of people, make them a very remarkable study."—*Times.*

"Mr. Beal, by making it accessible in an English dress, has added to the great services he has already rendered to the comparative study of religious history."—*Academy.*

"Valuable as exhibiting the doctrine of the Buddhists in its purest, least adulterated form, it brings the modern reader face to face with that simple creed and rule of conduct which won its way over the minds of myriads, and which is now nominally professed by 145 millions, who have overlaid its austere simplicity with innumerable ceremonies, forgotten its maxims, perverted its teaching, and so inverted its leading principle that a religion whose founder denied a God, now worships that founder as a god himself."—*Scotsman.*

THE HISTORY OF INDIAN LITERATURE.

By ALBRECHT WEBER.

Translated from the Second German Edition by JOHN MANN, M.A., and THÉODOR ZACHARIAE, Ph.D., with the sanction of the Author.

Dr. BUHLER, Inspector of Schools in India, writes:—"When I was Professor of Oriental Languages in Elphinstone College, I frequently felt the want of such a work to which I could refer the students."

Professor COWELL, of Cambridge, writes:—"It will be especially useful to the students in our Indian colleges and universities. I used to long for such a book when I was teaching in Calcutta. Hindu students are intensely interested in the history of Sanskrit literature, and this volume will supply them with all they want on the subject."

Professor WHITNEY, Yale College, Newhaven, Conn., U.S.A., writes:—"I was one of the class to whom the work was originally given in the form of academic lectures. At their first appearance they were by far the most learned and able treatment of their subject; and with their recent additions they still maintain decidedly the same rank."

"Is perhaps the most comprehensive and lucid survey of Sanskrit literature extant. The essays contained in the volume were originally delivered as academic lectures, and at the time of their first publication were acknowledged to be by far the most learned and able treatment of the subject. They have now been brought up to date by the addition of all the most important results of recent research."—*Times.*

A SKETCH OF THE MODERN LANGUAGES OF THE EAST INDIES.

By ROBERT N. CUST.

The Author has attempted to fill up a vacuum, the inconvenience of which pressed itself on his notice. Much had been written about the languages of the East Indies, but the extent of our present knowledge had not even been brought to a focus. It occurred to him that it might be of use to others to publish in an arranged form the notes which he had collected for his own edification.

"Supplies a deficiency which has long been felt."—*Times.*

"The book before us is then a valuable contribution to philological science. It passes under review a vast number of languages, and it gives, or professes to give, in every case the sum and substance of the opinions and judgments of the best-informed writers."—*Saturday Review.*

THE BIRTH OF THE WAR-GOD.

A Poem. By KALIDASA.

Translated from the Sanskrit into English Verse by RALPH T. H. GRIFFITH, M.A.

"A very spirited rendering of the *Kumárasambhava*, which was first published twenty-six years ago, and which we are glad to see made once more accessible."—*Times.*

"Mr. Griffith's very spirited rendering is well known to most who are at all interested in Indian literature, or enjoy the tenderness of feeling and rich creative imagination of its author."—*Indian Antiquary.*

"We are very glad to welcome a second edition of Professor Griffith's admirable translation. Few translations deserve a second edition better."—*Athenæum.*

A CLASSICAL DICTIONARY OF HINDU MYTHOLOGY AND RELIGION, GEOGRAPHY, HISTORY, AND LITERATURE.

By JOHN DOWSON, M.R.A.S.,
Late Professor of Hindustani, Staff College.

In this work an endeavour has been made to supply the long-felt want of a Hindu Classical Dictionary. The main portion of this work consists of mythology, but religion is bound up with mythology, and in many points the two are quite inseparable.

This work will be a book of reference for all concerned in the government of the Hindus, but it will be more especially useful to young Civil Servants, and to masters and students in the universities, colleges, and schools in India.

"This not only forms an indispensable book of reference to students of Indian literature, but is also of great general interest, as it gives in a concise and easily accessible form all that need be known about the personages of Hindu mythology whose names are so familiar, but of whom so little is known outside the limited circle of *savants*."—*Times*.

"It is no slight gain when such subjects are treated fairly and fully in a moderate space; and we need only add that the few wants which we may hope to see supplied in new editions detract but little from the general excellence of Mr. Dowson's work."—*Saturday Review*.

SELECTIONS FROM THE KORAN.

By EDWARD WILLIAM LANE,

Hon. Doctor of Literature, Leyden, &c., &c.; Translator of "The Thousand and One Nights;" &c., &c.

A New Edition, Revised and Enlarged, with an Introduction by
Stanley Lane Poole.

". . . Has been long esteemed in this country as the compilation of one of the greatest Arabic scholars of the time, the late Mr. Lane, the well-known translator of the 'Arabian Nights.' . . . The present editor has enhanced the value of his relative's work by divesting the text of a great deal of extraneous matter introduced by way of comment, and prefixing an introduction."—*Times*.

"Mr. Poole is both a generous and a learned biographer. . . . Mr. Poole tells us the facts . . . so far as it is possible for industry and criticism to ascertain them, and for literary skill to present them in a condensed and readable form."—*Englishman, Calcutta*.

MODERN INDIA AND THE INDIANS,

BEING A SERIES OF IMPRESSIONS, NOTES, AND ESSAYS.

By MONIER WILLIAMS, D.C.L.,

Hon. LL.D. of the University of Calcutta, Hon. Member of the Bombay Asiatic Society, Boden Professor of Sanskrit in the University of Oxford.

Third Edition, revised and augmented by considerable Additions, with Illustrations and a Map.

This edition will be found a great improvement on those that preceded it. The author has taken care to avail himself of all such criticisms on particular passages in the previous editions as appeared to him to be just, and he has enlarged the work by more than a hundred pages of additional matter.

"In this volume we have the thoughtful impressions of a thoughtful man on some of the most important questions connected with our Indian Empire. . . . An enlightened observant man, travelling among an enlightened observant people, Professor Monier Williams has brought before the public in a pleasant form more of the manners and customs of the Queen's Indian subjects than we ever remember to have seen in any one work. He not only deserves the thanks of every Englishman for this able contribution to the study of Modern India—a subject with which we should be specially familiar—but he deserves the thanks of every Indian, Parsee or Hindu, Buddhist and Moslem, for his clear exposition of their manners, their creeds, and their necessities."—*Times*.

THE LIFE OR LEGEND OF GAUDAMA,

THE BUDDHA OF THE BURMESE. With Annotations.

The Ways to Neibban, and Notice on the Phongyies or Burmese Monks.

By the Right Rev. P. BIGANDET,

Bishop of Ramatha, Vicar-Apostolic of Ava and Pegu.

"The work is furnished with copious notes, which not only illustrate the subject-matter, but form a perfect encyclopædia of Buddhist lore."—*Times.*

"A work which will furnish European students of Buddhism with a most valuable help in the prosecution of their investigations."—*Edinburgh Daily Review.*

"Bishop Bigandet's invaluable work, . . . and no work founded—rather translated—from original sources presents to the Western student a more faithful picture than that of Bishop Bigandet."—*Indian Antiquary.*

"Viewed in this light, its importance is sufficient to place students of the subject under a deep obligation to its author."—*Calcutta Review.*

"This work is one of the greatest authorities upon Buddhism."—*Dublin Review.*

CHINESE BUDDHISM.

A VOLUME OF SKETCHES, HISTORICAL AND CRITICAL.

By J. EDKINS, D.D.

Author of "China's Place in Philology," "Religion in China," &c. &c.

"It contains a vast deal of important information on the subject, such as is only to be gained by long-continued study on the spot."—*Athenæum.*

"It is impossible within our limits even to mention the various subjects connected with Buddhism with which Dr. Edkins deals."—*Saturday Review.*

"Upon the whole, we know of no work comparable to it for the extent of its original research, and the simplicity with which this complicated system of philosophy, religion, literature, and ritual is set forth."—*British Quarterly Review.*

"The whole volume is replete with learning. . . . It deserves most careful study from all interested in the history of the religions of the world, and expressly of those who are concerned in the propagation of Christianity. Dr. Edkins notices in terms of just condemnation the exaggerated praise bestowed upon Buddhism by recent English writers."—*Record.*

THE GULISTAN;

Or, ROSE GARDEN OF SHEKH MUSHLIU'D-DIN SADI OF SHIRAZ.

Translated for the First Time into Prose and Verse, with an Introductory Preface, and a Life of the Author, from the Atish Kadah,

By EDWARD B. EASTWICK, C.B., M.A., F.R.S., M.R.A.S.,

Of Merton College, Oxford, &c.

"It is a very fair rendering of the original."—*Times.*

"The new edition has long been desired, and will be welcomed by all who take any interest in Oriental poetry. The *Gulistan* is a typical Persian verse-book of the highest order. Mr. Eastwick's rhymed translation . . . has long established itself in a secure position as the best version of Sadi's finest work."—*Academy.*

"It is both faithfully and gracefully executed."—*Tablet.*

LINGUISTIC AND ORIENTAL ESSAYS.

WRITTEN FROM THE YEAR 1846 TO 1878.

BY ROBERT NEEDHAM CUST,

Late Member of Her Majesty's Indian Civil Service; Hon. Secretary to the Royal Asiatic Society;
and Author of "The Modern Languages of the East Indies."

"We know none who has described Indian life, especially the life of the natives, with so much learning, sympathy, and literary talent."—*Academy.*

"It is impossible to do justice to any of these essays in the space at our command. . . But they seem to us to be full of suggestive and original remarks."—*St. James's Gazette.*

"His book contains a vast amount of information, . . . of much interest to every intelligent reader. It is, he tells us, the result of thirty-five years of inquiry, reflection, and speculation, and that on subjects as full of fascination as of food for thought."—*Tablet.*

"The essays . . . . . exhibit such a thorough acquaintance with the history and antiquities of India as to entitle him to speak as one having authority."—*Edinburgh Daily Review.*

"The author speaks with the authority of personal experience. . . . . It is this constant association with the country and the people which gives such a vividness to many of the pages."—*Athenæum.*

BUDDHIST BIRTH STORIES; or, Jataka Tales.

The Oldest Collection of Folk-lore Extant:

BEING THE JATAKATTHAVANNANA,

For the first time Edited in the original Pāli.

BY V. FAUSBOLL;
And Translated by T. W. RHYS DAVIDS.

Translation. Volume I.

"These are tales supposed to have been told by the Buddha of what he had seen and heard in his previous births. They are probably the nearest representatives of the original Aryan stories from which sprang the folk-lore of Europe as well as India, and from which the Semitic nations also borrowed much. The introduction contains a most interesting disquisition on the migrations of these fables, tracing their reappearance in the various groups of folk-lore legends respectively known as 'Æsop's Fables,' the 'Hitopadesa,' the Calilag and Damnag series, and even 'The Arabian Nights.' Among other old friends, we meet with a version of the Judgment of Solomon, which proves, after all, to be an Aryan, and not a Semitic tale."—*Times.*

"It is now some years since Mr. Rhys Davids asserted his right to be heard on this subject by his able article on Buddhism in the new edition of the 'Encyclopædia Britannica.'"—*Leeds Mercury.*

"All who are interested in Buddhist literature ought to feel deeply indebted to Mr. Rhys Davids. His well-established reputation as a Pali scholar is a sufficient guarantee for the fidelity of his version, and the style of his translations is deserving of high praise."—*Academy.*

"It is certain that no more competent expositor of Buddhism could be found than Mr. Rhys Davids, and that these Birth Stories will be of the greatest interest and importance to students. In the Jātaka book we have, then, a priceless record of the earliest imaginative literature of our race; and Mr. Rhys Davids is well warranted in claiming that it presents to us a nearly complete picture of the social life and customs and popular beliefs of the common people of Aryan tribes, closely related to ourselves, just as they were passing through the first stages of civilisation."—*St. James's Gazette.*

A TALMUDIC MISCELLANY;

Or, A THOUSAND AND ONE EXTRACTS FROM THE TALMUD, THE MIDRASHIM, AND THE KABBALAH.

Compiled and Translated by PAUL ISAAC HERSHON,

Author of "Genesis According to the Talmud," &c.

With Notes and Copious Indexes.

"To obtain in so concise and handy a form as this volume a general idea of the Talmud is a boon to Christians at least."—*Times.*

"This is a new volume of the 'Oriental Series,' and its peculiar and popular character will make it attractive to general readers. Mr. Hershon is a very competent scholar. . . . The present selection contains samples of the good, bad, and indifferent, and especially extracts that throw light upon the Scriptures. The extracts have been all derived, word for word, and made at first hand, and references are carefully given."—*British Quarterly Review.*

"Mr. Hershon's book, at all events, will convey to English readers a more complete and truthful notion of the Talmud than any other work that has yet appeared."—*Daily News.*

"Without overlooking in the slightest the several attractions of the previous volumes of the 'Oriental Series,' we have no hesitation in saying that this surpasses them all in interest."—*Edinburgh Daily Review.*

"Mr. Hershon has done this; he has taken samples from all parts of the Talmud, and thus given English readers what is, we believe, a fair set of specimens which they can test for themselves."—*The Record.*

"Altogether we believe that this book is by far the best fitted in the present state of knowledge to enable the general reader or the ordinary student to gain a fair and unbiassed conception of the multifarious contents of the wonderful miscellany which can only be truly understood—so Jewish pride asserts—by the life-long devotion of scholars of the Chosen People."—*Inquirer.*

"The value and importance of this volume consist in the fact that scarcely a single extract is given in its pages but throws some light, direct or refracted, upon those Scriptures which are the common heritage of Jew and Christian alike."—*John Bull.*

"His acquaintance with the Talmud, &c., is seen on every page of his book. . . It is a capital specimen of Hebrew scholarship; a monument of learned, loving, light-giving labour."—*Jewish Herald.*

THE CLASSICAL POETRY OF THE JAPANESE.

By BASIL HALL CHAMBERLAIN,

Author of "Yeigo Heñkaku Shirañ."

"A very curious volume. The author has manifestly devoted much labour to the task of studying the poetical literature of the Japanese, and rendering characteristic specimens into English verse."—*Daily News.*

"Mr. Chamberlain's volume is, so far as we are aware, the first attempt which has been made to interpret the literature of the Japanese to the western world. It is to the classical poetry of Old Japan that we must turn for indigenous Japanese thought, and in the volume before us we have a selection from that poetry rendered into graceful English verse."—*Tablet.*

"It is undoubtedly one of the best translations of lyric literature which has appeared during the close of the last year."—*Celestial Empire.*

"Mr. Chamberlain set himself a difficult task when he undertook to reproduce Japanese poetry in an English form. But he has evidently laboured *con amore*, and his efforts are successful to a degree."—*London and China Express.*

THE HISTORY OF ESARHADDON (Son of Sennacherib),

KING OF ASSYRIA, B.C. 681–668.

Translated from the Cuneiform Inscriptions upon Cylinders and Tablets in the British Museum Collection; together with a Grammatical Analysis of each Word, Explanations of the Ideographs by Extracts from the Bi-Lingual Syllabaries, and List of Eponyms, &c.

BY ERNEST A. BUDGE, B.A., M.R.A.S.,

Assyrian Exhibitioner, Christ's College, Cambridge, Member of the Society of Biblical Archæology.

"Students of scriptural archæology will also appreciate the 'History of Esarhaddon.'"—*Times.*

"There is much to attract the scholar in this volume. It does not pretend to popularise studies which are yet in their infancy. Its primary object is to translate, but it does not assume to be more than tentative, and it offers both to the professed Assyriologist and to the ordinary non-Assyriological Semitic scholar the means of controlling its results."—*Academy.*

"Mr. Budge's book is, of course, mainly addressed to Assyrian scholars and students. They are not, it is to be feared, a very numerous class. But the more thanks are due to him on that account for the way in which he has acquitted himself in his laborious task."—*Tablet.*

INDIAN POETRY;

Containing a New Edition of the "Indian Song of Songs," from the Sanscrit of the "Gita Govinda" of Jayadeva; Two Books from "The Iliad of India" (Mahabharata), "Proverbial Wisdom" from the Shlokas of the Hitopadesa, and other Oriental Poems.

By EDWIN ARNOLD, C.S.I., Author of "The Light of Asia."

"In this new volume of Messrs. Trübner's Oriental Series, Mr. Edwin Arnold does good service by illustrating, through the medium of his musical English melodies, the power of Indian poetry to stir European emotions. The 'Indian Song of Songs' is not unknown to scholars. Mr. Arnold will have introduced it among popular English poems. Nothing could be more graceful and delicate than the shades by which Krishna is portrayed in the gradual process of being weaned by the love of

'Beautiful Radha, jasmine-bosomed Radha,'

from the allurements of the forest nymphs, in whom the five senses are typified."—*Times.*

"The studious reader of Mr. Arnold's verse will have added richly to his store of Oriental knowledge . . . infused in every page of this delightful volume. . . . No other English poet has ever thrown his genius and his art so thoroughly into the work of translating Eastern ideas as Mr. Arnold has done in his splendid paraphrases of language contained in these mighty epics."—*Daily Telegraph.*

"The poem abounds with imagery of Eastern luxuriousness and sensuousness; the air seems laden with the spicy odours of the tropics, and the verse has a richness and a melody sufficient to captivate the senses of the dullest."—*Standard.*

"The translator, while producing a very enjoyable poem, has adhered with tolerable fidelity to the original text."—*Overland Mail.*

"We certainly wish Mr. Arnold success in his attempt 'to popularise Indian classics,' that being, as his preface tells us, the goal towards which he bends his efforts."—*Allen's Indian Mail.*

THE RELIGIONS OF INDIA.

By A. BARTH.

Translated from the French with the authority and assistance of the Author.

The author has, at the request of the publishers, considerably enlarged the work for the translator, and has added the literature of the subject to date; the translation may, therefore, be looked upon as an equivalent of a new and improved edition of the original.

"This last addition to Messrs. Trübner's 'Oriental Series' is not only a valuable manual of the religions of India, which marks a distinct step in the treatment of the subject, but also a useful work of reference."—*Academy.*

"This volume is a reproduction, with corrections and additions, of an article contributed by the learned author two years ago to the 'Encyclopédie des Sciences Religieuses.' It attracted much notice when it first appeared, and is generally admitted to present the best summary extant of the vast subject with which it deals."—*Tablet.*

"This is not only on the whole the best but the only manual of the religions of India, apart from Buddhism, which we have in English. The present work is in every way worthy of the promising school of young French scholars to which the author belongs, and shows not only great knowledge of the facts and power of clear exposition, but also great insight into the inner history and the deeper meaning of the great religion, for it is in reality only one, which it proposes to describe."—*Modern Review.*

"The merit of the work has been emphatically recognised by the most authoritative Orientalists, both in this country and on the continent of Europe, and Messrs. Trübner have done well in adding it to their 'Oriental Series.' But probably there are few Indianists (if we may use the word) who would not derive a good deal of information from it, and especially from the extensive bibliography provided in the notes."—*Dublin Review.*

". . . . Such a sketch M. Barth has drawn with a master hand, and his bold, clear method of treating his difficult subject is scarcely marred by a translation which would have rendered a less perspicuous style utterly incomprehensible."—*Critic (New York).*

HINDU PHILOSOPHY.

THE SĀNKHYA KĀRIKA OF IS'WARA KRISHNA.

An Exposition of the System of Kapila, with an Appendix on the Nyāya and Vais'eshika Systems.

BY JOHN DAVIES, M.A. (Cantab.), M.R.A.S.

The system of Kapila is the earliest attempt on record to give an answer from reason alone to the mysterious questions which arise in every thoughtful mind about the origin of the world, the nature and relations of man and his future destiny. It contains nearly all that India has produced in the department of pure philosophy. Other systems, though classed as philosophic, are mainly devoted to logic and physical science, or to an exposition of the Vedas.

"Such a combination of words is discouraging to the non-Orientalist, but fortunately for him he finds in Mr. Davies a patient and learned guide who leads him into the intricacies of the philosophy of India, and supplies him with a clue, that he may not be lost in them—nay more, points out to him the similarity between the speculations of the remote East and of modern Germany, however much they may differ in external appearance. In the preface he states that the system of Kapila is the 'earliest attempt on record to give an answer, from reason alone, to the mysterious questions which arise in every thoughtful mind about the origin of the world, the nature and relations of man and his future destiny,' and in his learned and able notes he exhibits 'the connection of the Sankhya system with the philosophy of Spinoza,' and 'the connection of the system of Kapila with that of Schopenhauer and Von Hartmann.'"—*Foreign Church Chronicle.*

"Mr. Davies's volume on Hindu Philosophy is an undoubted gain to all students of the development of thought. The system of Kapila which, is here given in a translation from the Sānkhya Kārikā, is the only contribution of India to pure philosophy. The older system of Kapila, however, though it could never have been very widely accepted or understood, presents many points of deep interest to the student of comparative philosophy, and without Mr. Davies's lucid interpretation it would be difficult to appreciate these points in any adequate manner."—*Saturday Review.*

"We welcome Mr. Davies's book as a valuable addition to our philosophical library."—*Notes and Queries.*

THE MIND OF MENCIUS;

OR, POLITICAL ECONOMY FOUNDED UPON MORAL PHILOSOPHY.

A SYSTEMATIC DIGEST OF THE DOCTRINES OF THE CHINESE PHILOSOPHER MENCIUS.

Translated from the Original Text and Classified, with Comments and Explanations,

By the REV. ERNST FABER, Rhenish Mission Society.

Translated from the German, with Additional Notes,

By the REV. A. B. HUTCHINSON, C.M.S., Church Mission, Hong Kong, Author of "Chinese Primer, Old Testament History."

"The Mind of Mencius" is a Translation from the German of one of the most original and useful works on Chinese Philosophy ever published.

"Mr. Faber is already well known in the field of Chinese studies by his digest of the doctrines of Confucius. In the present volume he gives us a systematic digest of those of Mencius, the greatest and most popular of the disciples of Confucius. The value of this work will be perceived when it is remembered that at no time since relations commenced between China and the West has the former been so powerful—we had almost said aggressive—as now. For those who will give it careful study, Mr. Faber's work is one of the most valuable of the excellent series to which it belongs."—*Nature.*

A MANUAL OF HINDU PANTHEISM. VEDÂNTASÂRA.

Translated, with copious Annotations, by MAJOR G. A. JACOB, Bombay Staff Corps; Inspector of Army Schools.

The design of this little work is to provide for missionaries, and for others who, like them, have little leisure for original research, an accurate summary of the doctrines of the Vedânta.

"There can be no question that the religious doctrines most widely held by the people of India are mainly Pantheistic. And of Hindu Pantheism, at all events in its most modern phases, its Vedântasâra presents the best summary. But then this work is a mere summary: a skeleton, the dry bones of which require to be clothed with skin and bones, and to be animated by vital breath before the ordinary reader will discern in it a living reality. Major Jacob, therefore, has wisely added to his translation of the Vedântasâra copious notes from the writings of well-known Oriental scholars, in which he has, we think, elucidated all that required elucidation. So that the work, as here presented to us, presents no difficulties which a very moderate amount of application will not overcome."—*Tablet.*

"The modest title of Major Jacob's work conveys but an inadequate idea of the vast amount of research embodied in his notes to the text of the Vedantasara. So copious, indeed, are these, and so much collateral matter do they bring to bear on the subject, that the diligent student will rise from their perusal with a fairly adequate view of Hindû philosophy generally. It is, perhaps, to be regretted that the author has not confined himself to exposition, and left his readers to form their own opinion of the value of the tenets described. But this is the only fault we have to find with his book, which, in other respects, is one of the best of its kind that we have seen."—*Calcutta Review.*

THE SUPREME BEING OF THE KHOI-KHOI.

BY THEOPHILUS HAHN, Ph.D.,

Custodian of the Grey Collection, Cape Town; Corresponding Member of the Geogr. Society, Dresden; Corresponding Member of the Anthropological Society, Vienna, &c., &c.

"The first instalment of Dr. Hahn's labours will be of interest, not at the Cape only, but in every University of Europe. It is, in fact, a most valuable contribution to the comparative study of religion and mythology. Accounts of their religion and mythology were scattered about in various books; these have been carefully collected by Dr. Hahn and printed in his second chapter, enriched and improved by what he has been able to collect himself."—*Prof. Max Müller in the Nineteenth Century.*

"Dr. Hahn's book is that of a man who is both a philologist and believer in philological methods, and a close student of savage manners and customs."—*Saturday Review.*

THE QUATRAINS OF OMAR KHAYYAM.

Translated by E. H. WHINFIELD, M.A.,
Barrister-at-Law, late H.M. Bengal Civil Service.

Omar Khayyám (the tent-maker) was born about the middle of the fifth century of the Hejirah, corresponding to the eleventh of the Christian era, in the neighbourhood of Naishapur, the capital of Khorasán, and died in 517 A.H. (=1122 A.D.)

"Mr. Whinfield has executed a difficult task with considerable success, and his version contains much that will be new to those who only know Mr. Fitzgerald's delightful selection."—*Academy.*

"There are several editions of the Quatrains, varying greatly in their readings. Mr. Whinfield has used three of these for his excellent translation. The most prominent features in the Quatrains are their profound agnosticism, combined with a fatalism based more on philosophic than religious grounds, their Epicureanism and the spirit of universal tolerance and charity which animates them."—*Calcutta Review.*

A COMPARATIVE HISTORY OF THE EGYPTIAN AND MESOPOTAMIAN RELIGIONS.

By Dr. C. P. TIELE.

Vol. I.—History of the Egyptian Religion.

Translated from the Dutch with the Assistance of the Author.

By JAMES BALLINGAL.

"This latest addition to 'Trübner's Oriental Series' may not prove one of the most attractive; but it is one of the most scholarly, and it places in the hands of the English readers a history of Egyptian Religion which is very complete, which is based on the best materials, and which has been illustrated by the latest results of research. In this volume there is a great deal of information, as well as independent investigation, for the trustworthiness of which Dr. Tiele's name is in itself a guarantee; and the description of the successive religions under the Old Kingdom, the Middle Kingdom, and the New Kingdom, is given in a manner which is scholarly and minute."—*Scotsman.*

YUSUF AND ZULAIKHA.

A POEM BY JAMI.

Translated from the Persian into English Verse.

BY RALPH T. H. GRIFFITH.

"Mr. Griffith, who has done already good service as translator into verse from the Sanscrit, has done further good work in this translation from the Persian, and he has evidently shown not a little skill in his rendering the quaint and very oriental style of his author into our more prosaic, less figurative, language. . . . The work, besides its intrinsic merits, is of importance as being one of the most popular and famous poems of Persia, and that which is read in all the independent native schools of India where Persian is taught. It is as interesting, also, as a striking instance of the manner in which the stories of the Jews have been transformed and added to by tradition among the Mahometans, who look upon Joseph as 'the ideal of manly beauty and more than manly virtue;' and, indeed, in this poem he seems to be endowed with almost divine, or at any rate angelic, gifts and excellence."—*Scotsman.*

THE SARVA-DARSANA-SAMGRAHA;

BY MADHAVA ACHARYA.

Translated by E. B. COWELL, M.A., Professor of Sanskrit in the University of Cambridge, and A. E. GOUGH, M.A., Professor of Philosophy in the Presidency College, Calcutta.

This work is an interesting specimen of Hindu critical ability. The author successively passes in review the sixteen philosophical systems current in the fourteenth century in the South of India; and he gives what appears to him to be their most important tenets.

"The translation is trustworthy throughout. A protracted sojourn in India, where there is a living tradition, has familiarised the translators with Indian thought."—*Athenæum.*

TIBETAN TALES DERIVED FROM INDIAN SOURCES.

Translated from the Tibetan of the KAH-GYUR.

BY F. ANTON VON SCHIEFNER.

Done into English from the German, with an Introduction,

BY W. R. S. RALSTON, M.A.

"The Tibetan Tales have been translated by Mr. Ralston from the German version of Schiefner. Mr. Ralston adds an introduction, which even the most persevering children of Mother Goose will probably find infinitely the most interesting portion of the work."—*Saturday Review.*

"Mr. Ralston, whose name is so familiar to all lovers of Russian folk-lore, has supplied some interesting Western analogies and parallels, drawn, for the most part, from Slavonic sources, to the Eastern folk-tales, culled from the Kahgyur, one of the divisions of the Tibetan sacred books."—*Academy.*

"The translation here presented of F. Anton Schiefner's work could scarcely have fallen into better hands than those of Mr. Ralston. An Introduction of some sixty-four pages gives the leading facts in the lives of those scholars who have given their attention to gaining a knowledge of the Tibetan literature and language, as well as an analysis of the tales."—*Calcutta Review.*

"This latest volume of 'Trübner's Oriental Series' ought to interest all who care for the East, for amusing stories, or for comparative folk-lore. Mr. Ralston, who has translated M. Schiefner's German, makes no pretension to being considered an Orientalist; but he is an expert in story-telling, and in knowledge of the comparative history of popular tales he has few rivals in England."—*Pall Mall Gazette.*

UDÂNAVARGA.

A COLLECTION OF VERSES FROM THE BUDDHIST CANON.

Compiled by DHARMATRÂTA.

BEING THE NORTHERN BUDDHIST VERSION OF DHAMMAPADA.

Translated from the Tibetan of Bkah-hgyur, with Notes, and Extracts from the Commentary of Pradjnavarman,

By W. WOODVILLE ROCKHILL.

"The work of which Mr. Rockhill has given us a translation is one already well known in the Southern Canon under the name of 'Dhammapada' or 'Scripture Texts.' . . . Of the Pali or Southern text, an edition (with Latin translation) was published in 1855 by Dr. Fausböll, the eminent Danish scholar. . . . Mr. Rockhill's present work is the first from which assistance will be gained for a more accurate understanding of the Pali text; it is, in fact, as yet the only term of comparison available to us. The 'Udanavarga,' the Thibetan version, was originally discovered by the late M. Schiefner, who published the Tibetan text, and had intended adding a translation, an intention frustrated by his death, but which has been carried out by Mr. Rockhill. . . . Mr. Rockhill may be congratulated for having well accomplished a difficult task."—*Saturday Review.*

"There is no need to look far into this book to be assured of its value."—*Athenæum.*

"The Tibetan verses in Mr. Woodville Rockhill's translation have all the simple directness and force which belong to the sayings of Gautama, when they have not been adorned and spoiled by enthusiastic disciples and commentators."—*St. James's Gazette.*

PREFACE.

In the notice prefixed to the "Essays on the Languages, Literature, and Religion of Nepal and Tibet" (1874), reference is made to the probability of a republication of the remaining papers of Mr. Hodgson, comprising not only Articles IV., V., and XI. of the "Selections from the Records of the Government of Bengal, No. XXVII.," which would have found their fittest place in that re-issue, but also his various Papers on the Tribes and Languages of the Northern Non-Aryans adjacent to India, with other Essays of a more general character. That probability has now become a reality, Mr. Hodgson having readily granted permission to the publishers of the "Essays" to bring out in a collected form also his remaining papers on Indian languages and ethnology. And inasmuch as the previous volume has already proved of essential service to scholars by placing within their easy reach materials theretofore accessible only to the favoured few who could consult the scarce serials in which the several articles had originally appeared, the present completion of the re-issue will, it is hoped, be sure of as cordial a welcome.

To the Papers numbered I. to VIII. the same value and interest attach at the present day as were accorded to them when they were published for the first time, hardly any fresh

materials having since come to light concerning the tribes and languages there treated of. This does not apply in the same degree to the various Papers comprised in the Ninth Section, which have been incorporated in the re-issue only with a view of completing Mr. Hodgson's conspectus of the general character and structural affinities of the Non-Aryan languages of India.

Lastly, the Papers, here reproduced in a more complete form, on the Pre-eminence of the Vernaculars have lost none of their significance even at the present moment, as the frequent reference made to them by the Press shews the abiding vitality of the subject.

Almost all the Papers, more especially the longer Linguistical Essays, have been reprinted from copies revised and annotated by the author himself, who has earned a fresh and lasting title to the gratitude of all students of Indian glossology and ethnology by allowing the rare and valuable Papers comprised in these volumes to be made generally available.

PART II.—GRAMMAR.

Orthography.

I MUST begin with the remark that I do not propose to say anything of the Kócch Grammar, which is wholly corrupt Bengálí. The reasons which have induced me to give the Kócch Vocabulary are stated elsewhere.* The following remarks will therefore apply solely to the Bódo and Dhimál languages—languages which, as it appears to me, have preserved to a wonderful extent their primitive raciness, both in vocables and in structure. Neither of them possesses, nor ever did possess, any alphabet or books, and I have consequently been left at liberty to apply to them any system of letters that might seem most advisable; for various reasons I have postponed the Nágari to the Roman, which latter I have, I hope, employed in a manner sufficiently conformable to that recognised by the Society,† except that, having no actual or prospective occasion to employ Arabic or Persian words or sounds, I have uniformly expressed the Indian *k* by the like English letter. The vowels are sounded as on the Continent of Europe and in Scotland—not as in England; and the graver or lengthened sound of each is denoted by an accent or mark above—thus *é*, a very long sound, in some rare instances, by reduplication as well as accent. A few sounds of this latter kind occur both in the Bódo and Dhimál languages, and in the former they subserve the important purpose of distinguishing the different senses of otherwise similar

* I have failed to get at the original and true speech of this race, whose ancient tongue is fast merging in Bengálí.

† For Méech read Bôdo, *passim*. Méech is a name imposed by strangers. This people call themselves Bodo, which, of course, is the proper designation. See note at Part III. Asiatic Society of Bengal, under whose auspices this essay was published.

words: thus, háno, 'to cut;' hääno, 'to be able;' jáno, 'to eat;' jääno, 'to be.' Instances of this kind are rare in the Bódo, and rarer in the Dhimál language. The Bódo and Dhimál tongues have an easy and flowing enunciation, which is readily represented by our letters. Compound consonant sounds are rare—any such compounds as the Sanskrit ksha, &c., unknown—aspirates common.

The nasal *n*, denoted by me by a dot above the letter (*ṅ*), is fully as common as in U'rdú and Hindí, and is not unfrequently complexed into a harsher sound, which I have denoted by *gn*. Two concurrent vowels are always to be understood as a diphthong* with one blended and long sound, unless when the second vowel is doubly dotted (*ö*), and in these cases, which are common in Bodo and Dhimál, each vowel is to have a perfect and independent utterance. The naso-guttural French *é* is frequent in Dhimál, and has sometimes a prolonged and very harsh sound, which I cannot represent otherwise than by reduplication and accent, thus éécha, 'a goat.' *Y* is always a consonant. In Bodo *n* is often prefixed to words beginning with a vowel, as Akai Nakaï, and in this tongue the use of *ch* for *j*, of *t* for *d*, of *k* for *g*, are commutations constantly occurring, but deemed vulgarisms.

Articles.

There is no article, definite or indefinite, in the Bodo or Dhimál tongue. The demonstrative pronouns *this* and *that* usually, and the numeral *one* more rarely, stand in lieu of articles.

Substantives.

Nouns, like verbs, have only *one* regimen or mode of declension; nor is that single uniform mode perplexed with any refinements expressive of gender. Declension is accomplished not by inflection, of which, strictly speaking, there is hardly a trace, but by affixes, or rather post-fixes, analogous to the U'rdú and Hindí post-positions. Number is similarly expressed, that is, by post-positions. In Bodo there are clearly

Number.

* I use three, *á* makes au, *é*, ai, and *ó*, ou, *e.g.*, hawfinch, *aye, aye, however.* See note at p. 82.

but two numbers, and I think also in Dhimál, though in the latter I have met with some vague traces of a dual, which further research may establish. In Bodo the word phúr, and in Dhimál the word galai, post-fixed simply to the noun, express the plural, thus, B., gotho, 'a child;' gotho phúr, 'children;' Dh., chan, 'a child;' chan galai, 'children.' These words have, I believe, no meaning whatever.

ender. By turning to the Vocabulary it will be seen that the Bodo and Dhimál tongues both possess a great variety of substantive sexual terms, which usually suffice, as in English, to denote all that is needful in the distinction of sex among human beings. There are exceptions, however, to this rule; and then the defect of specific terms is supplied by periphrasis. Thus the Bodo tongue has no simple words equivalent to the English boy and girl, and the sex of minors is therefore expressed thus: 'man-child,' 'woman-child,' or híwá gotho, hinjou gotho. In Dhimál, wájan and béjan are simple and exact equivalents for 'boy' and 'girl.' The word chan, which properly means the young of all creatures, is likewise used in Dhímál to express 'boy,' in opposition to chamdi, or 'girl,' which last word affords the only and faint trace in Dhimál (none in Bodo) of that happy facility of converting male into female words, by mere variation of the terminal letter or syllable, which characterises U'rdú and Hindí. Sex among animals, generally, exclusive of human beings, is expressed in Bodo by the post-fixes jolá and jó, and in Dhimál by the prefixes dánkhá and mahani, equivalent to 'male' and 'female;' thus B., múshú *bos;* múshú-jolá, 'a bull;' múshú-jó, 'a cow.' Dh., pía, dánkhá pía, and mahani pía respectively. There are likewise in both languages a variety of specific terms expressive of sex among the domesticated and familiar animals, as in English and other languages. These may be found in the Vocabulary. They have no grammatical effect or character whatever, and this remark may be generalised or applied to the whole subject of gender in Bodo and in Dhimál.

The gender of substantives consequently has no influence at all on adjectives or on verbs.

ase. Cases in Bodo and Dhimál are formed entirely by postpositions. There is no inflection whatever. Cases are nume-

rous; not less than nine were given to me. But all simple and direct languages which decline their nouns by means of pre- or post-positions have an almost unlimited field for the multiplication of cases. I apprehend that the companionative is a doubtful case, and that the ablative and instrumental are, normally, but one case, and also the dative and objective, and that on or upon is no case at all. In that event there would be only five cases, for the vocative seems wanting.

To form the plural it is merely required to supply the word phúr or galai in Bodo and Dhimál respectively, between the noun and the post-position.

All nouns substantive are declined according to the following example:—

English.	*Bodo.*	*Dhimál.*
N. A man,	Híwá,	Wával,
G. Of a man,	Híwáni,	Wával ko.
D. To a man,	Híwá no,	Wával éng,
Ac. A man,	Híwá kho,	Wával éng,
? On a man,	Híwá chou,	Wával ko rhúto,
Voc. O man!	Caret?	Caret?
Ab. From a man,	Híwáni phrá,	Wával sho,
Ins. By a man,	Híwá jong,	Wával dong.
Loc. In a man,	Híwá há or ou or nou,	Wával tá.
Comp. With a man,	Híwá lago,	Wával dosa.

Plural, híwá phúr, híwá phúr ni, &c., in Bodo; and in Dhimál, wával galai, wával galai ko, &c., as in the singular. Thus it appears that in Bodo *ni* is the sign of the genitive, *no* of the dative, *kho* of the objective, *chou* of the anonymous, *phrá* of the ablative, *jong* of the instrumental, *há* or *ou* or *nou* of the locative, and *lago* of the companionative; and that in Dhimál *ko, éng, éng, rhúto, sho, dong, tá,* and *dosa* are their equivalents. Number.

In Latin and other languages, prepositions govern a variety of cases. Post-positions are the equivalents of this part of speech in Eastern tongues and in the above declension. It appears that the Bodo phrá, equal to the Latin ab, and the Dhimál rhúto, equal to the Latin supra, govern the genitive, that is, require the sign of the genitive, even while occupying the place of the ablative in declensions. This is an anomaly, going far perhaps to prove that phrá and rhúto are not truly signs of case or declension, but rather post-positions in the

general sense (like some of the others perhaps), that is, *not* signs of declension.

Adjectives.

Adjectives in both these languages precede or follow the substantives, with all the simple directness of English and with no more effect on the grammatical structure; thus in Bodo, an

Nouns, substantive and adjective, of the simple forms abound in both languages, and both tongues are miserably deficient in abstract forms, whether derivative or primitive, such as childhood from child, greatness from great, and sex, age, &c. So nearly all compounds are wanting in these tongues, that is, that vast class of words which in Greek, Latin, and Sanskrit are formed either from a noun or verb compounded with privative, intensitive, qualitative, aggregative or disjunctive particles, or from two nouns or a noun and verb mixed; anarchy, astronomy, agriculture, nirvritti, pravritti, dwibháshya, vibritásih, hémáchal. Such words, as a class of terms, are wanting, though the means of forming them are forthcoming, and used to a small extent. These are points however which will be best explained by consulting the copious and carefully-constructed Vocabulary. Ellipsis is carried to a great extent, both as to nouns and verbs, sometimes with, sometimes without, the sanction of concurring vowels, and often in excess of what that

sanction would cover where it exists. Long-tailed words or sesquepedalians nor Horace nor Frere ever abhorred more heartily than do these simple races of men; and when three even short words come together without a verb, one of them, the central, is almost sure to be lopt and to lose the first syllable of a dissyllable; thus, taller than all, boinobo *jou* shin, for *gajou* shin, in Bodo;

1 2 3 3 1 2

and in Dhimál, *tai bééng* for *taiko béval éng*, to his own wife. Similar ellipsis takes place constantly among the verbs, especially in Dhimál, as hánká for hadéängká, 'I will go;' jenká for jéängká, 'I will be.'

There are verbal nouns both in Bodo and Dhimál, substantives formed from the root or imperative, and adjectives from the participle. There is likewise a very useful *privative* of general application in each of these tongues, which is the word géyá of the Bodo, and mánthó or mánthúka of the Dhimál. Ongá in the former tongue (yonga if a vowel precede it) has likewise a similar function, but of less currency; and this language has, further, a *possessive* of much value, called gonáng. All these are post-fixes, and separately viewed are adverbs rather than nouns; but in composition they form adjectives from substantives, and perhaps also one class of substantives from another; thus, from dhon, 'wealth,' we have dhongéyá or dhon mánthúka, 'poor, void of wealth,' respectively in Bodo and Dhimál; and, in the former tongue, from rai speech (from speak!) we have ráïnóngá or raiyongá, 'dumb,' 'speechless:' also dhongonáng, 'wealthy, possessed of 'wealth.' Again, from dharam, justice, we have dharam-géyá vel mánthúka, 'unjust' and 'injustice'? and also, in Bodo, dharamgonáng, 'just.' I am not aware that adjectives in either language are ever transmuted into adverbs, as evly from evil, haughtily from haughty. Nor have I met with any instance of a diminutive, or the means of forming one, in either tongue.

I should add, before quitting the subject of nouns, that the Bodo attempt to form abstract nouns from the simple ones by means of the post-fixes matno, sló, and blá, with a slight change of the termination of the primitive word, and that

they even affirm that of these post-fixes matno belongs more properly to things, sló and blá to beings. Thus, from gajou, 'tall,' is formed gajówan matno, 'tallness;' from majáng, 'handsome,' majángan matno, 'beauty;' from gotho, 'child,' gothobla or sló, 'childhood;' from gédét, 'great,' gédét nan-matno, 'greatness.' More samples of this formation may be seen in the Vocabulary, wherein however I have left most of the abstract nouns blanks, from doubts as to the authenticity of this method of filling those blanks; abstracts are very puzzling, yet it is indispensable to test the fact of their absence at all events. The Dhimáls make no attempt to form them, but fairly avow their unqualified astonishment that anybody should seek for such strange and useless words!

Comparison.

There are no distinct words in either of these tongues expressive of the degrees of comparison, like agathos, arión, aristos, bonus, melior, optimus; 'good,' 'better,' 'best:' nor any incrementory particles serving to the same end, such as the Sanscrit 'tar, tam;' the English 'er' and 'est,' and the Latin 'or' and 'ssimus.'

The comparative and superlative degrees are formed in Bodo and in Dhimál as in Hindí and U'rdú, by words expressive of 'than that,' 'than all,' binbo shin and boinoboshin in Bodo, and oko nhádong, sogiming ko nhádong in Dhimál, according to the following example.

		English.	*Bodo.*	*Dhimál.*
Human beings.		*Tall,*	Gajou,	Dhángá.
		Taller,	Binbo gajou shin,	O'kó nhádong dhángá.
		Tallest,	Boinobo gajou shin.	Sogiming ko nhádong dhángá, or dhángá saika.
		Short,	Gahai,	Bángrá.
		Shorter,	Binbo gahai shin,	O'kónhádóng bángra.
		Shortest,	Boinobo gahai shin or sin,	Báugrá saika.

In the above examples Binbo is compounded of the inflected form of the word Bi, 'him, it, that,' and of the euphonic particle bó. Shin or sin is 'than.' Boinobo is compounded of the word boino 'all' and bó, 'as before.' In the Dhimál series oko is the inflected form of wá, 'him' or 'that' or 'it.' Nhádong is the indeclinable 'than.' Sogiming is 'all,' an adjective, and saika, I believe, an adverb equivalent to 'very,' 'most,' or the

magis vel maxime of Latin. It will be seen that in the Bodo idiom the literal style is 'that or it great than' for the comparative, and 'all great than' for the superlative, whereas in Dhimál the Hindi and Urdú idiom is followed, 'that than great'—'all than great.' I have already adverted to the elliptical manner of speech so popular with these races. In the above examples the Bodo constantly, almost invariably, drop the middle syllable of boinobo and the first syllable of gajou and of gahai. And in like manner, the Dhimál sink the second syllable of nhádong, and the middle syllable of sogiming. If my conjecture as to the Dhimál saika be correct, we shall have in one form of the Dhimál superlative a nearly exact equivalent of the English and Latin idiom very pious, most pious, magis pius, maxime pius, except that the adverb *follows* the adjective in Dhimál.

Pronouns.

The personal, possessive, demonstrative, relative, distributive, and reflective or egoïstic (self*) pronouns will be all found in the Vocabulary. The declension of the pronouns seems to be the least imperfect part of the structure of the Bodo and Dhimál tongues, and in the latter exhibits throughout marks of genuine inflection. The regimen is the same as that for the declension of nouns; but, as I have given the latter curtly, I will, at the risk of being tedious, give the declension of the pronouns more fully.

Gender affects it not: the numbers are two; the cases nine, as before.

Possessive Pronouns, &c.

Possessive pronouns precede their nouns. Possessive and relative pronouns are seldom employed in the inflected forms

of the personals, though these forms are common to both. Of the use of the relatives in any form the Bódo and Dhimál are very shy. Indeed, I doubt if their languages have any such words, though I have set down in the Vocabulary the evidently borrowed and seemingly perverted terms of others, and the misapplied ones of their own.

The interrogative pronouns 'who' and 'what,' they have, viz., Chúr and Má in Bódo, Háshú and Hai in Dhimál. These pronouns are declined after the general model of the personal ones.

Demonstrative Pronouns.

As has been noticed, they serve for articles. Imbé is 'this,' and Hóbé 'that,' in Bódo; and in Dhimal *í* and *ú*, or, more formally, ídong, údong for 'beings,' ítá, útá for 'things.' Íbal, Úbal, signifying 'these' and 'those' in Dhimál, are considered the most express equivalents of the Bódo imbéchúr and hóbéchúr. Thus a good deal of difference is established between the third personal pronoun and the demonstratives, though ibál of the Dhimál is evidently but the correlative of the personal pronoun Úbal.* I proceed to exhibit the declension of the proximate demonstrative.

	Singular.	
This,	Imbé,	I'.
Of this,	Imbé ni,	I'ko, Yángko.
To this,	Imbé no,	Yéng.
This,	Imbé kho,	Yéng.
Oh this!	Caret?	Caret?
In this,	Imbé há, ou, nou,	Yáng tá.
On this,	Imbéni chou,	Yángko rhútá.
From this,	Imbéni phrá,	Yáng sho.
By this,	Imbéni jong,	Yáng dong.
With this,	Imbéni lago,	Yáng dosa.
	Plural.	
These,	Imbé chúr,	I'bal.
Of these,	Imbé chúrni,	Ibal ko.
To these,	Imbé chúr no,	Ibal éng.
These,	Imbé chúr kho,	Ibal éng.
Oh these!	Caret?	Caret?

* The demonstrative *ú* and the personal *wá* are probably the same word radically, Wá being but a vulgar pronunciation of U' vel Voh. The absence of an express third personal is so common in all languages that Smidt wittily observes—"I am No. 1, you are No. 2, and all others are nothing at all; that fellow or this, to wit, Ille, Iste."

In these,	Imbéchúr há, ou, nou,	Ibal tá.
On these,	Imbéchúrni chou,	Ibal ko rhúta.
From these,	Imbéchúrni phrá,	Ibal sho.
By these,	Imbéchúr jong,	Ibal dong.
With these,	Imbéchúr lago,	Ibal dosa.

Itá makes itáng and útá, útáng, in the dative singular; for the rest, these words, as well as idong, údong, are declined without change by means of the universal post-positions. So also the Bódo Hóbé, plural hobéchúr, follows the model of Imbé.

There are two great peculiarities in the use of the pronouns in these tongues; one is, that in both languages the pronouns frequently stand as the last word in the sentence, and this whether they be personal or possessive. The other peculiarity is confined to the Dhimái, and consists in the reduplication of the first and second persons* plural (we-ye) thus, from hinli, 'to laugh,' we have kyél hin *kyél*, 'we laughed,' nyél hin *nyél*, 'ye laughed.' Ubal hin, 'they laughed,' ceases to exhibit this characteristic mark. The possessive pronoun sometimes follows the governing noun, not usually. It will be observed from the above examples that the plural in most Bodo pronouns, and in many Dhimál ones, is formed by the respective postfixes chúr and bal. These are further distinctions between the declensions of the nouns and pronouns of these tongues.

Numeration.

The cardinal numbers extend only to 7 or 8 in Bódo, to 10 in Dhimál. Beyond these numbers the method of reckoning common to both people is by the Indian ganda and bísa, thus, 5 gandas are = 1 bisa or score, and 2 bisa = 40, 5 bísá = 100, and thus they contrive to reach the ne plus ultra of 200 or ten score. There are no ordinals in either tongue. The cardinal series is evidently the same in both tongues, and is derived from Tibet—the only instance of the kind I have noticed in their languages,† but I have not yet gone into comparisons of this sort, nor purpose to do so till I have

* Singular also. See on.

† 10 of the 60 words in Brown's List are identical in Dhimál and Tibetan; one in Bodo and Tibetan; 15 in Bodo and Gáró.

completed the whole contemplated series of Vocabularies for the Hills and Tarai, from the Bramapútra to the Káli or Ghágrá.

The following is the cardinal series of numbers, stript of their affixes.

English.	*Bódo.*	*Dhimál.*
One,	Ché,	E.
Two,	Gné,	Gné.
Three,	Thám,	Súm.
Four,	Bré,	Diä.
Five,	Bá,	Ná.
Six,	Dó,	Tú.
Seven,	Sini,	Nhïï.
Eight,	...	Yé.
Nine,	...	Kúbá.
Ten,	...	Té.

To these the Bódo *prefix* the particles San or Sá, Man or Má, and Thai, according as human beings, other animals and things, or money, are in question. The numeral, with these affixes, may either precede or follow the noun. Thus, Bihi sáché, one wife; Híwá sanché, one man; Búrmá máché, one goat; Tháka thai ché, one rupee;* Chokai manthám ménda, 12 sheep or 3 gandas of sheep.

The Dhimáls, again, have an immutable *postfix*, which is the word long, void of meaning like the Bódo prefixes. Thus *é* long is one, *gné* long two. This postfix is often omitted, as well as part of the noun to which the numeral is attached, with that love of ellipsis that has been already remarked on. Thus one day is properly *é* long nhítima; but the Dhimáls content themselves usually with Enhí. One man is Edíáng or Élong díáng; and thus it appears that in Dhimál the numeral always precedes the substantive. In Bódo, on the contrary, the numeral follows it or precedes it; generally the former.

* Chokai Vel Jokai, so Dou Vel Tou and Gorai Vel Korai. The mutation is no doubt euphonic and systematic, though the people are not aware of this, and generally prefer the harsher letters, I must say. The harsh sounds therefore are probably the more normal and appropriate. Thus Korai and not Gorai is the genuine Bódo commutative of the Hindi and Urdu Ghóra.

The Verb.

Verbs express being, possession, or action. Those of the two former classes are very rare, or wholly wanting, in Bodo and in Dhimál. Those of the third class, if they belong to the primitive or simple type, are abundant. Verbs are divided by Grammarians into the active and passive, the transitive and intransitive or neuter, the personal and impersonal, the regular and irregular, the entire and defective, the compound and simple, the auxiliary and primary. Of these kinds, passives are formed in Bódo by means of the perfect auxiliary verb to be (jáano) added to the root of the primary, which root is the imperative, second person singular. In Dhimál there is no passive voice, though there is a past participle (nay, two) attached to the active voice, and in constant use as an adjective. A substitute for the passive voice is attempted to be found by the Dhimáls in a manner analogous to the Úrdú and Hindi idiom, according to which a man less frequently says, 'I have been beaten by my brother,' than 'I have *eaten a beating* from my brother,' Bhaí sé már kháyá. So the Dhimál says yollasho dánghai nénchákiká. But the parallel is not complete, for nénchákiká is a compound, made up of nénli, to find, and cháli, to eat, so that the Dhimál idiom, literally rendered, is, 'I have found and eaten a beating from my brother.' Transitive and neuter verbs are, of course, common to both tongues; but neither, nor perhaps any language in the world, possesses the Úrdú and Hindí facility of transmuting the latter into the former, as úthná, úthánā; chalna chalána, samajhná, samjhána, &c., *ad infinitum*. The only contrivance of this sort known to the Bodo and Dhimál languages is the compounding of the verb hotno, to give, in Bódo, and of the verb páli, to do, in Dhimál, with the root of the neuter verb, which it is proposed to make active; thus from hángno, to begin, n, comes háng hotno, to begin a, and from mholili n, mhoi páli; a in Bódo and Dhimál respectively. In Bódo, japno, to be finished, is made active by prefixing the imperative of the verb to do, thus moujapno. Of impersonal verbs I have nothing to say. Of reflected or

deponent verbs I have found no trace. Verbs in general are very regularly conjugated according to *one* regimen, irregular verbs being rare in Bódo, and rarer in Dhimál. Jéngli, to be, is an irregular in Dhimál, as in so many other tongues. I scarcely know another instance in Dhimál; but in Bódo hotno, to give, hääno, to be able, phoino, to come, with some others, are irregular in one or more tenses. Of defective or fragmentary verbs, the Bódo auxiliary dong and dongman, equivalent, I apprehend, to the hún and thá of Úrdú and the hou and bhayou of Hindi, and the Dhimál auxiliaries, khíka, híká, and ángká, fragments of verbs of similar meaning with dongman, are samples. Compound verbs other than those already spoken of, whereby neuters are made active, are very rare, as I have already hinted under the head of nouns. Wherever they exist they are formed in the manner of neuters made active. The auxiliary verbs have been already mentioned, in part, as defectives. To those there spoken of we must here add the Bódo regular and perfect verb jääno, to be, which is of the highest value, as the sole means of forming the passive voice, by postfixing its various inflections to the root of the primary verb in the active voice *Per se*, it is little used, the Bódo (and Dhimál) seeming to think that talk of mere existence is neither very profitable nor very intelligible. The Dhimál auxiliaries, khika, mhika, nhika, hika, ángká, are of the last importance, as forming the sole means of conjugating all verbs. From much inquiry through the medium of multiplied sentences—not of direct questions, which I found wholly futile and worse—I infer that the three first of the above five words are really one and the same, only varied for the sake of euphony, but upon principles too subtile for ready detection by a stranger; that all the three represent the *present* tense, indicative mood, of the fragmentary verb to be or to do;* that hika, the fourth word, represents the *past* tense of the same or a similar verb; and that ángká, the fifth word, stands in like manner for the *future* tense. These words are modified by genuine inflection,†

* Take the style of English conjugation as a help to appreciate this peculiarity, I do love, I did love, I will love.

† Is this inflection, after all, nothing more than the reduplicated pronoun

to suit the persons of the singular number, and the whole may be tabularised thus:—

SINGULAR.

1st. person, Ká khika : Ká mhika : Ká nhika : Ká hika : Ká ángká.
2d. person, Ná khina : Ná mhina : Ná nhina : Ná hina : Ná ángna.
3d. person, Wá khí : Wá mhí : Wá nhí : Wa hí : Waáng.

PLURAL.

1st. person, Kyél khi kyel :* K. mhi k : K. nhi k : K. hí k : K. áng k.
2d. person, Nyel khí nyel : N. mhi n : N. nhi n : N. hí n : N. áng n.
3d. person, Ubal khí : Ubal mhi : Ubal nhí : Ubal hí : Ubal áng.

The three first of these are apparently equivalent to the English verbal signs, 'do,' 'am;' the next to 'did,' 'was,' 'have,' 'had;' the last to 'shall,' 'will.' The student will find these remarks a key to the whole process of conjugation in Dhimál verbs. He has only to prefix the root of the verbs he wishes to conjugate to the above auxiliaries, and he at once obtains all of conjugation that the language exhibits; for the imperative or root, the infinitive and the participles, have, each and all, a single and inflexible form.

Should the conjecture hazarded in the foot-note of the last page prove well founded—and there seems every probability of its proving so—a very singular state of things would be the result; for we should then have the whole process of conjugation of Dhimál verbs accomplished by affixing an invariable auxiliary verb or verbal particle (viz., khí or hí or áng) to the root of the primary verb, with reduplication of the first and second pronouns, both singular and plural. Whether that particle or verbal fragment be really one or three, and whether significant or meaningless, are doubts which higher grammatical skill than I can pretend to, may go far to settle.† The people use their language with extreme carelessness, even in regard to those grand distinctions of time, the past, the present, and the future; and

added to the root, after the manner of the plural? Bopp says all personal inflection was originally pronominal, and Bunsen in his Egypt gives us samples from the oldest language on earth of pronouns used indifferently either as independent prefixes or as servile postfixes.

* The double pronoun is marked by its initial letter only, to save space.

† I am now satisfied that these so-called particles are fragmentary verbs like thá in Udú, and bhaya in Hindi, or 'do,' 'did,' 'will do' in English. 'Must,' 'ought,' &c., being invariable in form, are yet nearer approximations.

though I have stated, as the result of much investigation, that khí denotes 'the present,' hí 'the past,' and áng 'the future,' I cannot deny that I have often found the whole three employed promiscuously. Possibly, therefore, the three may prove to be only one, and even to have some connection with the perfect verb jéngli, to be analogous to that which seems to conjoin the fragmentary verb hún, thá, hou, bhayou, with the perfect verb hóná. Hí is often employed in the sense of the Úrdú hai, 'is;' as, for example, 'who is there?' Háshú[1] hi,[2] exactly equivalent to kón[1] hai[2]? rather kón thá? in the past tense. 'Who was it?' as if he were gone.* And though hí may be alleged to be a contraction of jéhi, which is deduced regularly from the perfect verb jéngli, 'to be,' yet, on the other hand, I see not any necessity for excluding the conjecture of an affiliated fragmentary verb consisting of hí solely, and khí and áng may possibly be of the same nature. That mhí and nhí are euphonic variations merely of khí I have no doubt whatever. Under the head of compound verbs I ought to have observed, that in Bódo such as express repetition or reiteration have the reiterative adverb placed in the *centre* of the *verb*, between its radical and inflected portions; thus, phoino, 'to come;' phoi-*phin*-no, 'to come *again*;' and that both in Bódo and Dhimál there is a useful set of quasi-compound verbs formed, as in Úrdú and Hindi, by verbs equivalent to their chukná and lagná. These are in Bódo, khángnó and lángnó; in Dhimál, hóïli and téngli. But whereas in the former tongues these accessary verbs are added sometimes to the imperative and sometimes to the infinitive of the primary verb (márchúka, honé laga), in the latter languages they are subjoined solely to the imperative, which in all four languages alike is likewise a verbal noun.

In most cultivated tongues there are several regimens for the conjugation of verbs, and under each regimen or model are comprised a great variety of moods and tenses, all which,

* The past tense is invariably used whenever the act is, or seems to be, over and passed.

as well as the numbers and persons of each tense, work changes upon the radical form of the verb, whether by inflective or auxiliary increment.

In Bódo and Dhimál there is apparently but one regimen for the conjugation of all verbs, which is accomplished by means of inflection in Bódo, of auxiliaries (immutable, verbal fragments) in Dhimál. This regimen exhibits great simplicity in both tongues, there being but three moods, the imperative, the infinitive, and the indicative,* and the last only admitting of a variety of tenses, which are limited to three, or, the absolute present, the absolute past, and the absolute or simple future. If a Bódo would express the time of the action with greater precision, he obtains an imperfect present by means of the auxiliary dong (thus, mou, 'do'; moudong, 'I am doing'); an imperfect past by means of dongman (thus, mou dongman, 'I was doing'); an emphatic past by means of the separate verb kháng no, 'to be ended' (thus, mou, kar, kháng bai, chúka, 'I have,' 'it is,' 'entirely done'); or else he marks decisively the three grand divisions of time, or any one of them, by *pre*fixing an adverb of time (dáno, 'now,' 'this instant'; sigáng, 'previously,' 'in the past'; yúnó, 'afterwards,' 'in the future'). Of these methods of marking time with precision, the last alone appears to be available to the Dhimáls, although the careless manner in which they employ their sole conjugational index of time (khika, hika, and ángká, supposed to represent respectively the 'present,' 'past,' and 'future') would seem to render further expedients more needful to them than they are to the Bódo. The Dhimál adverbs of time, corresponding to the Bódo ones just given, are éláng, lámpáng, and nhúcho respectively, and these likewise are placed before the verb as in the Bódo tongue. In Dhimál there is no passive voice; in Bódo the passive is formed precisely as in English; thus, shúno, 'to strike'; shú jááno, 'to be struck.' In Bódo, however, the auxiliary follows instead of going before the primary verb. There are two numbers, and three

* There are vague traces of a subjunctive mood in Mecch, formed by the postfix blá; thus, 'if I should go,' áng tháng blá. But in general the future indicative denotes contingency. 'Power' and 'will' are denoted by separate verbs, and 'duty' also.

persons in each number, both in Bódo and Dhimál. In Bódo number and person have no effect upon the verb, nor in Dhimál either, if, as conjectured, the second syllable of the Dhimál auxiliaries (khi*ká*, khi*ná*, khi, *et sic de cæteris*) be reduplicated pronouns, and not inflections. The imperative mood has but one tense and one *person* in both tongues, viz., the second person singular; and to this the negative is prefixed (dá in Bódo, má in Dhimál). In Bódo this proper verbal negative (mat in Úrdú) is nearly confined in its use to the imperative. In Dhimál it is as constantly applied to the infinitive, thus creating a very useful class of contrasted verbs (dóángli, 'to be able'; má dóángli, 'not to be able'; kháng*li*, *velle*, 'to will'; má kháng*li* *nolle*, 'not to will' or 'wish'). This function is discharged in Bódo by the general primitive géyá, contracted to gai, and put as usual between the radical and inflected part of the verb (hääno, 'to be able'; hää*gai*no, 'to be *un*able'). This contrasted negative is likewise universally obtained in Bódo verbs by varying merely the terminal vowel, whether simple or diphthong ('Do you go or not?' Thango*ná* thang*á?* 'Will you go or not go?' Thángn*ai* ná tháng*á?*). The infinitive mood has only a present tense, and there is nothing more analogous to gerund or supine than the three participles, viz., a present, a past, and a remote past, the extensive use of which in lieu of conjunctions and of relative pronouns is very characteristic of both tongues. The root of the verb, as already frequently noted, is the imperative, and it is peculiar to these tongues that they form all tenses and compounds from it, and seldom or never from the participles or infinitive. From this root, in Bódo, the present tense (indicative) is formed by adding ó (go, if a vowel precede) for all the persons of both numbers; the past by á (yá, if a vowel precede) or bai; the future by nai; the infinitive by nó; the present participle by in, the past participle (like the past tense) by á (yá, if a vowel go before); and the remote past participle by náné.*

In Dhimál the inflective increments, as above enumerated, are either khí, impersonal, or khika, khina, khi for the three

* This last is equivalent to the kar ké of Urdú, aptly called the conjunctive participle.

persons; hí, impersonal, or hika, hina, hí; áng, impersonal, or ángká, ángná, áng; lí, katang, ká, téng.

The passive voice in Bódo is conjugated precisely as is the active, while in Dhimál there is no such thing as passive voice. In neither tongue is there anything like honorific tenses or phrases of any sort. We may now conclude the subject of verbs with some samples of conjugation.

Indeclinables.

These highly useful parts of speech which give precision to all the others, whilst they connect them into well-knit sentences, are sadly deficient in the Bódo and Dhimál languages. Here more than any where, and almost only, I trace evidence of systematic borrowing and very clumsy assimilation. For the adverbs of place, time, quantity, quality, mode, and for the conjunctions the Vocabulary must be consulted; nor is there anything needful to be added in this place. Conjunctions of pure or unborrowed character are very rare * both in Bódo and Dhimál, and this circumstance, together with the habitual neglect of those post-positions which denote the cases of nouns, causes the sentences to hang very loosely together. Euphony, however, is studied, and the euphonic particles, which are the chief links of the construction, may be properly regarded as conjunctions. In Bódo the chief ones are, bo, no, ná, á, yá, má. All are postfixes and insignificant, except the last, which has an intensitive sense, as hágrá, 'a jungle,' hágrá má, 'a great jungle or forest.' In Dhimál there are fewer of these euphonic links of sentences, and indeed I remember distinctly but one, which is sá, and is void of meaning. Prepositions

* The want is cleverly evaded by means of the participles, à la Turque.

in these languages, as in others, govern various cases, of which some examples have been given, and more may be drawn from the subjoined sentences. Adverbs generally precede, but sometimes follow, the verb or nouns whose sense they qualify, and in close juxtaposition to which they are always found. I have met with no method of converting adjectives into adverbs, and this may account in part for the poorness of these tongues in indeclinables. Participles perform the function of conjunctions, as in Turki.

Sentences illustrative of the above rules of grammar and of the construction of the Bódo and Dhimál languages:—

Yesterday I went to the forest to cut timber. To-day I am going to the jungle, to cut grass; and to-morrow I shall go to the village, to choose a fit site for building a house on.

Construction.

I know not that anything need be added to the copious and careful particulars, the statement of which is just concluded. It has been my object to make that statement *perfectly adequate to the ends in view*, or a full illustration of these peoples as they are in themselves, and as they are in relation to one another, and to the larger group to which they belong.

A few concluding remarks may, however, be expected from me; but to avoid useless repetition I must glance at the whole group of tongues which I purpose to examine. It has been already observed that the Bódo and Dhimál languages belong pretty evidently to the aboriginal Indian tongues of the pronomenalised type.† They seem to me to have retained to a remarkable degree their primitive character, so as

* The participle is used all along to avoid the conjunction. There is not one exception to this rule.

† See note at Part III., p. 105.

to constitute very valuable exemplars of the class of languages to which they belong; nor have I any doubt that further time would have enabled me to replace many of the Úrdúi or Hindí vocables to be found in the Vocabularies with others of indigenous stock. Such exotic words are surprisingly few, considering how long the Bódo and Dhimál people have lived in peaceful intercourse with the people of the plains on the one hand, and of the hills on the other; and, what is still more singular, is the broad distinction between the Bódo and Dhimál tongues as compared with one another, seeing that these people have lived for several generations, if not actually mixed (for their villages are separate, nor do they intermarry), yet in the closest apposition and intercourse. That the Kócch were originally an affiliated race, very closely connected with the Bódo and entirely distinct from the Hindus (Arian immigrant population using the Prákrits), I have no hesitation in saying. But since the beginning of the sixteenth century of our era, the Kócch have very generally abandoned their own in favour of the Hindu (and Moslem) speech and customs, though there be still a small section called Páni or Bábú Kócch retaining them. I failed to obtain access to the Páni Kócch, so that my Kócch Vocabulary exhibits little more than a mass of corrupted Prákrits. There are, however, some primitive vocables; and the Vocabulary, such as it is, has been taken in order to preserve a living sample (soon to disappear) of that process whereby the Arian and exotic are rapidly absorbing the non-Arian and indigenous tongues of India—tongues (the latter) which, if we make a general inference from the state of things in the hilly and jungly districts, wherein alone they are now found, must have been prodigiously numerous, when they prevailed over the whole face of the land; *unless*, indeed, the dispersion and segregation in holes and corners of the aboriginal population have given rise to that Babel of tongues which we now find.

Hill tribes. In the sub-Himálayas, between the Káli and the Tishta rivers, I know of the following aboriginal tongues and dialects: *—The Cisnivean-Bhótia, the Thaksia, the Pakia, the

* For a fuller enumeration see Trübner's reprint of my papers at pp. 13, 14, and 29, 30. See also papers on "The Broken Tribes," and on "The Vayu and Bahing," in J. A. S. of Bengal for 1857.

Sunwar, the Magar, the Gúrúng; the Múrmi, the Néwári, the Kíránti, the Limbú, the Lapchá, the Haiyú or Vayu, the Chépáng, the Kúsúndá, the Dénwár, the Dúrré, the Brámhú; the above in the hills. In the Tarai, extending our limits easterly to Assam, so as to include its south-west skirt, the Kócch, Dhimál, Rábhá, Gáró, Khyi or Khasia, Kachári or Mecch, or Bódo, Hájóng, Kúdi, Batar or Bor, Gangai, Kíchak, Kuswar, Thárú, Kébrat, Pallah, Amath, Maraha, Dhamúk, Dhékrá, besides those of hill-tribes located there long ago, and now very different from their confreres of the hills, such as Sringia Limbús, Dénwárs, Dúrrés, &c. What a wonderful superfluity of speech! and what a demonstration of the impediments to general intercourse characterising the earlier stages of our social progression! How far these languages, though now mutually unintelligible to those who use them, be really distinct, how far any common link may exist between them and the rest of the aboriginal tongues of India —so as to justify the application of the single name Tamulian to them all—are questions which I hope to supply large means of answering, when I have gone through the hill and Tarai tongues of this frontier, as above enumerated. Be these points as they may, the Bódo and Dhimál tongues will be, I think, allowed to be genuine and highly-interesting samples of the aboriginal languages of the plains of India (whatever their source or connection, matters to be settled hereafter), as well as to furnish a good key to the moral and physical condition of the simple races using those tongues. What can be more striking, for example, than agriculture being expressed by the term 'felling' or 'clearing the forest;' than the total absence of any term for 'village,'* for 'plough,' for 'horse,' for 'money' of any kind; for nearly every operation of the intellect or will, whether virtuous or vicious; and, lastly, for almost every abstract idea, whether material or immaterial? Structurally viewed, these languages are distinguished by a frequent absence of inversion that is unwonted in Indian tongues;† by the peculiar use of the pronouns, particularly in Dhimál; by the special form and uses of the

* Arva in annos mutant et superat ager! See on.

† As will be seen, the *usual* structure of sentences is like that of Hindi and

privatives: by the loose cohesion of the sentences, resulting from a want of, and a contempt for, conjunctions, as well as a neglect of the signs of case and tense; by the conjunctive application of the participles; * by a want of precision arising from the paucity of adverbs, and also from the features just marked; by a passion for ellipsis, yet an attention to euphony; by extreme simplicity of structure; and, lastly, by the universal and exclusive use, in Dhimál, of fragmentary auxiliars in the business of conjugation.

Adam Smith long ago remarked, that original languages might be known from derivative ones, by those auxiliars and prepositions of the latter, whereby the complex inflections of the former are got rid of. It would be practically very convenient if we had any certain marks of this sort, serving to distinguish those two classes of languages; but it is difficult to suppose the Bódo and Dhimál languages other than primitive; and yet if they *be* primitive, Smith's deduction from the languages of Europe cannot be allowed to have general validity.

Urdú; but, as already remarked, it must be borne in mind that the Urdú and Hindi medium of questioning should be allowed for as necessarily influencing the responses, which *therefore*, perhaps, exhibit too much inversion!

* In lieu both of relative pronouns and of conjunctions, thus, instead of 'go and bring,' we have 'going, bring,' and instead of 'he who brings,' 'he bringing.'

In the Vocabulary words will be found for most of these things and ideas; but they are all *borrowed* terms, the nature and sources of which the Indian reader will readily recognise, and see how clumsily and imperfectly they have been incorporated when any attempt at assimilation is made.

PART III.

ORIGIN, LOCATION, NUMBERS, CREED, CUSTOMS, CHARACTER AND CONDITION OF THE KÓCCH, BÓDO, AND DHIMÁL PEOPLE, WITH A GENERAL DESCRIPTION OF THE CLIMATE THEY DWELL IN.

If we commence our researches into the aboriginal tongues and races of India in its north-east corner, or Assam, we find that province rich in such materials for inquiry. But the majority of the numerous aborigines of the mountains of Assam appear to belong to the simpler-tongued or Tibetan stem,* with which we have at present nothing to do. A line drawn north and south across the Brahmapútra, in the general direction of the Dhansri river, and continued southwards so as to leave Káchár within it or to the west of it, would seem not very inaccurately to divide the simpler from the more complex-tongued section of the Himalayan races. Possibly, indeed, some of the hill tribes to the north of the Brahmapútra, although within the limits of the former section, as above conjecturally defined, may yet be found to belong to the latter;† but to the south of that river, I think it is pretty evident that such is not the case, for the Káchárians, Khasias, and Gárós, are, in creed, customs, and languages, either identical with, or most closely affined to, the Bódo, while the Kúḍi, Rábhá, and Hájóng, if not rather nominal than real distinctions (Hajong, Hojai Kachari), are but branches of the great Bódo or Mécch family, whose

* I divide the Himalayan races primarily into two groups, distinguished by the respective use of simple or non-pronomenalised, and of complex or pronomenalised languages.

† In the Northern Hills also the Dhansri seems to demark the Alpine races of Tibetan origin (ending easterly with the Lhopa or Bhutanese) from the Daphlas, Akas, Bors, Abors, Mishmis, Miris, and others of apparently Chinese or Indo-Chinese stock.

proper habitat, be it remembered, is the plains and not the mountains. I should add that it is a mistake to suppose the mass of the population in the *valley* of Assam to be of Arian race. I allude to the Dhékrás or common cultivators of the valley, who, as well as the Kácháris and Kócch of that valley, are non-Arians, as is proved beyond a doubt by their physical attributes, and in despite of that Bengálí disguise of speech and customs which has misled superficial observers. The illustration of these Assamese races is, however, I believe, in better hands than mine; and I therefore shall proceed for the present more westward. Whoso should advance from Góálpára in Assam to Aliganj in Morang would, in traversing a distance of some 150 miles along the skirts of the mountains of Bhútán* and Sikim, pass through the country of the following aborigines of non-Arian extraction: the Kócch, the Bódo, the Dhimál, the Rábhá, the Hájong, the Kúḍi, the Batar or Bor, Kébrat, Pallah, Gangai, Maráha, and Dhanuk, not again to mention the Kachárians separately, they being demonstrably identical with the Bódo, and so in future to be regarded, nor further dwelling now on the Khasias and Gáros than to observe that Buchanan notes them as parts of the population of Rangpúr in its old extent.† We may have more to say of the rest of these tribes hereafter. Many of them have abandoned wholly their own tongues and a deal of their own manners. But our present business is with the Kócch, Bódo, and Dhimál, and first with the first.

Kócch Location.

In the northern part of Bengal, towards Dálimkót, appears to have been long located the most numerous and powerful people of non-Arian extraction on this side the Ganges, and the only one which, after the complete ascendancy of the Arians had been established, was able to retain or recover

* Bhútán recte Bhutant, 'the end of Bhót,' Sanskrit name of the country, which the people themselves call Lhó, but, like the Hindus, consider it an appendage of Bhot *v.* Tibet, of which the former is the Sanskrit and the latter the Persian designation. The native one is Bód.

† Fifteen in sixty words of Brown's Vocabulary are the same in Gáró and in Mécch, and the whole sixty or nearly so in Kachári and Mécch. Again, the Kachári called *themselves* Bódo, and so do the Mécch; and, lastly, the Kachári deities, Sijú, Mairong, and Agráng, are likewise Mécch deities—the chief ones too of both people, to whom I restore their proper names. These are abundant proofs of common origin of Górós also.

political power or possession of the open plains. What may have been the condition of the Kócch in the palmy days of Hinduism cannot now be ascertained; but it is certain that after the Moslem had taken place of the Hindu suzerainty, this people became so important that Abul Fazul could state Bengal as being "bounded on the north by the kingdom of Kócch, which," he adds, "includes Kámrúp." Hájo founded this kingdom towards the close of the fifteenth century or beginning of the sixteenth, and it was retained by his sovereign successors for nearly two hundred years.* In 1773 the Company's gigantic power absorbed the Kócch Ráj, which once included the western half of Assam on one side and the eastern half of Mórung on the other, with all the intervening country, reaching east and west from the Dhansri river to the Konki, whilst north and south it stretched from Dálimkót to Ghóraghát. In other words, the Kócch Ráj extended from 88° to 93½° east longitude, and from 25° to 27° north latitude, Kócch Bihar being its metropolis, and its limits being coequal with the famous yet obscure Kámrúp of the Tantras. Hájo's representative still exercises *jura regalia* in that portion of the ancient possessions of the family which is called Nij Bihár, and he and the Jilpaigori and Pángá Rajahs, together with the Bijni and Darang Rajahs, and several of the Lords Marchers of the north frontier of Kámrúp (Barúas of the Dwárs)—all of the same lineage—still hold as Zamindar Rajahs most of the lands between Sikim, Bhútán, and Kámrúp, as at present constituted, and a southern line nearly coincident with the 26° of north latitude. Sukla Dev of the Kócch dynasty divided the kingdom, and there seems to have been in later times a triple Sultanat fixed at Bihar, Rangamati, and Gauhati. The Rajahs of Gauhati and their kinsmen of Darang extended the Kócch dominion eastward to and beyond the Májuli or great island of the Brahmapútra. Hájó, the founder, having no sons, gave his daughter and heiress to a Bódo or Méech chief in marriage; and to the wise policy indicated by this act (the policy of uniting the aborigines and directing their united force against intruders) was the founder of the Kócch dynasty indebted for his suc-

cess against the Moslems, the Bhútánese, and the Assamese.* Nevertheless the successors of Hájó speedily abandoned that policy, casting off the Mécch (Bódo) with scorn, and renouncing the very name of their own country and tribe, with their language, creed, and customs, in favour of those of the Arians, who, however resolutely they may eschew the aborigines whilst continuing obscure and contumacious, never fail to hold out the hand of fellowship to them when they become powerful at once and docile. In a word, Visva Sinh, the conqueror's grandson, with all the people of condition, apostatised to Hinduism; the country was re-named Bihár; the people Rájbansi; so that none but the low and mean of this race could longer tolerate the very name of Kócch, and most of these being refused a decent status under the Hindu regime, yet infected, like their betters, with the disposition to change, very wisely adopted Islám in preference to helot Hinduism. Thus the mass of the Kócch people became Mahomedans, and the higher grades Hindus: both style themselves Rájbansi. A remnant only still endure the name of Kócch, and of these but a portion adheres to the language, creed, and customs of their forefathers—as it were merely to perpetuate a testimony against the apostasy of the rest! The above details are interesting for the light they throw upon the *character and genius of Hinduism*, which is certainly an exclusive system, but not inflexibly so; and whilst it readily admits the powerful to the eminent status of Rajpút vel Kshatriya,† it is prone to tender to the humble and obscure no station above helotism—a narrowness of polity that enabled Buddhism not only to establish itself in the very metropolis of Hinduism (Bihar, Oude, Benares), but for fifteen to sixteen centuries‡ (sixth B.C. to

‡ Sakya was probably born in 545 B.C., and died in 465, and that his creed was still flourishing in the eleventh century A.D. is proved by the then solemn repair of the great temple at Gaya. The persecution, however, was hot in the ninth.

eleventh A.D.) to contest with it the palm of superiority. The Yogini Tantra very properly denominates the Kócch, Mlécchas or aborigines, the fact being imprinted in unquestionable characters on their non-Arian physiognomy, and also on the language and customs of their unconverted brethren. They are called Kavach * in the Tantra just named, Hásá by the Kácháris or Bódos of Assam, Kamál by the Dhimáls, and Kócch by the Mécch or Bódos of the Méchi, as well as by themselves where not perplexed with Brahmanical devises. Buchanan, who was furnished with every appliance for satisfactory research, and whose sagacity was not unworthy of his opportunities, estimated the numbers of the Kócch people twenty-five years ago at 350,000 nearly. I am not aware that any good census has since been taken, and I have failed to obtain a general estimate: but from much inquiry, aided by Major Jenkins, Dr. Campbell, and Permanand Acharj, I conclude that Buchanan missed a great many of them under the disguise of Islám, that cultivation has vastly increased since his time, that the Kócch abound throughout the northern part of Rangpúr, Púrnea, Dinajpúr, Mymansing and in all Kámrúp and Darang, as far as the Dhansri river, and that their numbers cannot be less than 800,000 souls—possibly even a million or million and quarter. In Assam they are divided into Kamthali and Madai or Shara, and Kolita or Kholta, and in Rangpúr, &c., into Rájbansi and Kócch—those of the Moslem faith everywhere dropping their ethnographic designation. Their first priests were Déóshi, their next, Kolita or Kholta, and their last, the Brahmans or Múllahs. Buchanan vouches that their primitive or proper language (as still used by the unadulterated remnant of the race) has no affinity with the Prákrits, and I can attest the entire conformity of the physiognomy of all, and of the creed and customs of this remnant with those of the other aborigines around them. I have already stated that I failed to get at the unconverted Kócch, and that my Vocabulary is that of the converted. Hereafter I trust to supply this desideratum,

* This is identical with Kócch, the difference being merely that of the Sanscrit and Prakrit forms of the same word.

Observe that this is the name of the extant Bodo and Dhimál priesthood, one of numerous proofs demonstrative of the affinity of all the three people.

and in the meanwhile I cannot do better than give Buchanan's unusually careful and ample account of the condition, creed, and customs of this people—which, being compared with my own subsequent statement of the condition, creed, and customs of the Bódo and Dhimál (of whom Buchanan says little or nothing), will satisfactorily demonstrate the affinity I have insisted on.

Kócch. Status.

"The primitive or Páni Kócch live amid the woods, frequently changing their abode in order to cultivate lands enriched by a fallow. They cultivate entirely with the hoe, and more carefully than their (Arian) neighbours, who use the plough; for they weed their crops, which the others do not. As they keep hogs and poultry, they are better fed than the Hindus; and as they make a fermented liquor* from rice, their diet is more strengthening. The clothing of the Páni Kócch is made by the women, and is in general blue, dyed by themselves with their own indigo, the borders red, dyed with Morinda. The material is cotton of their own growth, and they are better clothed than the mass of the Bengalese. Their huts are at least as good, nor are they raised on posts like the houses of the Indo-Chinese, at least not generally so. Their only arms are spears: but they use iron-shod implements of agriculture, which the Bengalese often do not. They eat swine, goats, sheep, deer, buffaloes, rhinoceros, fowls, and ducks—not beef—nor dogs, nor cats, nor frogs, nor snakes. They use tobacco and beer, but reject opium and hemp. They eat no tame animal without offering it to God (the gods), and consider that he who is least restrained is most exalted, allowing the Gárós to be their superiors, because the Gárós may eat beef. The men are so gallant as to have made over all property to the women, who in return are most industrious, weaving, spinning, brewing, planting, sowing—in a word, doing all work not above their strength. When a woman dies, the family property goes to her daughters; and when a man marries, he lives with his wife's mother, obeying her and his wife. Marriages are usually arranged by mothers in nonage, but consulting the

* The classic Zyth, *ξυθον*, beer without hops, as universal among the Aborigines is the absence of spirits or distilled waters.

destined bride. Grown-up women may select a husband for themselves, and another, if the first die. A girl's marriage costs the mother ten rupees—a boy's five rupees. This sum is expended in a feast with sacrifice, which completes the ceremony. Few remain unmarried, or live long. I saw no grey hairs. Girls who are frail can always marry their lover. Under such rule, polygamy, concubinage, and adultery are not tolerated. The last subjects to a ruinous fine, which if not paid, the offender becomes a slave. No one can marry out of his own tribe. If he do, he is fined. Suttees are unknown, and widows always having property can pick out a new husband at discretion. The dead are kept two days, during which the family mourn, and the kindred and friends assemble and feast, dance and sing. The body is then burned by a river's side, and each person having bathed returns to his usual occupation. A funeral costs ten rupees, as several pigs must be sacrificed to the manes. This tribe has no letters, but a sort of priesthood called Déóshi, who marry and work like other people. Their office is not hereditary, and everybody employs what Déóshi he pleases, but some one always assists at every sacrifice and gets a share. The Kócch sacrifice to the sun, moon, and stars, to the gods of rivers, hills, and woods, and every year, at harvest home, they offer fruits and a fowl to deceased parents, though they believe not in a future state. Their chief gods are Rishi and his wife Jágó. After the rains the whole tribe make a grand sacrifice to these gods, and occasionally also, in cases of distress. There are no images. The gods get the blood of sacrifices; their votaries, the meat. Disputes are settled among themselves by juries of Elders, the women being excluded here, however despotic at home. If a man incurs a fine, he cannot pay with purse; he must with person, becoming a bondman, on food and raiment only, unless his wife can and will redeem him."

Climate.

The climate of north Bengal or Kócch (including the country of the people so called, and of the Bódo and Dhimáls) is too well known to require any particular notice. It is much less healthful than that of north Bihár, being infested with low fevers, which are either propagated from

the wilds north and east of it, or, more probably, generated on the spot by excessive moisture and vegetation in the very extensive tracts of waste, still unhappily to be found everywhere east of the Kósi river. West of that river, or in the ancient Mithilá, and modern north Bihár, the climate is as much more salubrious as cultivation is more diffused. The Saul forest everywhere, but especially to the east of the Kósi, is malarious to an extent which no human beings can endure, save the remarkable races which for ages have made it their dwelling-place. To all others, European or native, it is deadly from April to November. Yet the Dhimál, the Bódo, the Kíchak, the Thárú, the Dhénwár, not only live but thrive in it, exhibiting no symptoms whatever of that dreadful stricken aspect of countenance and form which marks the victim of malaria. The like capacity to breathe malaria as though it were common air characterises nearly all the non-Arian aborigines of India, as the Kóls, the Bhíls, the Gónds, who are all fine and healthy races of men, though dwelling where no other human beings can exist. This single fact is to my mind demonstration that the non-Arians have tenanted the wilds they now dwell in for many centuries, probably thirty, * because a *very* great lapse of time could alone work so wonderful an effect upon the human frame; and even with the allowance of centuries, the fact stands forth as one of the miracles of human kind, which those who can explain may sneer at the *other* amazing diversities worked by time and clime on that marvellous unit, the seed of Adam! The Bódo and Dhimáls, whom I communicated with, alleged that they cannot endure the climate of the open plains, where the heat gives them fevers. This is a mere excuse for their known aversion to quit the forest; for their eastern brethren dwell and till like natives in the open plains of Assam, just as the Kóls of south Bihár (Dhángars) do now in every part of the plains of Bihár and Bengal, in various sites abroad, and lastly in the lofty sub-Himálayas. The Kóls are indeed, as enter-

* There is "no cabalistic virtue" in thirty, as Mr. Lyell observes in reference to his theory of the fourfold division of Tertiary rocks. That number expressly is given, however, because about 3000 years back is the probable date of the immigration of the Arian Hindus.

prising as industrious, and they should be employed by every European who seeks to reduce and cultivate any part of the malarious forests of India.* But it must not be forgotten that the very same qualities of freedom from disabling prejudices, cheerful docility, and peaceable industrious habits and temper, which render the Kóls now so valuable to us, are the inherent characteristics of most of the aborigines, requiring only the hand and eye of a paternal Government to call them forth, as in the case of the Kóls. Ages of insolent oppression drove the aborigines to the wilds, and kept them there till their shyness of all strangers had become rooted and intense. But I can answer for the Bódo and Dhimál possessing every good quality of the Kóls in an equal or superior degree, and the Bódo have already shown us with what facility those qualities may be put in action for our benefit as well as their own.

Physical type of all.

The physical type of the Kócch, as contrasted with that of the Hindu, is palpable, but not so as compared with that of the Bódo and Dhimál. In other words, the physical type in *all* the non-Arians (of this frontier at least) tends to oneness. A practised eye will distinguish at a glance between the Arian and non-Arian style of features and form—a practised pen will readily make the distinction felt—but to perceive and to make others perceive, by pen or pencil, the physical traits that separate each group or people of Arian or of non-Arian extraction from each other group, would be a task indeed! In the Arian form (Hindu) there is height, symmetry, lightness, and flexibility: in the Arian face, an oval contour with ample forehead and moderate jaws and mouth; a round chin, perpendicular with the forehead; a regular set of distinct and fine features; a well-raised and unexpanded nose, with elliptic nares; a well-sized and finely-opened eye, running directly across the face; no want of eyebrow, eyelash, or beard; and lastly, a clear brunet complexion, often not darker than that of the most southern Europeans.

In the non-Arian form, on the contrary, there is less height,

* How comes it that the Deyrah grantees, whom the malaria disables through their peasantry, do not procure Dhángars or Kóls, who would answer thoroughly and exactly for the purpose in view? I speak from much experience.

less symmetry, more dumpiness and flesh: in the non-Arian face, a somewhat lozenge contour, caused by the large cheek-bones; less perpendicularity in the features to the front, occasioned not so much by defect of forehead or chin as by excess of jaws and mouth; a larger proportion of face to head, and less roundness in the latter; a broader, flatter face, with features less symmetrical but perhaps more expressive, at least of individuality; a shorter, wider nose, often clubbed at the end and furnished with round nostrils; eyes less, and less fully opened, and less evenly crossing the face by their line of aperture; ears larger; lips thicker; beard deficient; colour brunet, as in the last, but darker on the whole, and, as in it, very various. Such is the general description of the Indian Arians and non-Arians. With regard to the particular races of the latter, it can only be safely said that the mountaineers exhibit the Mongolidan or Turanian type of mankind more distinctly than the lowlanders, and that they have in general a paler, yellower hue than the latter, among whom there are some (individuals at least) nearly as black as negroes. Among the Kóls * I have seen *many* Orauns and Múndas nearly black; whereas the Larkas or Hós (says Tickell) are as pale, and handsome too, as the highest-caste Hindu. The Kócch, Bódo, and Dhimál are as fair as their Bengali neighbours on one side, and scarcely darker (especially the Bódo) than the mountaineers above them on the other side, and whom (the latter) they resemble in the latter style of their features and form, only with all the physiognomical characteristics softened down, and the frame less muscular and massive. The Kóls have a similar cast of face, and a very pleasant one it is to look upon in youth, exhibiting ordinarily far more of individuality, character, and good humour than the more regular but tame and lifeless faces of the Arian Hindus. For the further illustration of this point I beg to refer to the accompanying drawings and appendix, and proceed now from the Kócch tribe to the Bódo and Dhimál tribes, who occupy the entire northern and eastern

Bódo and Dhimál Location.

* Kól is an old and classical name, and the best I think for the great mass of aborigines intervening between the Bhils, the Gonds, and the Ganges—at least till we know them better. The Orauns, Múndas, Kóls proper, and Larkas, seem to be distinct, and the chief families or stirpes.

skirts of the Kócch country, between the open plains and the mountains, both of which sites, generally speaking, they avoid, and adhere to the great forest belt that divides the two, and which is, on an average, from fifteen to twenty miles broad. The Dhimáls, who seem fast passing away as a separate race, and whose numbers do not now exceed 15,000 souls, are at present confined to that portion of the Saul forest lying between the Konki and the Dhorla or Torsha, mixed with the Bódo, but in separate villages and without intermarriage. But the Bódo are still a very numerous race, and extend as foresters from the Súrmá to the Dhansri, and thence, viâ Bijni and the Bhútan and Sikim Tarai, to the Konki, besides occupying, outside the forest limits, a large proportion of central and lower Assam. In the divisions of Darang and Chatgari they constitute the mass of the fixed population: they abound in Chárdwár and Noudwár: in Nougáon and Tularam's country they are the most numerous tribe next to the Mikirs and Lalongs; in Kámrúp next to the Dhékra and Kócch; whilst in the marches or forest frontier of the *north* from Bijni to Aliganj of Morung they form the sole population, except the few Dhimáls who are mixed with them; and in the *eastern* marches from Gauhati to Sylhet they are less numerous only than the Gárós, Rábhás, and Hajongs, not to mention that the two last, if not all three, are but Bódos in disguise. I look upon the Rábhá as merely the earliest and most complete converts to Hinduism, who have almost entirely abandoned the Bódo tongue and customs, and upon the Hájóngs or Hojaí Kacháris of Nowgong, as the next grade in time and degree of conversion, who now very generally affect a horror at being supposed confreres in speech or usages with the Bódo, though really such. Nor have I any doubt that the Gárós are at least a more affiliated race, and no way connected with the monosyllabic-tongued tribes around them.* I do not, however, at present include the Gárós, or Rábhás, or Hájóngs among the Bódo, who are now viewed as embracing only the Méches of the west and the Kácháris of the east and south; and, so limited, this race numbers not less than 150,000 to 200,000 souls. An

accurate general census seems out of question except for Assam, but the above enumeration is given as an approximate result of several statements obligingly supplied to me by Mr. Kellner, Mr. Scott, Dr. Campbell, and that enlightened traveller, Permanand Acharya. Thus the Bódo race extends from Tipperah and the country of the Kúkis on the south-east to Morung and the country of the Kíchaks to the north-west, circling round the valley of Assam by the *course of the Dhansri*, en route to the north, though Major Jenkins assures me that Bódos may be found even east of that river in the Assam valley. The latitude and longitude of the Bódo country are the same with those of the Kócch country, to speak without any affectation of a precision the subject does not admit of, and thus we may say the Bódo extend from 25° to 27° north latitude, and from 88° to 93½° east longitude; and that the Dhimáls are confined to the most westerly part of this wide range of country, or that portion lying between the Konki and the Dhorla. My personal communications with these tribes were chiefly with those still found in all their primitive unsophistication on the banks of the Méchi river, and from much intercourse with these, during four months, I conclude that neither people have any authentic ancient traditions. Nevertheless the ancient connection of the Dhimáls with the west, and of the Bódo with the east, part of north Bengal, is vouched by the facts, that a tract of country lying between the Konki and the Mahananda is still called Dhimáli; and a still larger tract situated between the great bend of the Brahmaputra and the Gáró hills is yet called Méchpárá. The close connection of the Bódo with Kámrúp is further confirmed by the facts of the mass of the people being still found there, though under the name of Kachári, and by the intimate affinity of the Bódo speech and customs with those of the Gárós. The so-called Káchár Rajah is a new man and alien to the Bódo race, and so is the mass of the people of Káchár. But Túlarám is a Bódo, and the late Rajah of Karaibári another, and the Kalang dwár chief a third; and among the Lords marchers of the southern confines of Assam, others might once, if not still, be found; for when the keeping of the northern marches (towards Bhutan)

was entrusted to the Kócch race, that of the southern dwárs or doors (towards Gáró and Nágá land) was committed to the Bódo tribe, that is, to its chiefs. It would not appear that any chief of Dhimál race now exists: but the scattered remnants of this race assure me that they once had chiefs when they dwelt as a united people in Morung, on the banks of the Kaval (Kamla), whence they removed to the Téngwá, and ultimately to and across the Konki, sixty years ago, in order to escape from Górkhali oppression. Of the few lately extant chiefs of Bódo race, the Karaibári Rajah's estate is transferred to the stranger, and the Kalang and Tularam chiefships are shorn of much of their "fair proportions." But in the days of Hajo, the Kócch founder, as well as in those of some of his more prudent successors, the Bódo seem to have had great political consequence, and if Hajo's descendants had steadily adhered to the wise maxims of their ancestor, their power might longer and more effectually have defied its enemies, whereas most of the Kócch Rajahs followed the illiberal Arian maxims of Viswa Sinh, and thus the Bódo were driven back upon their beloved forests, retreats which, speaking generally, neither they, nor the Dhimáls, have since quitted, save in Assam. I proceed now to the consideration of the status, creed, and customs of the Bódo and Dhimál. Upon these points the two people have so much in common, that though I have myself gone through each particular separately in regard to each people, I shall spare the patience of my readers by aggregating what is common, and separating only what is particular, to the Bódo and Dhimál.

Condition.—The condition or status of the Bódo and Dhimál people is that of erratic cultivators of the wilds. For ages transcending memory or tradition, they have passed beyond the savage or hunter state, and the nomadic or herdsman's estate, and have advanced to the third or agricultural grade of social progress, but so as to indicate a not entirely broken connexion with the precedent condition of things; for, though cultivators, all and exclusively, they are nomadic cultivators, so little connected with any one spot that neither the Bódo nor Dhimál language possesses a name for village! Though dwelling in those wilds, wherein the people of

Status.

the plains (Ahírs and Gwállas) periodically graze immense numbers of buffaloes and cows, they have no large herds or flocks of their own to induce them to wander; but, as agriculturists little versed in artificial renovative processes, they find in the exhaustion of the worked soil a necessity, or in the high productiveness of the new a temptation, to perpetual movement. They never cultivate the same field beyond the second year, or remain in the same village beyond the fourth to sixth year. After the lapse of four or five years they frequently return to their old fields and resume their cultivation if in the interim the jungle has grown well, and they have not been anticipated by others, for there is no pretence of appropriation other than possessory; and if, therefore, another party have preceded them, or if the slow growth of the jungle give no sufficient promise of a good stratum of ashes for the land when cleared by fire, they move on to another site, new or old. * If old, they resume the identical fields they tilled before, but never the old houses or site of the old village, that being deemed unlucky. In general, however, they prefer new land to old, and having still abundance of unbroken forest around them, they are in constant movement, more especially as, should they find a new spot prove unfertile, they decamp after the first harvest is got in. † They are all in the condition of subjects (of Népál, Sikim, Bhútán, or Britain) having no property whatever in the soil they till, and discharging their dues to the Government they live under (Sikim, for example), 1st, by the annual payment of one rupee per agricultural implement, for as much land as they can cultivate therewith (there is no land measure); 2nd, by a corvée or tribute of labour for the sovereign and for his local representative. They calculate that they can raise thirty to forty rupees' worth of agricultural produce

* Arva in annos mutant et superest ager! So immutable is human nature that the descriptions applied to our ancestors in their pristine state are absolutely and most significantly true of similarly circumstanced races now abiding in the forest jungles of India.

† Such are the primitive habits still in use from the Konki to the Monásh, and which are most worthy of study and record, as being primitive and as being common to two people, the Bódo and Dhimál, though abandoned by the Kámrúpian and most numerous branch of the Bódo.

with one agricultural implement, so that the land-tax is very light; and the corvée is more irksome than oppressive. It requires them, on the Rajah's behalf, to quit their homes for three or four days, thrice a year, in order to carry burdens for him into the hills, whenever he has goods coming from the plains; but, on the representative's behalf, to work only on the spot. Four times a year they must help to till his fields; also to build or repair his dwelling-house; to supply him with fuel and plates (leaves) whenever he gives a feast; and, lastly, they must pay him one seer of cotton each year for every cotton field they have. Very similar is the condition, in regard to taxation, of the Bódo and Dhimáls under the Nepal and Bhútán Governments. Under the British, the permanent cultivators of the open lands of Kámrúp are subject to the usual burdens incidental to our rule, which they discharge with ease, owing to their industrious and orderly habits. Major Jenkins gives them the highest character, observing that—"they are a remarkably fine peasantry, and have very superior cultivation of the permanent kind." This is abundant proof of the docility of the Bódo, and strong presumptive evidence that their erratic habits and adhesion to the wilds, elsewhere, are the result of oppression, at least as much as of the bias of pristine custom. But as the Kámrúpian Bódo have abandoned with their erratic propensities a deal of whatever is most characteristic of them as a distinct race, I resume the delineation of them and of the Dhimáls, as still found in primitive simplicity between Bijni and Mórang. There they are migratory cultivators of a soil in which they claim no sort of right, proprietory or possessory, but which they are allowed to till upon the easy terms of a quit-rent and labour tax, because none others will or can enter their malaria-guarded limits. There is no separate calling of herdsman or shepherd, or tradesman or shopkeeper, or manufacturer or handicraft, alien or native, in these primitive societies, which admit no strangers among them, though they live on perfectly amicable terms with their neighbours, and thus can always procure, by purchase or barter, the very few things which they require and do not produce themselves.

To a person accustomed to the constitution of social bodies in India, whether Arian or Tamulian, it must seem nearly impossible that communities could exist without smiths, and carpenters, and potters, and curriers, and weavers, not to mention barbers. Yet of these helot craftsmen, whose existence forms so striking a feature of all Indian societies, and whose origin and status so much need * illustration, there is no trace among the Bódo or Dhimáls, though they live apart from all others, like the Khónds, Gónds, and Kóls, who *have* these aliens among them; and necessarily so, for their inaccessible position and predacious propensities would otherwise too often cut them off from all aid of craftsmen; whereas the Bódo and Dhimál, who dwell upon the plains, and on peaceful equitable terms with their neighbours, can always command such services, or rather their products in the markets. The Bódo and Dhimáls have no buffaloes, few cows, no sheep, a good many goats, abundance of swine and poultry, some pigeons and ducks. They have no need, therefore, of separate herdsmen, unless it were swine-herds, and these might be very useful in feeding their large store of pigs in the forest. But they have no such vocation among them, each family tending its own stock of animals, which is entirely consumed by that family, and no part thereof sold, though the proximate hill-men would gladly purchase pigs from them. But they love not trade nor barter further than is needful, and their need is confined to obtaining (besides rice) a few earthen and metallic culinary utensils, still fewer agricultural implements of iron, and some simple ornaments

* When we consider the indispensableness of the services of these craftsmen, it is remarkable that they should have continued to the present day in a helot or out-caste state, not only among the Arians but even among the non-Arians, not only in the plains but in the mountains. My belief is, that most of the non-Arians, on the Arian conquest, retired to the mountains and jungles, and that those who remained were reduced to helotism and became the artizans of Arian society, such as we now see them. Ages afterwards some of them passed into the fastnesses and wilds occupied by their non-Arian brethren, in freedom, and fierce defiance, for the most part, of their Arian enemies. These immigrants are the recent helot craftsmen of the Gónds, Khónds, and Kóls, such as we now see them, non-Arians in origin like the masters they serve, but from whom they fail to obtain better treatment than from the Arians. No common tie is recognised; and ages of freedom and of servitude have left no common trait of character.

for their women—all which are readily obtained at the Kócch marts in exchange for the surplus cotton and oil-seed of their efficient agriculture. Each man builds and furnishes his own house, makes the wooden implements he requires, and is his own barber, or his neighbour for him, and he for his neighbour. He uses no leather, and he makes basketry for himself and family, whilst his wife spins, weaves, and dyes the clothes of the family, and brews the beer which all members of it freely consume. Thus, all manufactures are domestic, and all arts. The Bódo and Dhimáls are generally averse from taking service with, or doing work for, strangers, whether as soldiers, menials, or carriers, though there are a few soldiers and servants at Dorjiling belonging to the Bódo race, who conduct themselves well in their respective capacities. Among their own communities there are neither servants nor slaves, nor aliens of any kind; and whilst their circumstances tend to perpetuate equality of means, neither their traditions, their religion, nor their usages sanction any artificial distinctions of rank. Though they have no idea of a common tie of blood, yet there are no diverse septs, clans, or tribes among them, nor yet any castes; so that all Bódo and all Dhimáls are equal—absolutely so in right or law—wonderfully so in fact. Nor is this equality the dead level of abject want. On the contrary, the Bódo and Dhimáls are exceedingly well-fed, and very comfortably clothed and housed; and so soon as you know them—for they are very shy of strangers—their voices, looks, and conduct all proclaim the absence of that grovelling fear and cunning which so shock one in one's intercourse with the people of Bengal, and the mass of whom are much worse fed, and distinctly worse clothed and housed, than either Bódo or Dhimáls. Equality.

Laws.—It having been already stated that these people are, and have been for ages, in the condition of subjects of foreign Governments, I need hardly observe that they have no *public laws* or polity whatever, nor even any traces of that village economy which so pre-eminently distinguishes Indian-Arian societies. Their habits are too simple and migratory to allow of the existence of the village system, with its train Laws.

of hereditary functionaries and craftsmen. They dwell in the forest in little communities, consisting of from ten to forty houses, which they are perpetually shifting from place to place. Each of these communities is, however, under a head called Grá by themselves, Mondol by their neighbours. To the foreign Government they live under their Grá is responsible for the revenue assessed, which he pays periodically to the Rajah's representative—the Choudri—in cowries or rupees, the only currency. He has no scribe, nor keeps any accounts, his simple explanations to the Choudri being verbal. To the Choudri he is answerable, likewise, for the keeping of the peace and for the arrest of criminals: but crimes of a deeper dye are almost unknown, and breaches of the peace very rare. Should a murder or robbery occur, the Choudri would take cognizance of it, assisted by three or four proximate heads and elders of villages, and report to the Rajah, from whom alone in such cases a decision could issue. With regard to his own community, the head of the village has a general authority of voluntary rather than coercive origin, and which, in cases of the least perplexity, is shared with the heads or elders of two or three neighbouring villages. Those who offend against the customs of the Bódo or Dhimál—that is, their own customs—are admonished, fined, or excommunicated, according to the degree of the offence; the village priest being called in, perchance, to give a higher sanction to the award. The same jury-like tribunal seems to have almost exclusive cognizance of *civil law*, or the usages of each people in regard to inheritance, adoption, divorce, &c. Marriage is rather a contract than a rite, and as such is dissoluble at the will of either party; and if the divorce be occasioned by the wife's infidelity, the price paid for her to her parents must be refunded by them. Dower is not in use, and women, in general, are deemed incapable of holding or transmitting property. All the sons get equal shares, nor is there any nice distinction of sons by marriage, adoption, or concubinage. Adoption is common and creditable, even if there be one son of wedlock: concubinage is rare and discreditable. Daughters have no inheritance nor dower, but if their parents be rich and give them marriage presents,

such are held to be their own, and will be retained by them in the event of divorce. Neither Bódo nor Dhimál can marry beyond the limits of his own people; and if he do, he is severely fined. Within those limits only, two or three of the closest natural ties are deemed a bar to marriage. In the event of divorce, the children belong to the father, or the sons to the father and the daughters to the mother. If the husband take the adulterer in the fact, he may beat him and likewise the wife; but no more;* and thereafter, if he please, he may put his wife away, when she and the adulterer will continue to abide together as man and wife without scandal, but without marriage rite; or, if the husband please, he may pardon her, and frequently does so, should the offence have been the first, and committed with one of the tribe and not with an alien. Chastity is prized in man and woman, married and unmarried; and, as a necessary consequence, women are esteemed and respected, and divorce and separation rare, notwithstanding the bad footing upon which the custom or law of these nations sets the nuptial union. Siphilis is absolutely unknown among the Bódo and Dhimál —a fact that speaks volumes, and one that renders it scarcely necessary to add that any class of women, devoted to unchastity, is a thing for which their languages have no name, and their manners no place. Filial piety is not a marked feature in their character, nor perhaps the want of it. Sons, on marriage, quit the parental roof, and sometimes previously; but it is deemed shameful to leave old parents entirely alone; and the last of the sons, who by his departure does so, is liable to fine as well as disinheritance. Infanticide is utterly unknown, with every savage rite allied to it, such as human sacrifice, self-immolation, and others, too frequent among rude people. Daughters, on the contrary, are cherished, and deemed a source of wealth, not poverty; for every man must buy his wife with coin or labour, and 'tis very seldom that the price comes to be redemanded by the wronged and unforgiving husband. There is no bar to remarriage, and satti is a rite held in abhorrence.

* Among the Parbattias of Nepal the wronged husband may, nay must, slay the adulterer.

Learning. Of *learning and letters* the Bódo and Dhimáls are totally devoid, and always have been so. The numerals of the cardinal scale are only seven in the Bódo tongue, ten in the Dhimáls, and they have no ordinals at all. Beyond seven or ten they count by the Hindu ways of fours and of scores, and in this manner they can reckon to 200. Very few of the Bódo or Dhimáls have learnt to write the neighbouring Prákrits, but many can converse in them, particularly in the corrupt Bengálí prevailing from the Kosi to the Brahmapútra. To the segregated manner of life of the Bódo and Dhimáls, and to the practice of both people of marrying only within the pale of their own folk, I ascribe the present purity of their languages.

Religion. *Religion.*—The religion of the Bódo and Dhimáls is distinguished, like their manners and customs, by the absence of everything that is shocking, ridiculous, or incommodious. It lends no sanction to barbarous rites, nor does it hamper the commerce of life with tedious inane ceremonial observances. It takes less cognizance than it might advantageously do of those great sacraments of humanity, baptism, marriage, and sepulture, withholding all sanction from the first, and lending to the other two, especially marriage, a less *decided* sanction than the interests of society demand. The deplorable impediments to the business of society, occasioned by the Hindu (Arian) religion, are too well known to call for specification. But even some of the non-Arians are pestered with usages, under the guise of religion, which are alike injurious to health and convenience,* or are pregnant with cruelty.† From all such crimes and mischiefs the religion of the Bódo and Dhimáls is wholly free. With the most striking events or dearest ties of life it meddles little directly, confining itself almost exclusively to the propitiation of the superior powers by offerings and sacrifices. A Bódo or Dhimál is born, is named, is weaned, is invested with the toga virilis, without any intervention of his priest, who is summoned to marriages and funerals chiefly, if not solely, to

perform the preliminary sacrifice, which is indispensable to consecrate a feast, for no Bódo or Dhimál will touch flesh the blood of which has not been offered to the gods; and flesh constitutes a goodly proportion of the material of those feasts which solemnise funerals and weddings alike. The office of the priesthood is not an indefeasible right vested in a caste, nor is the profession at all exclusive. The priests are native Bódo or Dhimál, no way distinguished from the rest of the community, either before or after induction. Occasionally the son will succeed the father in this office, but rarely; and whoever chooses to qualify himself may become a priest, and may give up the profession whenever he sees fit. More than this, the Elders of the people may and do participate in the functions of the priesthood and even exercise them alone, so that it is not improbable there was a time when the civil heads of the community were likewise its ecclesiastical directors. This imperfect constitution of the clerical office has probably proved, upon the whole, a great blessing to these people by saving them from the trammels of *all* refined Paganism (Egyptian, Classic, Indian), though it has had the necessary ill effect of keeping their religious ideas in a state of extreme vagueness. I am not inclined to consider "the natural man" as a savage; and I have no hesitation in calling the religion of the amiable Bódo and Dhimáls the religion of Nature or rather, the natural religion of Man. It consists, clearly enough, of the worship of the most striking and influential of sensible objects—of the "starry host," and of the terrene elements—with a vague but impressive reference of the *powers* displayed by these sensible objects to an immaterial or moral source; unknown indeed, but still adored as Divine, and even as a divine Unity.* It is true that these latter conceptions are too vague to be denominated, strictly speaking, ideas proper to these people, much less positive tenets of their creed; and hence their languages have no word for God, for soul, for heaven, for hell, for sin, for piety, for prayer, for repentance. It is true that their gods are many, and are all void

* I refer the caviller to Pope's universal prayer, and to that famous fane of antiquity dedicated to the Unknown God.

of definite moral attributes (save when their own meaner passions of vanity and anger and grief are occasionally ascribed to them). But still, in the pre-eminence assigned, however vaguely, to one (or two) of these gods, we cannot deny to these simple-minded races the germ of a *feeling* of God's unity; and when they appeal to Him as the avenger of perjury, the sanctioner of an oath; we must acknowledge that the moral sentiments of their own nature irresistibly impel them to ascribe like sentiments to the Godhead. Now, in every serious matter of dispute that cannot be decided by testimony, usually so called; oaths and ordeals are had recourse to—and both as substitutes for, and not confirmatives of, evidence, according to the ancient Jewish (nay, universal) notions on this head. But oaths and ordeals are appeals to the moral nature of the Divinity: nor can it be denied that, though the practical religion of the Bódo and Dhimáls consists of idle offerings and sacrifices to trivial deities, supplications for protection from danger, and thanksgivings when it is over, accompany these offerings and these sacrifices, forming a part, how inconsiderable soever, of the religious rites of the people, as conducted by the priesthood. The priests, *or* the elders, superintend the administration of oaths and of ordeals: the priests *alone* direct and conduct those high festivals, which thrice a year are celebrated in honour of the Elemental gods, and once a year in honour of the household divinities; as likewise those occasional acts of worship which originate with more or less diffused, or individual, calamity. The calamities to which the Bódo and Dhimál stand most exposed are small-pox and cholera, which sorely afflict them; and drought, blight, and the ravages of wild elephants and rhinoceroses, from which their crops suffer not less. Diseases are considered to arise entirely from preternatural agency, and hence there are no medical men but a regular class of exorcists, who are a branch of the priesthood, and whose mode of relieving the possessed or sick will be described presently. They are called Ojhá, and are the sole physicians. Small-pox is the direst scourge of the Bódo and Dhimáls; next cholera (since 1818); next itch; then diseases of the intestines, as

diarrhœa and dysentery; then fever; then goitre: diseases of the liver and lungs are very rare, and siphilis is unknown. The Bódo and Dhimál, though healthy races, are not long-lived nor prolific. Grey hairs are less common than in the hills or plains: sixty is deemed a great age: a family of eight or nine living children is hardly known; five or six alive is nearly the maximum, and two to four the mean. The hazards and the importance of agriculture to the Bódo and Dhimál are sufficiently indicated by their creed, the three chief festivals of which have almost exclusive reference thereto. Great as are the ravages committed on the crops by insects and wild animals, drought seems to be dreaded still more than either, so that among all the numerous gods, Jupiter pluvius, as typed by the rivers, commands a reverence second to none with the Dhimáls, second to one or two only with the Bódo. *All* the rivers between the Cosi and the Torsha are chief divinities of the Dhimáls—all those between the Konki and the Bar nadi, prime deities of the Bódo. Fire, however indispensable agriculturally for the clearing of the forest, is by no means equally reverenced; nor the earth, which yields all; nor the noble forest, so cherished, and so many ways indispensable; nor the mountains whence come these very rivers; nor even the sun and moon, which alone of the starry hosts are worshipped at all. All these deities are worshipped devoutly indeed, but none with such earnestness as the rivers: and yet the rivers flow too low to allow of their waters being turned to irrigation, so that it is as an index of copious rains, upon which exclusively Bódo and Dhimál crops are dependent, that the rivers are entitled to this reverence, though crossing as they do *so* frequently and *so* directly the route of communication through the country of these tribes, 'tis no wonder that they have unusually commanded attention. When I first obtained lists of the Bódo and Dhimál divinities, at once so numerous and so devoid of attributes, I was exceedingly perplexed what to make of these gods, how to render them at all intelligible to myself or others. But one key to the enigma was soon found in the Hindu pantheon—another in the best frontier maps, especially those of Rennell,

where the rivers proved to be so many Dii majores. A third class of gods, and a very important and characteristic one, in regard to the Bódo more particularly, remained, however, for solution. These, following the people themselves, I have denominated the 'household gods,' because their worship is conducted *inter parietes*. 'National,' however, were the fitter term, for these are the original deities of the whole people; and though their worship be conducted at home, or in each house, the whole neighbourhood participates through the medium of the accompanying sacrifice and feast, and reciprocally at every householder's of the village, once a year in solemn pomp, and more frequently and quietly as occasion may require. Not to mention that these deities likewise share with the elemental gods the high triennial festivals above adverted to; for how ample soever the Bódo or Dhimál pantheon, their practical religion is as simple as their manners, and they dispose of their superfluous divinities by adoring them all in the lump! A good many of the household or national divinities of the Bódo are elemental gods, chiefly rivers. Báthó, however, the chief god of the Bódo, is not an elemental god; but he is clearly and indisputably identifiable with *something tangible*, viz., the Síj or Euphorbia, though why that useless and even exotic plant should have been thus selected to type the godhead I have failed to ascertain. Mainou or Mainong is the wife of Báthó, and equally revered with him; more I cannot learn of her. The supreme gods of the Dhimáls are usually termed Waráng-Béráng, that is, the old ones, or father and mother of the gods. They likewise are a wedded pair, whose proper names are respectively Pochima and Timai vel Timáng, of whom the latter is undoubtedly the Tishta river, and the former, I believe, the river Dhorla. The Bódo and Dhimáls have neither temple nor idol, and altogether their religion belongs to the same primitive era with their habits and manners, is void of offence or scandal, and if any judgment may be made of it from the manners and character of its professors, is not without beneficial influences.

I proceed now to some details upon this point, in which it will be necessary sometimes to speak separately of the Bódo

and Dhimál religions, though so little essentially distinct. This general correspondence extends not merely to the entire substance and character of the religion, properly so called, of each people, but to all minor points connected therewith: for example, both people have but a vague notion of the existence or functions of those Dii minores called Genii, Fauns, Satyrs, and Sylvans by the classic ancients, and Fairies, Sprites, Gnomes, Ogres, &c., by our Gothic or Teutonic ancestors. Neither people is infested with the Gothic bugbear of ghosts, or with the Gothic and classic follies of magic, sorcery, divining, omens, auspices, astrology, or fortune-telling. On the other hand, both Bódo and Dhimál alike and devoutly believe in witchcraft, of which they entertain a deep dread, and likewise in the influence of the evil eye, though much less dreaded than witchcraft. Omens are very slightly, if at all, heeded by either.

I know not that I can add anything worth preserving to the foregone list of the deities of the Bódo and Dhimál, save what will fall more appropriately under the head of rites and ceremonies. The list might have been considerably enlarged, but chiefly by importations from the Hindu pantheon; and as these consist of mere names, it seems sufficient to observe, once for all, that the Bódo and Dhimál have latterly adopted a good many of the Hindu goddesses, particularly the various forms of Durgá or Kálí, but without any of the rites appropriate to her worship, or even any images of her. The deities of the Bódo and Dhimál are divided into males and females, old and young; and the latter distinction is material, as indicating the relative rank and consideration of the gods: the ancient or venerable (Brai-Baroï in Bódo, Waráng-Béráng in Dhimál, according to the sex) are the Dii majores; the young (Khúngar vel Jholou in Bódo, Whánté in Dhimál) are the Dii minores. It will be noticed that several of the deities bear the title of Rájah; and as one of these (Hájó) is a known historic person, it seems probable that this portion of the Bódo and Dhimál pantheon exemplifies the classic and Hindu practice of deifying the mortal benefactors of man-

kind—in a word, apotheosis, or hero worship. Madai, in Bódo, is a general term, equivalent to Deity, Divinity; Dír and Grám are corresponding terms in Dhimál.

Religious rites.

Rites and Ceremonies.—The rites of the Bódo and Dhimál religions are entirely similar, and consist of offerings, sacrifices, and prayers. The prayers are few and simple when stript of their mummery; and necessarily so, being committed solely to the memories of a non-hereditary and very trivially instructed and mutable priesthood. They consist of invocations of protection for the people and their crops and domestic animals; of deprecations of wrath when sickness, murrain, drought, blight, or the ravages of wild animals, prevail; and thanksgivings when the crops are safely housed, or recent troubles are passed. The offerings consist of milk, honey, parched rice, eggs, flowers, fruits, and red-lead or cochineal; the sacrifices of hogs, goats, fowls, ducks, and pigeons—most commonly hogs and fowls. Sacrifices are deemed more worthy than offerings, so that all the higher deities, without reference to their supposed benevolence or malevolence of nature, receive sacrifices—all the lesser deities, offerings only. Libations of fermented liquor always accompany sacrifice—*because*, to confess the whole truth, sacrifice and feast are commutable words, and feasts need to be crowned by copious potations! Malevolence appears to be attributed to very few of the gods, though of course all will resent neglect; but, in general, their natures are deemed benevolent; and hence the absence of all savage or cruel rites. All diseases, however, are ascribed to supernatural agency. The sick man is supposed to be possessed by one of the deities, who racks him with pains as a punishment for impiety or neglect of the god in question. Hence, not the mediciner but the exorcist is summoned to the sick man's aid. The exorcist is called both by the Bódo and Dhimáls Ojhá, and he operates as follows. Thirteen leaves, each with a few grains of rice upon it, are placed by the exorcist in a segment of a circle before him to represent the deities. The Ojhá, squatting on his hams before the leaves, causes a pendulum attached to his thumb by a string to vibrate before them, repeating invocations the while. The god who has possessed the sick man is

indicated by the exclusive vibration of the pendulum towards his representative leaf, which is then taken apart, and the god in question is asked what sacrifice he requires—a buffalo, a hog, a fowl, or a duck, to spare the sufferer? He answers (the Ojhá best knows how!) a hog; and it is forthwith vowed by the sick man and promised by the exorcist, but only paid when the former has recovered. On recovery the animal is sacrificed, and its blood offered to the offended deity. I witnessed this ceremony myself among the Dhimáls, on which occasion the thirteen deities invoked were Póchima or Waráng, Timai or Béráng, Lákhim, Konoksiri, Ménchi, Chímá, Danto, Chádúng, Aphóï, Biphóï, Andhéman (Aphún), Tátopátia (Báphún), and Shúti. A Bódo exorcist would proceed precisely in the same manner, the only difference in the ceremony being the invocation of the Bódo gods instead of the Dhimál ones.

Festivals.

The *great festivals* of the year are three or four. The first is held in December-January, when the cotton crop is ready. It is called Shúrkhar by the Bódo, Haréjata by the Dhimáls. The second is held in February-March. It is named Wágalénó by the Bódo, who alone observe it. The Bódo name for the third, which is celebrated in July-August, when the rice comes into ear, is Phúlthépno. The Dhimáls call it Gávi púja. The fourth great festival is held in October, and is named Ai húnó by the Bódo—Pochima páká by the Dhimáls. The three first of these festivals are consecrated to the elemental gods, and to the interests of agriculture. They are celebrated abroad, not at home (generally on the banks of a river), whence attendance on them is called Hágron húdong or madai húdong, 'going forth to worship,' in contradistinction to the style of the fourth great festival, which is devoted to the household gods, and is celebrated at home. The Wágaléno or bamboo festival of the Bódo I witnessed in the spring of this year, and will describe it as a sample of the whole. Proceeding from Siligori to Pankhabárí with Dr. Campbell, we came upon a party of Bódo in the bed of the river within the Saul forest, or rather were drawn off the road by the noise they made. It was a sort of chorus of a few syllables, solemnly and musically incanted, which, on reaching the spot, was found to be uttered by thir-

teen Bódo men, who were drawn up in a circle facing inwards, and each carrying a lofty bamboo pole decked with several tiers of wearing apparel, and crowned with a Chour or Yakstail. Within the circle were three men, one of whom, with an instrument like this ( ) in his hands, danced to the music, waving his weapon downwards on one side and so over the head, and then downwards on the other side and again over the head. He moved round the margin of the circle, in the centre of which stood two others; one a Deóshi or priest, and the other an attendant or servitor called Phantwál. The priest, clothed in red cotton, but not tonsured or otherwise distinguished from the rest of the party, muttered an invocation, whereof the burden or chorus was taken up by the thirteen forming the ring above noticed. The servitor had a water-pot in one hand and a brush in the other, and from time to time, as the rite proceeded, this person moved out of the circle to sprinkle with the holy water another actor in this strange ceremony, and a principal one too. This is the Déódá, or the possessed, who when filled with the god answers by inspiration to the questions of the priest as to the prospects of the coming season. When we first discerned him, he was sitting on the ground panting, and rolling his eyes so significantly that I at once conjectured his function. Shortly afterwards, the rite still proceeding, the Déódá got up, entered the circle, and commenced dancing with the rest, but more wildly. He held a short staff in his hand, with which, from time to time, he struck the bedizened poles one by one, and lowering it as he struck. The chief dancer with the odd-shaped instrument waxed more and more vehement in his dance; the inspired grew more and more maniacal, the music more and more rapid, the incantation more and more solemn and earnest, till at last, amid a general lowering of the heads of the decked bamboo poles, so that they met and formed a canopy over him, the Déódá went off in an affected fit, and the ceremony closed without any revelation—a circumstance which must be ascribed to the presence of the sceptical strangers; for it is faith alone that worketh miracles, and only among and for the faithful. This ceremony is performed annually by the Rajah of Sikim's orders, or rather with his sanction of the

usages of his subjects, is addressed to the sun, the moon, the elemental gods, and above all to the rivers, and is designed to ensure health and plenty in the coming year, as well as to ascertain beforehand its promise or prospect through the revelations of the Déódá. With regard to the festival sacred to the national or home-bred (noöni) gods, called Aihuno by the Bódo, and Póchima páká by the Dhimáls, it is to be observed that the rite, like the separate class of deities adored thereby, is more distinctively Bódo than Dhimál. With both people the pre-eminence of water among the elements is conspicuous; but whereas the river gods of the Dhimáls have nearly absorbed all the rest, elementary or other, the household gods of the Bódo stand conspicuously distinguished from the fluviatile deities. The Póchima and Timang of the Dhimáls are one or both rivers; the Báthó and Mainang of the Bódo are neither of them rivers, and their interparietal rites are as clearly distinguished from the rites performed abroad to the fluviatile and other elemental gods. However, the rites of Báthó and Mainou are *participated* by deities of elementary and watery nature; and, on the other hand, the Dhimáls assert that Póchima and Timai have a two-fold character, one of river gods (Dhorla and Tishta), and one of supreme gods, and that they are adored separately in these two characters, the Póchima páká or home rite of October being appropriated to them in the latter capacity, or that of supreme gods. I have not witnessed the Póchima páká, and therefore speak with hesitation. The Ai* húnó is performed as follows. The friends and family being assembled, including as many persons as the master of the house can afford to feast, the Déóshi or priest enters the enclosure or yard of the house, in the centre of which is invariably planted a Síj or Euphorbia, as the representative of Báthó, who is the family as well as national god of the Bódo. To Báthó thus represented the Déóshi offers prayers and sacrifices a cock. He then proceeds into the house, adores Mainou, and sacrifices to her a hog. Next, the priest, the family, and all the friends proceed to some convenient and pleasant spot in the vicinity,

* Ai or Aya is the goddess Kámákyá or Kámrúp, vis genetrix naturæ, typed by the Bhaga or Yoni. See page 131.

previously selected, and at which a little temporary shed has been erected as an altar, and there, with due ceremonies, another hog is sacrificed to Agráng, a he-goat to Manásho and to Búli, and a fowl, duck, or pigeon (black, red, or white, according to the special and well-known taste of each god) to each of the remaining nine of the Noöni madai. The blood of the sacrifice belongs to the gods, the flesh to his worshippers; and these now hold a high feast, at which beer and tobacco are freely used to animate the joyous conclave, but not spirits, nor opium, nor hemp. The goddess Mainou is represented in the interior of each house by a bamboo post about three feet high, fixed in the ground and surmounted by a small earthen cup filled with rice. Before this symbol is the great annual sacrifice of the hog above noted performed; and before this the females of the family, *once* a *month*, make offerings of eggs. For the males, due attention to the four annual festivals is deemed sufficient in prosperous and healthful seasons. But sickness or scarcity always begets special rites and ceremonies suited to the circumstances of the calamity, and addressed more particularly to the elemental gods if the calamity be drought, or blight, or devastations of wild animals; to the household gods if it be sickness. Hunters likewise and fishers, when they go forth to the chase, sacrifice a fowl to the Sylvan gods to promote their success; and, lastly, those who have a petition to prefer to their superiors conceive that a similar propitiation of Jishim and Mishim, or of the Chiris, will tend to the fulfilment of their requests. And this, I think, is nearly the whole amount of rites and ceremonies which their religion prescribes to the Bódo and Dhimáls; and anxious as I am fully to illustrate the topic, I will not try the patience of my readers by describing all that variety of black victims and white, of red victims and blue, which each particular deity is alleged to prefer; first, because the subject is intrinsically trifling; and, second, because the diverse statements of my informants lead me to suspect that the matter is optional or discretionary with each individual priest prescribing these minutiæ. I have mentioned the rude symbols proper to Báthó and Mainou. None of the other gods seem to have any at all, though a low line of kneaded

clay attached to the Tháli that surrounds the sacred Euphorbia in the yards of the Bódo is said to stand for the rest of the divinities, who, as I have already said, are wont to be worshipped collectively rather than individually; and thus the sun, the moon, and the earth, though adored by Bódo and by Dhimál, have no separate rites, but are included in those appropriated to the elemental gods. Witchcraft is universally dreaded by both Bódo and Dhimál. The names of the craft and of its professors, male and female, will be found in the vocabulary. Witches (Dain and Mháï) are supposed to owe their noxious power to their own wicked studies, *or* to the aid of preternatural beings. When any person is afflicted, the elders assemble and summon three Ojhás or exorcists, with whose aid, and that of a cane freely used, the elders endeavour to extort from the witch a confession of the fact and the motives. By dint of questioning and of beating, the witch is generally brought to confession, when he or she is asked to remove the spell, to heal the sufferer—means of propitiating preternatural allies (if their agency be alleged) being at the same time tendered to the witch, who is, however, forthwith expelled the district, and put across the next river, with the concurrence of the local authorities. No other sorcery or black art, save that of witches, is known; nor palmistry, augury, astrology, nor, in a word, any other supposed command of the future than that described in the 'Wá galéno' as the attribute (for the nonce) of the Déódá or vates. The evil eye causes some alarm to Bódo and to Dhimál, who call it mogon nángo and mí nójó respectively, and who cautiously avoid the evil-eyed person, but cannot eject him from the community. The influence of the evil eye is sought to be neutralised by offerings of parched millet and eggs to Khoja Rajah and Mansha Rajah—Dii minores, who find no place in my catalogue, ample as it is. Moïsh madai, I am told, likewise claims a place in the Bódo pantheon, and a distinguished place too, as the protector of this forest-dwelling people from beasts of prey, and especially the tiger.

Priesthood.—The priesthood of the Bódo and Dhimáls is entirely the same, even to the nomenclature, which with both

Priesthood, p. 125.

people expresses the three sorts of clergy by the terms Déóshi, Dhámi, and Ojhá. The Dhámi (seniores priores!) is the district priest, the Déóshi the village priest, and the Ojhá the village exorcist. The Déóshi has under him one servitor, called Phantwál. There is a Déóshi in nearly every village. Over a small circle of villages one Dhámi presides, and possesses a vaguely defined but universally recognised control over the Déóshis of his district. The general constitution and functions of the clerical body have already been fully explained. Priests are subject to no peculiar restraints, nor marked by any external sign of diverse dress or other. The connection between pastor and flock is full of liberty for the latter, who collectively can eject their priest if they disapprove of him, or individually can desert him for another if they please. He marries and cultivates like his flock, and all that he can claim from them for his services is, first, a share of every animal sacrificed by him, and, second, three days' help from each of his flock (the grown males) per annum towards the clearing and cultivation of the land he holds on the same terms with them, and which have been already explained. Whoever thinks fit to learn the forms of offering, sacrifice, and accompanying invocation can be a priest; and if he get tired of the profession, he can throw it up when he will. Ojhás stand on the same footing with Dhámis and Déóshis. They are remunerated solely by fees; but into either office—priests or exorcists—the form of induction is similar, consisting merely of an introduction by the priests or exorcists of the neophyte to the gods the first time he officiates. One Dhámi and two Déóshis usually induct a Déóshi; three Ojhás an Ojhá; and the formula is literally that of an introduction—'This is so-and-so, who proposes, O ye gods! to dedicate himself to your service. Mark how he performs the rites, and, if correctly, accept them at his hands.'

Customs. *Customs.*—Under this head I shall state the usages observed at births, naming, weaning, toga virilis, marriage, and death, aggregating what is common, and distinguishing what is peculiar, to the Bódo or Dhimáls. The customs of both people have a great similitude, owing to their perfect simplicity. They are derived, in fact, from nature, and nature

as little strained by arbitrary devices of man as can well be. At births the mother herself cuts the navel-string, so soon as she has recovered strength for the act. No midwives are found, so that nature must do all, or the mother and offspring perish together. But deliveries are almost always very easy, and death in childbed scarcely known—a blessing derived from the active and unsophisticated manners of the sex. The idea of uncleanness occasioned by births, and by deaths also, is recognised; but the period of uncleanness and segregation is very short, and the purificatory rites consist merely of bathing and shaving, performed by the parties themselves. The infant is named immediately after birth, or as soon as the mother comes abroad, which is always in four or five days after delivery. There are no family names, or names derived from the gods. Most Bódo and Dhimáls bear meaningless designations, or any passing event of the moment may suggest a significant term: thus a Bhótia chief arrives at the village, and the child is called Jinkháp; or a hill peasant arrives, and it is named Góngar, after the titular or general designation of the Bhótias. Children are not weaned so long as their mother can suckle them, which is always from two to three years—sometimes more; and two children, the last and penultimate, are occasionally seen at the breast together. The delayed period of weaning will account in part for the limited fecundity of the women. When a Bódo or Dhimál comes of age, the event is not solemnised by any rite or social usage whatever. Marriage takes place at maturity, the male being usually from twenty to twenty-five years of age and the female from fifteen to twenty. Courtship is not sanctioned: the parents or friends negotiate the wedlock, though in so simple a state of society it cannot be but the parties have frequently met and are well known to each other. The Hindús wisely and decorously attach much discredit to the parent who takes a "consideration" for the grant of his daughter in marriage. No such delicacy is recognised by Bódo or Dhimál parents, who invariably demand and receive a price, which is called Jan in the language of the former, and Gándi in that of the latter people. The amount varies from ten to fifteen rupees

among the Dhimáls, from fifteen to forty-five among the Bódo. I cannot learn the cause of the great difference. A youth who has no means of discharging this sum, must go to the house of his father-in-law elect, and there literally earn his wife by the sweat of his brow, labouring, more judaico, upon mere diet for a term of years, varying from two as an average to five and even seven as the extreme period. This custom is named Gabóï by the Bódo—Ghárjyá by the Dhimáls. It, of course, implies a good deal of intercourse between the betrothed youth and damsel prior to their nuptials; but from all I can learn, instances of opportunity abused are most rare. The legal nature and effects of the nuptial contract have been already explained under the head of Laws: what concerns fecundity, longevity, &c., under the head of Medicine, as a branch of religion. The marriage ceremony is little perplexed with forms. After the essential preliminaries have been arranged, a procession is formed by the bridegroom elect and his friends, who proceed to the bride elect's house, attended by two females specially appointed, to put red-lead or oil on the bride elect's head when the procession has reached her home. There a refection is prepared, after partaking of which the procession returns, conducting the bride elect to the house of the groom's parents. So far the same rite is common to the Bódo and Dhimál—the rest is peculiar to each. Among the Dhimáls, the Déóshi now proceeds to propitiate the gods by offerings. Dáta and Bídata, who preside over wedlock, are invoked, and betel-leaf and red-lead are presented to them. The bride and groom elect are next placed side by side, and each furnished with five pauns, with which they are required to feed each other, while the parents of the groom cover them with a sheet, upon which the Déóshi, by sprinkling holy water, sanctifies and completes the nuptials. Among the Bódo the bride elect is anointed at her own home with oil; the elders *or* the Déóshi perform the sacred part of the ceremony, which consists in the sacrifice of a cock and a hen, in the respective names of the groom and bride, to the sun; and next, the groom, rising, makes salutation to the bride's parents, and the bride similarly attests her future

duty of reverence and obedience towards her husband's parents; when the nuptials are complete. A feast follows both with Bódo and Dhimáls, but is less costly among the former than among the latter—as is said, because the higher price paid for his wife by the Bódo incapacitates him for giving so costly an entertainment. The marriage feast of the Dhimáls is alleged to cost thirty to forty rupees sometimes, the festivities being prolonged through two and even three days; whereas four to six, rarely ten, rupees suffice for the nuptial banquet of a Bódo.

The Bódo and Dhimáls both alike bury the dead, immediately after decease, with simple but decent reverence, though no fixed burial-ground nor artificial tomb is in use to mark the last resting-place of those most dear in life, because the migratory habits of the people would render such usages nugatory. The family and friends form a funeral procession, which bears the dead in silence to the grave. The body being interred, a few stones are piled loosely upon the grave to prevent disturbance by jackals and ratels rather than to mark the spot, and some food and drink are laid upon the grave; when the ceremony is suspended and the party disperses. Friends are purified by mere ablution in the next stream, and at once resume their usual cares. The family are unclean for three days, after which, besides bathing and shaving, they need to be sprinkled with holy water by their elders or priest. They are then restored to purity, and forthwith proceed to make preparations for a funeral banquet, by the sacrifice of a hog to Mainou or Timáng, of a cock to Báthó or Póchima, according to the nation. When the feast has been got ready and the friends are assembled, before sitting down they all repair once again to the grave, when the nearest of kin to the deceased, taking an individual's usual portion of food and drink, solemnly presents them to the dead with these words, 'Take and eat: heretofore you have eaten and drank with us: you can do so no more: you were one of us: you can be so no longer: we come no more to you: come you not to us.' And thereupon the whole party break and cast on the grave a bracelet of thread priorly attached, to this end, to

the wrist of each of them. Next the party proceed to the river and bathe, and having thus lustrated themselves, they repair to the banquet, and eat, drink, and make merry as though they were never to die! A funeral costs the Dhimáls from four to eight rupees—something more to the Bódo, who practise more formality on the occasion, and to whom is peculiar the singular leave-taking of the dead just described.

Arts. *Useful Arts.*—As already observed, the arts practised by the Bódo and Dhimáls are few, simple, and domestic. Agriculture is the grand and almost sole business of the men, but to it is added the construction and furnishing of the dwelling-house in each of the frequent migrations of the whole people. The boys look after the domestic animals. The women, aided by the girls, are fully employed within doors in spinning, weaving, and dyeing the clothing of the family, in brewing, and in cooking. The state of the arts will be sufficiently and most conveniently illustrated by a description of the house, household furniture, clothes, food, and drinks of the people, preceded by an account of the implements, processes, and products of agriculture.

Agriculture. The agricultural implements are an axe to fell the forest trees, a strong bill or bill-hook to clear the underwood and also to dig the earth, a spade for rare but more effectual digging, and lastly a dibble for sowing the seed. The axe is called Rúá by the Bódo, Dúphé by the Dhimáls. It is a serviceable implement of iron (the head) similar to that in use in the plains, where the head is bought; the haft being made at home. The bill, called Chékhá by the Bódo, Ghongóï by the Dhimáls, is a 'jack of all work,' like in shape to our English bill, but with the curved extremity or beak prolonged, and furnished with a straight downward edge of some three inches. It is of iron, of course, and purchased in the Kócch marts. The spade is the ordinary short bent one of the plains, where it is bought, and where it is called Kódál. The Bódo and Dhimáls use it but little, and have no name of their own for it. The dibble is a wooden staff about four feet long, made by the people themselves. It is like a stout walking-staff sharpened at the lower end. The process of

culture, emphatically called 'clearing the forest,'* is literally such for the most part, and would be so wholly, but that several of the species grown being biennials, a field is retained over the first year, so that the second year's work consists merely of weeding and re-sowing rice amid the other standing products. The characteristic work is the clearing of fresh land, which is done every second year, and thus axes and bills clear away the wood. Fire completes what they have left undone, and at the same time spreads over the land an ample stratum of manure (ashes). The soil is worked nearly enough in eradicating the undergrowth of trees (for the lords of the forest are only truncated); so that what little additional digging is needed may be and is performed with the square end of the bill. 'Tis no great matter, and firing is the last *effectual* process. Amid the ashes the seed is sown by a dibbler and a sower, the former of whom, walking erect, perforates the soil in quincunxes by sharp strokes of his pointed staff (called Shómán by the Bódo, and Dhúmsi by the Dhimáls), so as to make a series of holes from one to two inches deep, and about a span apart; whilst the latter, following the dibbler, and furnished with a basket of mixed seeds, drops four to six seeds into each hole, and covers them at the same time. All the various produce raised is grown in this promiscuous style. Chait, Baisák, and half Jeth† comprise the season for preparing and sowing the soil. Sáwan, Bhádún, Kúár, and half Kártik,‡ that for gathering the various products, save cotton, which is not gathered till Pús-Mágh.§ The rest are reaped as they successively ripen: first, cucurbitaceous plants (Kóhara, Louka, Khíra, Kankara, Karéla); then greens (Sém, mattar, Béngan, Chichinda, Póï); then the several edible roots (Yam, Arwi, &c.); then the condiments (Haldi, Adrak, red peppers); then the millets and pulse (Marwa, Kúlthi, Úrid); then maize; next rice; then the mustards (Tori or Sarsún or Til); and last of all, cotton. The fields, which are much better worked in eradicating the jungle than

those for which the Bengal plough performs the same office, are likewise as much better weeded; and how strange soever to mere English ears the huge mixture of crops may sound, this mixture does not greatly exceed the practice of Bengal, nor is it inconsistent with good returns, though there be no artificial irrigation whatever. The cotton is a biennial of inferior quality, but it is the main crop, and that from the sale of which in the plains the Bódo and Dhimáls look to provide themselves with the greatest part of the rice they consume; for their own supply is very inadequate. Nevertheless rice is usually spoken of as the crop next in estimation to cotton, though maize and even millet seem to contribute as much to the quantity of home-reared food. The rice grown is similar to the 'dry rice'—'the Ghaiá' of Nepal—the 'summer rice' of the plains. The other articles grown have all been enumerated above, save indigo, which, with the cochineal of the forest and madder procured from the hills, supplies the Bódo and Dhimáls with dyes. Arhar and a few more of the superior agricultural and horticultural products of the plains are occasionally grown by the Bódo and Dhimáls, whose chief products, however, are those given above, and of them not absolutely all in one field and year, though from twelve to fifteen are always there, and include a good supply of vegetables, condiments, and cerealea, but the last deficient in the article of rice, which is the principal grain eaten. Of vegetables, the favourites are Béngans, cucurbitacea, and roots (Thá vel Lin in their own tongues); of cereals, rice; of condiments, red peppers. Mustards are grown not for their oils, nor as stimulants, but merely for eating like parched pease. The oil-seeds are fried, and are relished in that state;* the young plants also are used as greens. The surplus seed is sold to the oilmen of the plains, neither Bódo nor Dhimál being wont to express oil, of which they consume little, and that only for cooking. Lights they use none (save on occasions of ceremony and of púja), but go to bed early, and sit by the fire—a splendid wood-fire—till then. The small quantity of oil used for cooking they buy in the adjacent marts of

the Kócch. The cotton crop and the surplus of the mustard crop are all the agricultural products which they sell any portion of. Cotton is habitually sold, the small portion only that is needed for clothing the family being reserved, which may be about one-fifteenth of what is raised. The domestic animals have been enumerated elsewhere, and must be spoken of again when we come to the head of Food. Agriculturally viewed, they are a dead letter, not even their manure being employed.

Upon the whole, the agriculture of the Bódo and Dhimáls is conducted with as much skill as that of their lowland neighbours; with skill much superior to that of their highland neighbours; and with pains and industry greatly above those of either highlanders or Kóccches. The following details of what is raised by one Bódo cultivator, and consumed by himself, his wife, and three young children, imperfect though they be, will help to convey a just idea of his position; and those who care to compare it with the position of a peasant in the hills and in the plains will find the means of making such comparison in Appendix II.

It has been already mentioned that the Bódo and Dhimál peasant is liable to a corvee or labour tax, the items of which may be added thus—for the Rajah, 3 days thrice a year, or 9 days; for the Rajah's local representative, 6 days; for the village priest or Déóshi, 3 days—total, 18 days per annum. This is so much deducted from his resources, and may be stated at two * rupees in coin. A peasant of the plains using the plough will earn twice or even thrice as much as a Bódo or Dhimál, and yet, what with the wretched system of borrowing at 25 to 30 per cent., and the grievous extra frauds incidental to that system, he will not be nearly so well off. The Bódo or Dhimál, again, has abundance of domestic animals, and is, moreover, at liberty to eat the flesh of all save the cow; whereas the peasant of the plains has few, and of those only the goat that he can eat. And, lastly, the Bódo's industrious wife not only spins, but weaves and dyes all the clothes of the family, besides supplying it amply with wholesome and agreeable beer, whilst the peasant's wife in the plains does nothing but spin; and though this may diminish the cost of the family clothing, still it must be bought; nor will there be much thread to dispose it in free sale, apart from the clothier. The highland peasantry generally earn less than the Bódo and Dhimáls, and are proportionally worse

* If the Bódo pay one rupee of direct and two of indirect taxes, he will be nearly on a level, *quoad* public burdens, with the peasant of the plains.

off, though lightly taxed, and exempt from the curse of the borrowing system. The Néwár peasants of the great valley of Nepal—as industrious as the Bódo and Dhimáls—nay, more so—and more skilful too—earn more and retain more, notwithstanding the heavy *rent* they pay to their landlord, who pays the light tax or Government demand on the land. The particulars may be seen in the Appendix.

Houses.—The Bódo and Dhimáls build and furnish their own houses without any aid of craftsmen, of whom they have none whatever. They mutually assist each other for the nonce, as well in constructing their houses as in clearing their plots of cultivation, merely providing the helpmates with a plentiful supply of beer. A house is from 12 to 16 cubits long by 8 to 12 wide. A smaller house of the same sort is erected opposite for the cattle; and if the family be large, two other domiciles like the first are built on the other sides, so as to enclose an open quadrangle or yard. The houses are made of jungle grass, secured within and without by a trellis-work of strips of bamboo. The roof has a high and somewhat bulging pitch, and a considerable projection beyond the walls. It also is made of wild grass, softer than that which forms the walls. There is only one division of the interior, which separates the cooking and the sleeping portions of the house, which has no chimney or window, and but one door. Ten to forty such houses form a village, without any rigid uniformity or any defences whatever. Houses.

Furniture is very scant, consisting only of a rare bedstead, some sleeping-mats, a stool or two, and some swinging-shelves; and all of these are made at home. Household utensils are a few earthen vessels for carrying and holding water, some metallic cooking, eating, and drinking pots, and a couple of knives, to which we must add the spinning, weaving, dyeing, and brewing apparatus of the women. All the latter are of the simplest possible form and home-make. The earthen and metallic pots and pans are purchased in the Kócch marts. There are none of iron nor of copper; all are of brass or other mixed metals that are metallic, owing, it is said, to the dearness of iron and copper. There are no leathern utensils. Baskets of bamboo and of cane and ropes Furniture

of grass are abundant, and of home-make by the men, who likewise haft all the iron implements they purchase abroad for agricultural or domestic uses. It has already been said that lights are dispensed with beyond what is afforded by an ample fire.

Clothes. *Clothes.*—With both people they are made at home, and by the women. The Bódo women wear silk procured from the castor-plant worm, which they rear at home in each family. The Bódo men and Dhimáls of both sexes wear cotton only. Woollen is unknown, even in the shape of blankets. The manufactures are durable and good, and not inconveniently coarse—in fact, precisely such as the people require; and the dyeing is very respectably done with their own cochineal, morinda, or indigo, or with madder got from the hills; but all prepared by themselves. The female silk vest of the Bódos possessed by me is 3½ feet wide by 7 long, deep red, with a broad worked margin of cheque pattern—and of white and yellow colours, besides the ground red—above and below. This garment is called Dókhana by the Bódo, and must be a very comfortable and durable dress, though it somewhat disfigures the female form by being pressed over the breast as it is wrapped round the body, which it envelops from the armpits to the centre of the calves. The female garment of the Dhimáls differs only in material, being cotton. It is called Bónha. The male dress of the Bódo consists of two parts—an upper and a lower. The former is equivalent to the Hindu Chadar or toga. It is called Shúmá, and is 9 to 10 cubits by 3. The latter, styled Gámchá, and which is 6 cubits by 2, is equivalent to the Hindu Dhoti, and after being passed between the legs is folded several times round the hips, and the end simply tucked in behind. The male dress of the Dhimáls is similar. Its upper portion is called Pátaka; its lower, Dhári; the whole, Dhába with this people; Hí with the Bódo. All cotton clothes, whether male or female, are almost invariably white or undyed. Neither Bódo nor Dhimál commonly cover the head, unless when the men choose to take off their upper vest and fold it round the head to be rid of it. Shoes are not in use; but a sort of sandals or sole-covers, called Yápthong vel Champhoï, sometimes are,

and are made of wood by the people themselves. There are no other shoes. Ornaments are rare, even amongst the women, who, however, wear small silver rings in their ears and noses also, and heavy bracelets of mixed metal on their wrists. These are bought in the Kócch marts, and are quite simple in form.

Food.—The sorts of vegetable food have been already enumerated in speaking of agriculture. Rice is the chief article; wheat or barley unknown even by name. Ghiu or clarified butter is likewise totally unused and unnamed, and oil is very sparingly consumed for food. Salt, chillies, vegetables, plenty of rice, varied sometimes with maize or millet, and fish or flesh every second day, constitute, however, a meal which the poor Hindu might envy, washed down as it is with a liberal allowance of beer. Plenty of fish is to be had from December to February, both inclusive, and plenty of game from January to April inclusive, though the Bódo and Dhimál are no very keen or skilful sportsmen, notwithstanding the abundance of game and freedom from all prohibitions. They have the less need to turn hunters in that their domestic animals must supply them amply with flesh. They have abundance of swine and of poultry, and not a few of goats, ducks, and pigeons, but no sheep nor buffaloes, and cows are scarce. Milk is little used, but not eschewed, as by the Gárós it is. They may eat all animals, tame or wild, save oxen, dogs, cats, monkeys, elephants, bears, and tigers. Fish of all sorts, land and water tortoises, mungooses, civets (not cats !), porcupines, hares, monitors of enormous size, wild hogs, deer of all sorts, rhinoceros, and wild buffaloes, are amongst the wild animals they pursue for their flesh, and altogether they are abundantly provided with meat. Food.

Drinks and Stimulants.—The Bódo and Dhimáls use abundance of a fermented liquor made of rice or millet, which the former call Jó, the latter Yú. It is not unpleasant, and I should think was very harmless. Its taste is a bitterish sub-acid, and it is extremely like the Ajimana of the Néwárs of Nepal. Brewing and not distilling seems to be a characteristic of nearly all the Tamulian races, all of whom drink and make beer, and none of them spirits. The Bódo and Dhimál pro- Drinks.

cess of making this fermented liquor is very simple. The grain is boiled; the root of a plant called Agaichito is mixed with it; it is left to ferment for two days in a nearly dry state; water is then added *quantum sufficit;* the whole stands for three or four days, and the liquor is ready. The Agaichito plant is grown at home. Its root, which serves for balm, is called Emon. I have never seen it. Besides this beer—of which both people use much—they likewise freely use tobacco; but never opium nor hemp in any of the numerous preparations of both; nor distilled waters of any kind; and, upon the whole, I see no reason to brand them with the name of drunkards, though they certainly love a merry cup in honour of the gods at the high festivals of their religion. Among my own servants, the Bódo have never been seen drunk; the Moslems and Hindús several times excessively so.

Manners. *Manners.*—The manners of the Bódo and Dhimáls are, I think, a pleasing medium between the unsophisticated roughness of their highland neighbours and the very artificial smoothness of their neighbours of the plains. They are very shy at first; but, when you know them, are cheerful without boisterousness, and inquisitive without intrusion. Man's conduct to woman is always one of the best tests of his manners; now the Bódo and Dhimáls use their wives and daughters well, treating them with confidence and kindness. They are free from all out-door work whatever, and they are consulted by their husbands as their safest advisers in all domestic concerns, and in all others that women are supposed likely to understand. When a Bódo or Dhimál meets his parent, or one of the elders of the community, he drops his joined hands to the earth, and then raises them to his forehead; and if he be abroad, he says, 'Father, I am on my way;' to which the parent or senior answers, 'May it be well with you.' There is little visiting, save that which is inseparable from the frequent religious feasts and festivals, already sufficiently described; nor are amusements or pastimes for young or old common. Indeed, children or women seem to have none, and the men so little heed them that neither Bódo nor Dhimál tongue has a word of its own for

sport, play, or game! The young men, however, have two games, which I proceed to describe summarily. In the light half of October, on the day of the full moon, a party of youths proceeds at nightfall from village to village, like our Christmas wakers, hailing the inhabitants with song and dance, from night till morn, and demanding largess. This is given them in the shape of grain, beer, and cowries, wherewith on their return they make a feast, and thus ends the pastime, which is called Harna-harni by the Bódo, and Harna-dháká by the Dhimáls. Again, in the dark half of the same month, when the wane is complete, the youths similarly assemble, but in the daytime, and dressing up one of their party like a female, they proceed from house to house and village to village, saluting the inhabitants with song and dance, and, obtaining presents as before, conclude the festival with a merrymaking among themselves. The Bódo name of this rite or game is Chórgéléno; the Dhimáls call it Chórdháká. And now we shall conclude the subject of manners with a statement of the ordinary manner in which a Bódo or Dhimál passes the day. He rises at day-spring, and having performed the offices of nature and washed himself, he proceeds at once to work in his field till noon. He then goes home to take the chief meal of the day, and which consists of rice, pulse, fish or flesh (on alternate days), greens and chillies, with salt—never ghiu—seldom oil. He rests an hour or more at noon, and then resumes his agricultural toils, which are not suspended till nightfall. So soon as he has got home he takes a second meal with his family, then chats a while over the fire, and to bed betimes, seldom two hours after dusk. If the children be young, they sleep with their parents; if older, apart. The Bódo call their first meal Sanjúphúni inkhám; their second Bílíni inkhám. The Dhimál name for the first is Mánjbéla-cháká; for the second Dilima-cháká. Wives usually eat after their husbands, children with.

Character.

Character.—The character of the Bódo and Dhimál, as will be anticipated from the foregoing details, is full of amiable qualities, and almost entirely free from such as are unamiable. They are intelligent, docile, free from all hard or obstructive prejudices, honest and truthful in deed and word,

steady and industrious in their own way of life, but apt to be mutable and idle when first placed in novel situations, and to resist injunctions, injudiciously argued, with dogged obstinacy. They are void of all violence towards their own people or towards their neighbours, and, though very shy of strangers, are tractable and pleasant when got at, if kindly and cheerfully drawn out. The Commissioner of Assam, Major Jenkins, who has by far the best opportunities for observing them, *when drawn out of their forest recesses*, gives them, as we have seen, a very high character as skilful, laborious cultivators and peaceable respectable subjects; whilst that this portion of them want neither spirit nor love of enterprise is sufficiently attested by the fact, that when the Dorjiling corps was raised, two-thirds of the recruits first obtained were Bódo of Assam.* Neither the Bódo nor Dhimál, however, can be characterised, upon the whole, as of military or adventurous genius, and both nations decidedly prefer, and are better suited for, the homebred and tranquil cares of agriculture. They are totally free from arrogance, revenge, cruelty, and *fierté;* and yet they are not devoid of spirit, and frequently exhibit symptoms even of that passionate or hasty temperament which is so rare, at least in its manifestations, in the East. Their ordinary resource against ill-usage is immovable, passive resistance; but their common demeanour is exempt from all marks of the wretched alarm, suspicion, and cunning that so sadly characterise the peasantry of the plains in their vicinity, and which, being habitual, must be fatal to truth. The Bódo and Dhimál in this respect, as in most others, more nearly resemble the mountaineers, whose straightforward, manly carriage so much interests Europeans in their favour. Oppression and its absence beget these different phases of character. The absence of all petty trade likewise contributes materially to the candour and integrity of the Bódo and Dhimáls. Among all mankind, women, wine, and power are the great tempters, the great leaders astray. Now the Bódo and Dhimáls rise decidedly superior to the first temptation, are not unduly enslaved to the second, and, from the perfect equality and subject condition of the whole of them, are en-

* See also Griffith's Journals.

tirely exempted from the third. Power cannot mislead those who never exercise it; where women are esteemed, and no artificial impediments whatever exist to prevent marriage, women are a source, not of vice, but of virtue; and, lastly, where "honest John Barleycorn" is free from the dangerous alliance of spirits, opium, and hemp, I know not that he, even if assisted by the "narcotic weed," need be set down as a necessary corrupter of morals. True, the Bódo and Dhimál do not pretend to the somewhat pharisaical abstemiousness *or* cleanliness of the Hindús. But I am not therefore disposed, particularly on Hindú evidence, to tax them with the disgusting vices of drunkenness and dirtiness, though these, and obstinacy, *if any*, are the vices we must lay to their charge, as the counterpoise of many and unquestionable virtues. Peasant, be it remembered, must be compared with peasant, and not peasant with people of higher condition; and if the comparison be thus fairly made, it may perhaps be truly decided that the Bódo and Dhimál are *less* sober and *less* cleanly and *less* tractable than the people of the plains; *more* sober and *more* cleanly and *more* tractable than those of the hills. The Bódo and Dhimáls are good husbands, good fathers, and not bad sons; and those who are virtuous in these most influential relations are little likely to be vicious in less influential ones, so that it need excite no surprise that these people, though dwelling in the forest, apart from the inhabitants of the open country, are never guilty of blackmailing or dacoity against them, whilst among themselves crimes of deep dye are almost unknown. To the ostentatious hospitality of many nations whose violence against their neighbours is habitual they make no pretensions; but among their own people they are hospitable enough, and towards the stranger invariably equitable and temperate.

Physical Attributes.

The physical characteristics of these races have already been summarily stated. But it is desirable to be more particular on this head. A young man named Bírna, a Bódo, has been selected to represent his nation, and through it the Dhimáls and Kóccheś also, for the traits of face and form are so nearly alike in all that neither pen nor pencil could satisfactorily set them apart.* Bírna is about twenty-one years of age (for, like a true Bódo, he knows not how old he is), so that we are obliged to give his age conjecturally. The mistake, however, cannot exceed a year or two.

His dimensions are as follows in English feet, inches, and quarters :—

	1st time.	*2d time.*

Bírna's colour is an olive or brunet, clear and pale as that of a high-caste Hindú. Though a stout youth, of twenty-one or more, he has not yet the least symptom of beard, and but a very faint show of moustache. He expects, he says, to have more or less of beard in five or six years, but shall carefully eradicate the stray hairs, *more majorum!* He has no want of eyelash or

* Pages 113, 114.

eyebrow, and the hair of his head is copious, straight, strong, and glossy. He has no hair on the chest, but as much as usual on the armpits and elsewhere. He is well made and stout enough, sufficiently fleshy, but without any striking muscular development. His calves, in particular, though not quite equal to those of the mountaineers, are very superior to anything of the sort to be seen amid the people of the plains. His legs are long in proportion to his trunk, but not awkwardly so, and his chest is finely formed, broad and deep. His head is well formed and well set on the shoulders, the great foramen having apparently a central aperture. There is no defect of cranial development anteally or posteally, and the skull is well shaped and round, though not so ample in the frontal region as in fine specimens of the Arian vel Caucasian family, and the face is larger in proportion to the head than in *such* specimens. The length of the head to that of the body is as one to seven nearly. If the features are not straight, or perpendicular, to the front, the want of right line is caused less by recession of the forehead or chin than by the advance of the jaws and lips, which are both large. The mouth is too wide and the lips too thick for beauty; but there is no ape-like or negro-like deformity, nor do the finely-formed teeth project forward. The chin wants the rounded projection of the Arian type; but it is not ill formed nor retiring. The forehead has sufficient height and breadth, though there are vague indications of contraction and backward slope as compared with very fine heads. The eye is sufficiently large and sufficiently well opened; but the cavity around it is too much filled with flesh, and the angles of the aperture have a tendency to obliquity, the outer one upwards and the inner downwards. The nose, sufficiently long and well raised between the eyes, has a good, narrow, straight bridge, but a somewhat thickened or clubbed extremity; and the nares are wide, inclining from the elliptic to the round shape. The ears are somewhat large, and stand rather apart from the head, but not remarkably so. The oval form to which the contour of the face inclines is broken by the projection of the cheek-bones, between which the face is noticeably wider than anywhere else, but only in a small degree; and, upon the whole, the ill effect of the somewhat large and quasi-Mongolian features is redeemed by their cheerful and amiable expression, though the human type indicated is clearly rather Mongolian than Caucasian.

Thus it appears that the productive energy of the Néwár, working with the spade upon the same extent of land or thereabouts, is to the productive energy of the Bódo working somewhat similarly—that is, without aid of plough—as 3 to 2; and to that of the peasant of the plains, using the plough, as 3 to 2 also. The Néwárs, indeed, are the best cultivators in Asia. 'Tis hard to compare the Bódo with them. I have no materials yet for comparison with the highlanders of Sikim, who, however, I know pretty well, cannot compete with the Bódo, whose productive energy exceeds that of the lowland peasant, aided by the plough, by one-seventh. With regard to the peasantry of the plains, it is very evident that it is not the weight of Government taxation which crushes them, but the borrowing system—the miserable habit of never laying by a sixpence—of living upon loans—annually taking up their whole stock from the capitalist at an interest never less, and often more, than 25 per cent., so that, as they say themselves, their life is spent in filling a vessel full of holes at the bottom, and beneath which is another *entire* vessel belonging to the usurer! The above details show that the Government tax is but one-eleventh of what the Azimgarh peasant raises from the soil; and also that the interest he annually pays is nearly (in fact fully) threefold of the public

demand. Thus the poor peasant is perpetually plunged into difficulties such as the present account may fully explain, whereby it is seen that the annual deficit is equal to one-sixth of the annual gross produce raised by this cultivator. Now, look at the Bódo cultivator's account. Here is no debt; and small as the whole earnings are, I can testify that they suffice for such comfort as no peasant of the plains has any conception of. But the Bódo, it may be argued, is nearly exempt from taxation.* Look, then, at the Néwár peasant of Népál, whose burdens equal two-fifths of all he rears from the *soil*—one-fourth of whatever he annually produces by *all* his industrious toils. Nor does it in the least matter to the present question that what he pays is rent, not tax; for in the plains of India the Government stands in place of landlord, and if it did not, the peasant's position cannot be at all affected by the quarter or denomination of his payment, but only by its positive and relative amount, including *every* permanent charge, such as that incurred by the Hindu to those craftsmen whose services his scrupulosity and his indolence compel him to pay for. On the other hand, the simpler and more active habits of the Néwár peasant and his wife enable him to dispense with these craftsmen, and to add, besides, nearly a third to his agricultural income by labour apart from, and in excess of, that devoted to the soil. And thus the Néwár peasant, whilst living far more comfortably than the Hindú peasant—better fed, better clad, and better housed by much, yet never exceeds his income, and paying not a sous to the usurious capitalist, or rather loan-monger, whose *indirect frauds are as bad as his direct extortions*—can sustain cheerily legitimate agricultural burdens great as those I have recorded!

DARJEELING, *June* 4, 1846. B. H. HODGSON.

P.S.—I have said that I do not propose to go into comparisons till I have accumulated a large mass of materials. But I may mention, as a sample of the prospective fruits of this inquiry in reuniting the so long and so utterly scattered members of the Non-Arian family, that the identifying of the Gárós and Khasias (as well as of the Kacháris) with the Bódo is already nearly or quite established, and that points of arbitrary similitude in creed and customs and speech, indicating radical identity of race, are rapidly multiplying in relation to the aborigines of this frontier and those of South Bihar, viz., the Kóls or Dhángars.†

* It has been shown above that the real pressure of taxation is, in fact, equal in both cases.

† Since this paper was written, Mr.[now Sir Walter] Elliot of Madras has shown that the Gónd language of Séóni (north of the Nerbudda) is in vocables and structure very closely allied to Tamil; that is, to the typical speech of the Aborigines.

SECTION II.

ON HIMÁLAYAN ETHNOLOGY.

I.

COMPARATIVE VOCABULARY OF THE LANGUAGES OF THE BROKEN TRIBES OF NÉPÁL.

DARJILING, *October 4th*, 1857.

The Secretary of the Asiatic Society of Bengal.

SIR,—I have the honour to transmit to you herewith four series of Vocabularies of Himálayan tongues, comprising (in two parts), 1st, the languages of the broken tribes of the Central Himálaya; and, 2d (also in two parts), the several dialects of the Kiránti language, which likewise is proper to the same part of the chain, or, to be more specific, to Eastern Népál. The languages included in the two parts of these two papers are—

Broken Tribes.

1. Dahi or Darhi. Daḍhi.
2. Dénwár.
3. Pahi or Paḍhi.
4. Chépáng.
5. Bhrámu.
6. Váyu or Háyu.
7. Kuswár.
8. Kúsúnda.
9. Pákhya, *unbroken.*
10. Tháksya, *unbroken.*
11. Tháru.

Tribes of the Kiránti People.

1. Chamling or Ródóng.
2. Rúngchhénbúng. Bontáwa.
3. Chhingtáng. Bontáwa.
4. Nachhereng.
5. Wáling. Bontáwa.
6. Yákha.
7. Chourásya.
8. Kulung.
9. Thulung.
10. Báhing.
11. Lohorong.
12. Lambichhong. Wáling.
13. Báláli.
14. Sángpáng.
15. Dumi.
16. Kháling.
17. Dungmáli.

The arrangement and nomenclature of these, made some time back, are not quite correct, but they will serve the present end, and can be corrected when we come to particulars. At present it will suffice to say that 9 and 10 of the "broken tribes" cannot well be classed under that head, the Pákhya and Tháksya being still unbroken.

Of the Kiránti tribes, the value of the subdivisional names is not always equal. I have indicated this on the right hand. Thus, 2, 3, 5, as to language, &c., could be unitised under the common name of Bontáwa; and 5, 12, both classed first as Wáling, and then as Bontáwa, the larger aggregate. These minuter affinities are pretty well indicated by the dialects. I was obliged to begin in the dark as to what varieties of the language would be fittest for selection as dialects, and those I hit on were not always of equal value.

As samples of the broken tribes and of the great Kiránti people, I have lately selected for special study the Váyu of the one and the Báhing of the other. I shall forthwith submit these ample essays,* and then may find time to advert to some

* These also will be found in the sequel, but awkwardly blended by a common heading with the empirical comparative vocabularies of the languages of the broken tribes and of the dialects of the Kiránti language, which two latter also are similarly confused. Neither have anything to do with the complete analyses following them. The whole of the papers consist of—(1) comparative vocabularies of the languages of the broken tribes; (2) ditto of the dialects of the Kiránti language;

general considerations. If not, they will be found in the new essay on the "Physical Geography of the Himálaya" now issuing from the Calcutta press as No. XXVII. of Selections from the Records of the Government of Bengal.—I am, Sir, your obedient servant,

B. H. Hodgson.

---

(3) grammatical analysis of the Váyu tongue; (4) ditto of the Báhing tongue, (5) description of the Váyu people; (6) ditto of the Kiránti people, of whom the Báhing are a sept. The two first papers form the sequel of that long series priorly given with a view to furnish *primâ facie* evidence of the affinity of all the Túranians in and near India. But after these two papers had been completed, they were held back in order to that fuller style of investigation which is exemplified by papers 3 and 4. Suddenly, however, I found myself obliged to quit India; and then, deeming it wisest on the whole no longer to delay the publication of the several papers, I sent them all to press, and in my hurry forgot to erase from papers 1 and 2 certain hints for correction or addition which grew out of my increasing knowledge, but which, not having been worked out, should have been erased from these two papers before they were forwarded for publication. This, with my inability to correct the press, will explain what else might seem odd.

* The Kuswár tongue is remarkable for having, though it has nearly lost its vocables, retained its grammar, which shows the affinity of the Kuswár to the Turkic group of tongues. The conjunct pronoun is suffixed to both noun and verb. See on page 170.

† It is almost needless to remark that in columns 1, 2, and 7 the vocables are mostly corrupt Hindi or Khas. The Dahis, Dénwárs, and Kuswárs are located in the Tarai, where the aboriginal tongues are being gradually superseded by Hindi, as they are in the mountains by Khas. But some retain a deal of their grammar—*e. g.*, Kuswár, as to which see the note at page 170.

* Jon and ton, as well as kon, are Hindi and Urdu—languages very rich in relative and correlative terms. At first I got professedly equivalent terms in these Tartar tongues, but afterwards I saw reason to doubt their accuracy, as being contrary to the genius of these tongues—a point as to which see the full treatises on Váyu and Báhing in the sequel.

† For the affixes gu, hma, see note at the word "ten," supra. Dang and dha respectively are quasi-equivalents, sometimes substituted, more rarely added.

‡ Ta-ha-gu, quod (gu) longitudine (ha) magnum (ta). So púti-ha-gu is quod longitudine parvum (púti). Ha is the generic sign of long things.

* Throughout the Háyu column che suffix is the reflexive sign; to, ko, vel po, the transitive; it, hot', and bot' are contractions for i-to vel ish-to, ha-to, and bo'-to. As nature suggests, in point of sense both signs are applicable; thus, ish-che, speak to thyself, articulate; ish-to, speak to him, to some one; ha-s-che, give to thyself; ha-to, give to him. Sis-che, learn = teach thyself; sish-to, teach another. In the other tongues which are losing these niceties they are less clearly explicable. See Váyu grammar in sequel.

† Ou is the neuter or reflexive formative, as ik is the active; and added su makes the former passive—*e.g.*, from root ghan, to speak, ghan-au-mi, n, I speak, utter. Ghan-ou-su, m-mi, p., and ghanaimik-an, a., = ghana-im-ik-an, told I him or it, I told it or I told him.

‡ Phí is a sample of the primitive and neuter verb. There are several other samples in the other columns. See grammar in sequel.

§ I' vel ya of Paḥí, Chépáng, and Bhrámú is the transitive or active sign, as in Néwári and Telugu, though unrecognised as such in either.

‖ Ik, it will have been seen, is the pronominal affix of the third person. The whole, and their application, may be given in this place:—

Baba-im, my father.	Saken-in, I can.	Thatha-im-ik-an, I strike (him or it, transitive).
Baba-ir, thy father.	Saken-ir, thou canst.	Thatha-ir-ik-an, thou strikest.
Baba-ik, his, her, anyone's father.	Saken, he, she, it, can.	Thatha-ik-an, he strikes.

* The rest of this column is pure Khas or Parbatya, as also all the other words having the "K" subjoined. The corrupt Urdu or Hindi of Tháru is too palpable and incessant to need a mark. The Tháru tongue, like the Kóoch and so many others of the Turai from Hardwar to Assam, is fast merging in the proximate Arian tongues; and so also the Hill dialects into Khas.

* U prefixed is the pronominal definitive; ó of ópa and óma is the same. U' vel ó: eu is best; French eu in heure, beur.

† In this and the following columns the sá prefixed is the generic definitive (sá = flesh). Very generally words used singly must have the pronominal or the generic definitive. In composition both fall away, especially the latter; thus, "bone" of column 2 is úyúba or sáyúba, but cow's bone is pí yúba. In "skin" of this column the word is given in all three ways—hókwa, úhok'wa, and sáhok'wa.

‡ Pí úmpa úmchhá, literally cow, its male, its young (see the words for father and mothre,

also used as sex signs, and the third possessive pronoun, conjunct form). As noted at "bone," words used singly must have almost always a definitive, pronominal or generic; and voce egg, umdi, uding, uthin, are samples of the one, as wádí, wadin, babangya, are of the other (wá, bá = fowl). In column 2, "day" has the pronominal definitive, while "face" omits it; in column 1 precisely the reverse is the case. This may indicate optional use; and in column 3 "egg" occurs in all three ways—that is, with either definitive, and without either. In regard to the words for father and mother, the pronominal definitive is indispensable.

answer wang vel bang and pop of the other dialects. Wang and pop recall the numeral signs of Mikir. With reference to those of Kiránti, see and compare note ** of page 191 and note † of page 192; also Baking grammar in sequel. Time was wanting to make out this point in regard to all the dialects; but in the Rungchhen it seems clear that in eu-k-ta, one, the 'ta' is radical, the 'eu' a pronominal definitive, and the 'k' a copula merely.

‖ These distinctions were not fully made out.

¶ The generic signs would seem to adhere to the numerals rather than to the qualitives, or than to both, as in Newari. Thus, in Rungchhen one good man is eukchha nuwo mana, literally, one head good of mankind, whereas in Newari it is chha hma bhing hma manu, of one head, good head of mankind. Again, one good knife is respectively eukpop nuwo chupi and chhagu bhinggu chupi. But note that these generic adjuncts of the numerals are much more clearly developed in Newari than in Kirânti. The dual and plural are always formed as in the samples given under "good" and "sweet." Of gender there is no mark in adjectives.

† Tokpang, fat, is the same as útokpang, great, just above, and which answers to uchukpang, small. To-k and chu-k are the crudes = tá and chi of Newari, and eu, vel u, prefixed is the pronominal definitive, as pang suffixed is the generic one. The fact is, that Rungchhen applies its pronominal definitive equally to substantives (eu-pa, father; e ma, mother), to adjectives (eu-tok, big; euchuk, small), to pronouns (eu hyaoko, that), and to numerals

(eu-kta, one), and thus shows the extreme prevalence of that feature of the language. Our flexible, simply-structured English often assimilates to these Turanian tongues, more or less; and tok, eutok, eutok-pang may be compared to great, the or a great, the or a great one. A-myet-pang and a-dung-pang of column 2, and a-tok-pa and a-chuk-pa of column 5, are words formed precisely like the above. Elsewhere bo, po = ba, pa, is the formative, and again we have ko as in omko, leyangko, &c.

* Já vel chá, and ma, generic sign. See Grain.

† No = Chinese Nyou and Sá vel Chá (whence song, chon, chong, and chik) are really synonymes of wá vel bá vel pá, and = bird. But the term when used alone is now commonly assigned to the bird of birds, the invaluable domestic fowl. Chinese t-sco-k = bird has the sa root: and k suffix is precisely = the Bahing k and the Lohorong, Balali, and Dangmali ng. The t prefix has endless parallels in Sifan, Himalaya, and Gyarung.

* Pit', pih', pik' of this series merely denote the abrupt tone with pi', perhaps also some slight dialectic differences, but the tone is very decided and the final consonant nearly merged in it.

† We have here another sample of the generic sign. See note at the word Millet. Wá vel Bá vel Pó is the class sign for all birds, and the specific name for crow precedes it, precisely as in Chinese, wherein, moreover, the specific name (aa) is identical with the Sangpang name. Thus tseok = bird and aa-tseok = crow. So also kai = fowl, whence Shan-kai, a pheasant. So also Shu = tree (our Dumi word, less the double prefix), whence Fung shu, a maple, and Poutei shu, a vine. In like manner kai = fowl is added to the specific names for egg, whence Kai-tan vel Kai-lun: and observe that here the two words, being treated as a compound like our fowl's egg, the genitive goes first, minus the mark of case, though kai be in fact as much a generic sign in this instance as in that of Shan-kai = pheasant; and in fact the generic sign may be prefixed or suffixed, and this whether it stand alone or be blended with the numeral. Thus, Shan = mountain. Myung, a proper name: whence Shan myung. So Yat ko yun, or Yun yat ko = a man, precisely as in Newari we say Chha hma manu, or Manu chha hma. In all these respects Chinese agrees entirely with our tongues.

‡ See Girl. There is no proper name for daughter. Own girl is used often. So also Son.

§ Ba Pha Wá vel Wé of Lóhóróng, Bálálí, and the rest is the customary generic sign derived from the word for fowl. See notes at Bird and at Millet. In Dumi and Dungmali the U' vel Um prefix is not the same, but the ordinary articular prefix, as in U-pa, U-ma = father and mother. This prefix and its equivalents ka and ta are almost inseparable in Kassia, and scarcely less common in Gyarung. In the Kirânti tongues the ka and ta prefixes, so common elsewhere, are hardly found, and d, having a sort of relational sense, has not been generalised into a sheer article. So in Khassia the Ka and U, elsewhere generalised, have taken a partitive sense = hic et hæc. It will be shown elsewhere that these special uses do not militate against the essential oneness of the particles in question, both as to origin and function. Thus U-pa, U-ma, vel O-pa, O-ma of these tongues are demonstrably = wo-po, wo-mo of Gyarung, which again has the synonymous forms ta-pe, ta-me = ka-pe, ka-me of Khassia, and Ta-ga-pa-n = father of Tamil, whose ta yu again = mother, is pure Lepcha, as is its alternative form a-yu. Ta-yu vel A'-yu, a mother or wife in Tamil and Lepcha, from the yú root for man, yu-n in Chinese and You-k in Burmese. Just so from the Rí root we have ta-g-rí in Lepcha and Ta-n-d-rí in Telugu (g-rí' in Bodo and Koch) for father, man. Ta-rí, ga-rí, ta-ga-rí = Ta-pa', ga-pá, ta-ga-pa'. G soft k, as d soft t.

‖ In none of the dialects can the pronoun definitive be omitted in father or mother. In Bahing, a change in the root as well as in the definitive occurs (apo for wapa). But this is limited to those two words. See Grammar in sequel. Apa, my father; ipo, thy father; apo, his, any one's father, a father. In Lóhóróng, ungpa is my father; ampa, thy, umpa, his father, a father.

¶ In these two, sá final is the generic sign.

** See note at Hand, page 179. Suffixes blem, pha, phek, phok, with or without the ma, are signs of flat things.

¶ The sá final of this series, as well as the chá vel já of the next series of words, is the generic sign for all grains. It will presently be shown in detail that this fundamental characteristic of Tartaric modes of speech is common (like most others equally normal and essential) to Chinese with all the neighbouring languages of Tibet, Himalaya, Indo-China, and the islands. The word "egg" presents another sample, and the word "plantain" yet another, wa=fowl, and sí =fruit being the respective generic signs.

* This analysis is divided into (A) a vocabulary and (B) a grammatical portion; but both are so framed as to bear on the structure of the language and to dispense with a separate array of rules.

† The h thus marked h' denotes the abrupt tone, which is of very frequent occurrence. The h is often omitted, as cho'mi, little; to'po, strike; cho'no, the nose, &c.

‡ Im is the verb to sleep, and lung and sing are affixes of place and time respectively, but useable only with verbs, with which, however, they form very many useful terms—*e.g.*, múlúng = abode.

§ The repeated final vowel marks the pausing tone, which is as common as the abrupt tone.

‖ Tá is the crude, = Sontal and Uraon Dá, and wo, mi, are the suffixes of gender.

* Kh uttered like kw, deep in the throat.

† Angki thoko is our tribe; angki namsang, our smell; angki múlúng, our dwelling-place. Therefore the suffixes wo, mi, here form derivative substantives, like countryman from country. So also li-wo-mi, male and female archers, from li, a bow; and hengong-wo-mi, a male and female of the Newar tribe (page 240 in the sequel). But in tá-wo-mi, boy and girl, from tá, a child, these suffixes are mere signs of gender. Again, in choti-wo-mi, strong, from choti, strength, they form adjectives from abstract substantives. See and compare the several uses in the sequel.

‡ Gyeti namsang wo, literally one of another smell. It answers to angki namsang wo, one of our own smell, supra.

§ Choo is probably cho'wa, a male child, and cho'mi, a girl, answering to tá-wo and tá-mi. But cho'mi is now chiefly used for a little one, and rather adjectively than substantively.

‡ Wo is masculine suffix; mi, feminine = hal-wala-wali of Hindi.

§ Phokvi, who begets, a parent, answers to bokvi, who is born, a child. Phok, the transitive, is formed normally from bok, to be born, the neuter. Both take the common transitive formative, pingko; and hence bokpingko = phokko, and, at pleasure, phokpingko, which is a double causal in the sense of to cause to be born, or a single in that of cause to beget. This tallying of transitive and causal and this making of double causals are Dravidian traits common, like many more traits, to Váyu and to Kiránti, not to add more of our Himal tongues.

‖ Sé = fruit, generic sign, as phum is for trees.

† See tree's leaf, where also sing only is used. So also in branch of tree, root of tree, flower or fruit of tree. Newari is the same, si hau = sing lo. With the entire tree of all sorts phum is suffixed, as risa phum, plantain-tree = kéla má, Newari.

‡ Khoschyang is the instrumental and dakmung the infinitival form. See Grammar. Both these sorts of words are used as adjectives constantly. Note how nicely the more active agency of the water in cooking is discriminated.

§ The possessive m, mu, is repeated or not, and given either with the pronoun or with the numeral, thus: "of them the two the child" is Wathim nakpom cho'mi or Minung nakpo cho'mi.

‖ Wife or wives is the same. The plural sign kháta is seldom or never added to the noun when the pronoun conveys the sense, or when the verb conveys it, *e.g.*, mescho imchimen, the women sleep.

* Chhe, the dual sign of 2nd pronoun, is not used with 1st and 3rd. The numeral two (nakpo) is substituted.

† I'. this, and mi, that, have the pausing tone. I sometimes represents it by doubling the vowel, ii, mii.

‡ *E.g.*, Hánung gothato'pungmi mii nómi, the hand with which I struck pains me ; literally, what hand with I struck that pains. However much the Tartar tongues eschew relative pronouns, they still can and do use them in this way ; and Newari, which is one of the simpler Himalayan tongues, herein agrees with Váyu, which belongs to the complex class. So also you can say for "call the man who has come" Hánungdo dongmi mii khamto, or, more usually, Phista khamto.

§ See numerals. Nakpo, m. ; Nangmi, f. ; Náyung, neuter, is no doubt the proper form. But these signs are passing out of use, and nakpo is now often used for all persons, male or female.

‖ I nak pum, or Inung nakpo, or Inung nakpum. The possessive nung is peculiar to the demonstratives, which it distinguishes from the adverbs of time and place. Inungmu or minungmu, of him. Inhemu, minhemu, of here, of there. Ithemu, mithemu, of now, of then.

* I or inung, that is, the genitive sign, is repeated at pleasure. Nung and ni, as well as m and mu (and also mi), are genitival and inflexional. Inung, of this person; ini, of this place.

† Wo and mi for rationals; mu for other beings.

‡ True adjectives are rare; most are participles (see on to grammar). In participles the relative pronoun inheres. They can be used as adjectives or any substantives without any affix beyond their own signs (vi ta tang). Thus hónvi, literally who obeys, is used for obedient and for the obeyer. Adjectives that are not participles, if used in the latter way, should have the wo, mi, mu affixes, but need them not if used in the former way—*e.g.*, noh'ka loncho, a or the good man; but ka of noh'ka is probably formative from noh', to be good. Possessive mú also makes adjectives from substantives, as chhomu, bodily, from chho, the body; thummu, mental, from thum, the mind; chhinji, sweetness, chhinjimu, sweet.

‡ Rocho and romi are so generally used substantivally for man and wife that there is some hesitation about the adjectival use of them, though "cho" an i "mi" as suffixes are demonstrably equivalent to wo, vo, and mi. Still, as they are somewhat obsolete, the latter are often now superadded, bing-cho-wo=pulcher, bing-cho-mi=pulchra. Other words of the same form, as bangcho, adult or an adult, are also used in the same two ways, viz., bancho, bangmi, and bangchowo, bangchomi. Compare lon-cho, a man, and mes-cho, a woman, among the substantives. Bo-chho=the white-bodied, a white man, is quite a different affair.

* Hok', a neuter verb, is the source.

† Kwongmu comes from kwong, one; and narungmu, from narung, form. In these, especially in the latter, the possessive sign is needed. Not so in gégé and gyéti, which are pure adjectives. See note at p. 223.

‡ These agree as being derived from intransitive verb jyapche. Jyapvi, who or what changes; jyaptang, who or what is wont or liable to change.

* One great defect of this language (largely participated by the cognate tongues and even by English) is rendered peculiarly observable in its adjectives, owing to their being so very commonly the same with its participles. The defect is this, that all sorts of verbs (neuter, reflex, and transitive), and even the various forms of the same verbal root, are confounded in the participles ; that is, they take identical forms as participles, though the senses be often

very different. Thus náche, kindle thyself or be kindled, and náko, kindle it, and náto, kindle it for him, all alike give návi and náta; and as there is no separate form of the agent, návi is also the kindler. Pains are taken by the multiplication of roots to keep the several sorts of action distinct; but the further distinctions of active, intransitive, and transitive action are lost in the participles by defects of structure in the language. Thus sishta is self-killed and killed by another, and náta is self-kindled or kindled by another, though nátpingta, the causal, may be used to express the latter sense. The defects of English aggravate those of Váyu. Thus a lamp that has been lighted, while it burns, is a burning lamp or lighted lamp, though the last word seems to infer what is past. In Váyu you can similarly say návi or náta tuphi, though návi (trans.) be also the lighter, not the lighted. In English you cannot say the lighting lamp for the lamp that is kindled and burning. In Váyu you cannot use the word burning, which is appropriated to destruction by fire.

* The English senses of the participles eating and drinking must be variously expressed by the participles, infinitive, and gerunds, thus, Don't hinder the eating man, Jovi or jovi singtong thá thikto. By dint of eating, or by excess of eating, he will get ill, Jáhe jáhe nómi (no to be ill and to be). Eating is better than drinking, Tungmungkhen jámung noh'ka. By drinking to excess he got intoxicated, Chhinggnak tungtungha vimi. Drinking water, Dakmungti.

† These last three words mean literally the yellow, the black, and the shining or white. Very much as in English, they are of the same form as substantives and adjectives. They appear to be regarded as feminines, because they have the feminine suffix formative, or mi.

‡ I' and Mi' the demonstratives make ini, inung, mini, minung, for casus constructus; but as khata, the plural sign, seldom admits of inflexion, the sign of the genitive, which is required by the preposition, is attached to the pronoun in singular, sometimes to both, inung khatam. Newári agrees so far that in all the construct cases it rejects the plural sign. Thus ji-ping, we; wo-ping, they, make ji-mi, wo-mi, ours, theirs.

Remark.—The adverbials are declinable like the cardinals, and may be regarded as compound substantives, which should therefore in strictness be put in the locative case, thus, kophe phíne, come ye all at once. But this nicety is little regarded, and kophinakphi la'lam is = he went once or twice. So Newári has as the equivalents of the above chha ko lang wá and chháko niko wana. In general the adverbs, when not gerundial, are subject to declension like the nouns.

---

* "In," the locative, has two forms, bé and é or hé. Wathé = wathi-he and minhe = mini-he, in that; so wanhe = wani-he, in the top. Again, in the hand, eye, head, fire, is bé; gotbe, mekbe, puchhibé, mebe. In the house is kemé, and in the tree, singphum-é. The present gerund has hé, phit-hé; also nung, phit-nung. The words for place and time, or "lung" and "sing," cannot be used with pronouns, only with verbs (mu-lung = place of sitting; lok-sing = time of rising); and hence now and then, here and there, are but in this or that. There is no real difference between the two. The inflective signs ni and nung are equally applicable to both.

† Mini or Minung lomkhen and Wathim lomkhen are the inflected phases of the term. They are as usual and more correct.

How?	Hágna. Hágnáhá. Hánung báha
Thus, in this way	I'mhá. Inung báha
Thus, in that way	Mimhá. Minung báha
Why?	Mischepá
How much?	Háthá. Hayung, n.

* All these save the third are gerunds of past time, and therefore should be Englished, having crossed, &c. A verb must succeed, as, thekthekha la'lam, he went through. Gerunds not only thus express the modes of action, but they link the several members of the sentences, replacing the conjunction "and." Intrinsically relative (conjunctive) participles make up the rest of those links, precisely as in the Dravidian languages.

How many?	Hakpu, m. f.
As much	Hátha? Háyung? Caret
So much	Mitha

Pending his coming	Wáthimáng phitbong
At home	Kém-é
At our house	Angki kemé
In the house	Kémé

* Kolube, literally in one, means in one place. Lung, the affix of place, can be used only with verbs.

† Wanhè = wani hè, in the top; húthè = húti hè, in the bottom. See declension (in Grammar, and where, by the way, these "signs" should have stood.

‡ I'tha, dókha = idher, udher; inhé, minhé = ihán, uhán, or hither and thither, and here and there; the first with less of rest and definiteness. As already noted, the words for time and place (sing and lúng) can only be used in composition with verbs, *e.g.*, mulung, abode; nomolokaing, morning.

* Literally, husband not having obeyed; and the next is husband loved—the usual gerundial style.

† Hengong means what in India is called a banghy, and hengongwo is Indicè banghywala. In the plains every one so carries burdens; in the hills the Newar tribe only; and therefore the other hill tribes, who seldom have proper names for their neighbours, denominate the Newar tribe from that circumstance—*e.g.*, the Khas, who call the Newars nhól boknya, a term having the precise sense of hengongwo. Of chhogong, just below, I could not learn the sense; but the name for a Tibetan is formed precisely like that for a Newar.

Kill, tr.	Sisto. Sissung. Sische (conj. vii.)

* The "s" is essential, as proved by the whole conjugation, which see at pages 290 ff. Nevertheless, in the imperative, as spoken, the sibilant is replaced by an abrupt tone or accent, thus represented, pha'to. As the comparative strikes the keynote to the whole conjugation, its proper form needs much care. In the Grammar I have spared no pains to be correct. To it I refer, merely noting here that in verbs of the 7th conjugation, to which phasto belongs, the abrupt tone stands for a dropped sibilant, which must be restored; and that in conj. viii. and xi. it stands for a dropped consonant, identical with the consonant of the root, and which must be similarly restored. Thus, for to'po we must write toppo, and for pho'ko, phokko, &c. &c.

† These two verbs are used to make causals. Pingko and phásto are often identical; at other times, more or less discriminated in a way that may be best appreciated by a sample. Thus, khut pingko is cause to steal, and khut phasto, make a thief of.

‡ See note at page 261.

Cause thyself to love or be loved	Chhán pingche.	Chhán phásche

* The word, when used in the latter sense, *with* lisi, on account of, is frequently put in the transitive form ang lisi seko, understand it for me. The alternative results from the imperfect development of the voices.

† Compare the transitive and causal transitive. Verbs in tó have no form = Sénto, Páto, &c., or the transitives in ko. The transitives in pó have this form, thus topo has topto; ipo, ipto; pipo, pipto, &c.

‡ Dak, like But: tell is used rather as a passive than active. Its form is passive: its sense both apparently. Dak gnom, I desire or am desired. Daksungmi, I desired or was desired. In Khas, Newári, &c., it is much the same.

Ask, question, tr.	Jiko }
Ask for self, or ask simply, or ask thyself	Jiche } Conj. x.
Ask for me, or me	Jisung }

* This last root, bot', to tell, is only used as a passive. Bot'gnom, I am told; Bosungmi, I was told.

† All these three are used actively also. Cause him to tell his tale; cause thyself to tell thine; cause me to tell mine.

‡ Compare Dávo pásung. This refers to the agent, do thou make speech for me, whereas Giwon posung refers to silence as governing the verb, let silence prevail for me. See remarks on the verbs Páko, Táko, and Jáko. They show signs of a true passive struggling into existence against the genius of the language.

Make thirsty	Tidaksa met' pingko
Make me thirsty or enable me to make or be made thirsty	Tidaksa met' pinsung
Make thyself thirsty or cause thyself to make or be made thirsty	Tidaksa met' pingche

* Any state of body that continues or is to come, like thirsty, sleepy, is expressed by the active participle—if it be supposed complete, like asleep, by the past or passive participle, thus impi yotvi is sleepy; impi yosta, asleep. Met = die, and suksa met' = die of hunger; tidaksa met' = die of thirst, or literally, of want of water.

Be not hungry	Suksa thá met'
Make not hungry	Suksa met' thá ping

Cause me to be amused	Hánpingsung
Be tired, n.	Jyop' ‡
Make tired or tire it	Jyopto
Tire thyself	Jyopche
Tire me	Jyopsung

* The comparison of the roots then and won will show how these tongues attempt to fend off the equivoques resulting from imperfectly developed grammar. Wonto is used as a neuter with transitives, and phasche (not wonche) replaces it with neuters, Top won tungmi, I can strike; Im phaschungmi, I can sleep.

† Literally, amuse thyself with me, along with me. The sense is quite different from that of hánsung, in which I am solely the amused party.

‡ From jyop comes the Newari jyápu, a labourer, though one tongue has lost the noun, the other the verb! See Twist.

Cause me to be tired or to tire	Jyop pingsung

Steal, tr.	Khūko (conj. x.)
Steal for thyself	Khūche
Steal for him, for another	Khūto
Cause to steal or be stolen	Khū pingko‖
Steal not	Thá khu

* Ung bè pénku no, dum; thee in wealth be, become.

† Compare "Take." The pronominalisation of the Váyu verbs prevents a good deal of that difficulty which the Turanians generally experience in furnishing simple equivalents for the words "give" and "take," because the genius of the languages exacts on all occasions a rigid attention to the results of action, the objective as well as subjective results. Different roots, or different modifications of the same roots, must necessarily convey the idea involved in each case.

‡ See remark at Buy. The result of taking is appropriation by self. Hence the intr. verb.

§ Final cho and mi are proper to the sexes. See Adjectives.

‖ Khū phá'to (phasto), make a thief of him.

Cause not to steal or be stolen	Khū thá ping
Deceive, cheat, tr.	Mángpingko (see Forget)
Deceive thyself	Mángpingche

Ditto, ditto, for self	Tánche
Ditto, ditto, for him	Táto
Lift up, raise † from ground, tr.	Rēko (conj. x.), without force. G'uko, gukko (conj. xi. ‡), with force.
Lift up for self	Reche. Gukche
Ditto, ditto, for him	Reto. Gukto

* Neuter duk makes normally transitive and causal tuk. See and compare Bahing, in the sequel. Both tongues alike make double causals in the same way. Compare "Move," p. 412, *ante*.

† Raise on the ground is i'po = erect it or him. as ipche is erect thyself = sit up or stand up. For get up, to a sleeping man, you say sipche; to a sitting man, ipche; to one lying down, buk'. Rise, as respects beings, is ipche or buk' therefore; but as respects the heavenly bodies, the equivalent term is lok' = appear. Specialisation is the soul and body of these tongues, which remedy defects of grammar by multiplication of terms, so as to fend off mistakes in the best way available (see note on Kuko). Quoad falling, ruk' and duk' apply to beings only. The word for things is lik'.

‡ Rēko, like dōko and chhūko, belongs to the tenth conjugation, which has the pausing tone; gu'ko, recte gukko, to the eleventh, with an abrupt tone.

Lift up for me	Resung. Guksung

Cross it under	Kudikha latpingko
Hold, take in hand, tr.	Kuko (see Carry)
Grasp, tr.	Chhūko, chhūche, chhūto (conj. x.)

* Kūko, like all transitives of its class, gives both the active and passive of 3d person, preterite; thus, kukum, he carried or was carried. But what we must call the passive has no imperative. From yu, to descend, you can indeed form kuyu, let thyself or him be carried. In the causal form of the verb both senses of the imperative are conveyed, and hence the causal form is often to be regarded as the only representative in these tongues of the passive; as, for example, in Newári.

† Lumche is cross yourself over, as lakcha (below, voce depart) is take yourself off.

Hold up, support, tr.	Dōko (see Catch)
Let it fall or let it be fallen	Liklayu

Cultivate it for me or my land	Vik yeksung

* So also Bek' = enter, is *come* in, and Bek'la is *go* in.
† Thongto gives normally the double causal thongpingko.
‡ Italic *H* is a guttural. The two phrases are synonymous.
§ This word means "clear the jungle," and alone suffices to show the state of the country and of the people.

Cultivate it for him or his land	Vik yekto
Cultivate for self	Vik yekche

Make for self	Jéwa pinche
Make for him	Jéwa pito
Spin, tr.	Chingko, chingsung, chingche, chingto §
Spin not	Thá ching

* See Eat and Take, and Exchange and Drink, &c. In every act, of which the result returns to self, this form is preferred to the transitive. The French tongue affords a good clue.

† I have already said that buy me seems to be the truer sense, whence the passive ingsungmi, I was bought. But in the class of transitives to which ingko belongs, ingsungmi is also the present and future tense of the active voice, viz., I buy it or will buy it. Ingche, the intransitive, gives ingchung mi in both tenses, I buy (*i.e.*, will buy) and I bought.

‡ This form solves the difficulty as to two transitive signs following a verbal root, and enables me often to reach the primitive monosyllabic type of words—a thing of the highest import to special and general philology. [This note should stand, if at all, as a mere query.]

§ Chingko and pungko are conjugated like pingko, which see in the sequel.

* Observe that this examination of the Váyu tongue, like the following one of the Bâhing tongue, is divided into (I.) a vocabulary and (II.) a grammatical portion, but that both are so constructed as to complement each other in illustrating the structure of the languages in question.

† Ang, the constructive form of gó, means my before a substantive or qualitative used substantively, but before a transitive participle it means me or of me, *e.g.*, ang tovi, who beats me, or the beater of me. Yet ang topchyáng is my club, topchyáng being the neuter form of tovi, used as a noun.

‡ There is no proper privative participle, nor, consequently, case. Ang má nosa or gó má nosa = if I be not, I not being, or my not being (present). In Khas, man na bhai; in Newari, ji ma dusa.

§ Nakpo, náyung is the second numeral which is gendered when used apart, but doubtfully I think, and still more so when used as a dual sign. I find, however, nakpu, nangmi, nayung, for the three genders. Also hic et hæc nakpu.

And so on, like wathi, except that hanung has no inflexional shape (itself being inflexional). Hence it has hanung nakpo and hanung khata where wathi has wathim nakpo and wathim khata. And this is likewise the case with the possessive pronouns, all of which, though but genitives of the personals, are regarded as independent, and declined like the personals.

Thus also are declined the interrogative and relative of number and quantity, with its correlative, or Háthá, Mitha = how much or many? and so much or many. Thus also the adverbs of time and place, Inhe, here, Wathe and Minhe, there; Hanhe, where? Ithe or Umbe or Abo, now; Mithe, then; Hákhe, when? with all the rest of the adverbs that are not gerunds.

Observe that these adverbs are derived from the demonstratives in the locative case. But where I, Mi, and Wathi, the pronouns, take the inflexional m, or nung (whence come inungmu and wathimmu = his), the corresponding adverbs have no inflexional mark, but remain immutable, only adding the declensional signs m or mu, be, khen, &c.; and thus we have ithamu and inhemu, of here, and ithakhen, inhekhen, from here, and abomu, of now, abokhen from now, not abommu, abomkhen.

Observe also that the conjunct possessives (genitives of the personals) are indeclinable, but that the disjunct are declinable like the personals. Ang, ung, wathim inung, minung, are inflexional forms merely, therefore angkhen = from me. But angmu is a possessive pronoun proper, whence angmukhen-be-ha = from mine, in mine, by mine.

2. *Declension of Nouns (Substantive).*

I. Substantives Proper.

Lóncho, a man, m.

N.	Lóncho	
G.	Lóncho, conj.†	Lónchomu, disj.
D. Ac.	Lóncho	
L.	Lónchobe	
Ab.	Lónchokhen	
Ins.	Lónchoha	
Soc.	Lónchonung	

DUAL.

N.	Lóncho nakpo ‡

* The conjunct form of the genitive of this pronoun has no sign, being marked by position alone, as when two substantives meet is always admissible. Hánung is itself a genitive = of whom, of which, *e.g.*, hanung got ha = of which (and which) hand; hanungmu = whose, apart, or in reply; hanungmu got = the hand of whom; hanung got = which hand.

† The first of two substantives is by position alone a genitive, as loncho got, the man's hand. But apart, it must have the sign, as lonchomu, the man's.

‡ Generally in the Himalayan languages, the dual and plural signs are eschewed in regard to substantives proper, except where ambiguity would arise from omitting them. In regard to appellatives and qualitives used substantively, as all may be, these signs are always annexed, and also those of gender, because such words (and pronouns of the third person also, to which the same rule applies), unlike the former, tell nothing of themselves on these points. Váyu, however, freely applies its dual and plural signs and its sex signs, where it has any, to all nouns and pronouns, though the structure of its verb renders such use of the dual and plural signs superfluous, *e.g.*, béli imchimem, the sheep are sleeping. Newari, though void of such help, lacks a dual and plural of neuters.

G.	Lóncho nak pum,* conj.	Lóncho nak pumu, disj.

Thus also is declined the feminine noun mescho, a woman ; the epicine noun singtong, mankind ; and all such without reference to gender. Neuters also are similarly declined. But I add a specimen—

Sing, wood, a neuter.

---

* We should rather read nakpu and khata for the reason given in a prior note. Yet my informants, though they never apply the genitive to the conjunct form of this case in the singular, do so in the dual and plural.

† See note (:) on previous page.

So also Topta, who or what has been beaten, m. f. n., with the requisite adaptation of nakpu, nangmi or náng (náyung) in the dual.

3d. Qualitives used substantively, *e.g.*,
Khakchhing-wo, m.
Khakchhing-mi, f.
Khakchhing-mu, n. and c.
} =the black one, being or thing.

This and all the like are declined as above. And so also are the qualitives which substitute the formative "cho" for "wo" in the masculine, as bang-cho, a mature man; bing-cho, a handsome man, &c. The feminines of these are in "mi," as in the last. They have no neuters in this form, but they can superadd the usual m. f. n. signs, as bang-cho-wo, a mature man; bang-cho-mi, a mature woman; bang-cho-mu, a mature thing; and then of course they have the complete hic, hæc, hoc of gender.

4th. The numerals, inclusive of the adverbial ones.

5th. Derivative qualitives formed from abstracts, as Daksa-wo, the covetous man; daksa-mi, the covetous woman, from daksa, covetousness. Choti-wo, the strong man; choti-mi, the strong woman; choti-mu, the strong thing, from choti, strength. Suksa-wo, the hungry man; suksa-mi, the hungry woman, from suksa, hunger; and all such.

6th. Nominal as well as pronominal genitives, which, with the m or mu formative, are all treated as distinct substantives, *e.g.*, singmumu, the wooden one. (*Remark.*—The cacophonous iteration of the mu (though often truncated in the second syllable, singmum), owing to the coincidence of the genitival and formative signs, makes the use of such words rare when a possessive case meaning must be assigned to them. They are used, however, freely in all other cases.)

7th. Simple or compound words indicating one's country, profession, or avocation, and the like, and which are not expressed participially,* form yet another class of substantives, as Chhugong-wo=a Bhotia, or native of Tibet; Chhugong-mi, a Bhotini, or female of Tibet; Héngong-wo (m.); Hengong-mi (f.), a male and female of Nepal proper; Gyétimuamsang-wo-mi, a male and female stranger or foreigner; Rukcho-wo-mi, a male and female ploughman; Bóchhó-wo-mi, a male and female European (white-body); Gáginmulung-wo-mi, a male and female of the plains. In short, nouns of whatever sort (and the above enumeration has been made here, though not strictly germain to declension, expressly to show the various sorts of nouns and their mode of construction), and pronouns also, wherever used substantively or disjunctly, and therefore declinable, all follow the above single form of declension. And, on the other hand, every noun and pronoun when used conjunctly, that is, preceding a substantive which is thereby qualified, is always indeclinable, and, for the most part, altogether unchangeable, having no expressed grammatical affections whatever, the signs of genders being neglected in use even where they exist. Indeed, qualifying and qualified words seem to be as much as possible regarded as constituting a single compound term; and, the more effectually to ensure this, one of the two elements (the one that goes first in the compound) is customarily truncated; thus risa, a plantain, and singphum, a tree, make risaphum; and topmung, to strike, and rámum, I fear, make toprámum. And so also the inflexional forms of the personal pronouns which are used as qualifying or adjectival words, are to be regarded as quasi agglutinated and perfectly immutable prefixes of the substantive, entirely distinct from the correspondent pronouns of the possessive kind, which latter stand apart and are liable to declensional changes after the above model, like all other qualitives used substantively or disjunctly.

---

* The participles (in vi, ta, and táng), being inherently relative, assume a substantival character without the necessity of affixing the usual appellative formatives in wo vel cho and mi, though these may be superadded, if to mark the sex of the agent be specially required. Thus to'vi, the striker, the he or she who strikes, is not only an adjective, as to'vi ta'wo, the beating boy, but an independent noun, the beater. Nevertheless, would you specify the sex, you can say to'vi-wo, the male striker, and to'vi-mi, the female striker.

VAYU VERBS.

First.—Conjugation of neuters, conjugated from the sheer root.

Verb *Phi*, to come.

Infinitive Mood.

Affirmative.—Phit'mung, to come or to have come, aoristic.*
Negative.—Máng phit'mung, not to come, &c.

Gerunds.

Phit'he, Phit'nung } Present. Coming { Phit'he, with verbs in present tense. Phit'nung, with verbs in preterite.
Phit'hephit'he, or Phit'nung phit'nung, continuative present.
Phit'phit'ha. Past, having come.
Phit'singhe. Present or Future, when coming.
Phit'khen. Past, after coming, after having come.

Participles.

Phit'vi. Present and future, who or what comes or will come. Also the comer substantival.
Phis'ta. Past, who or what has come or came.
Phit'táng, Verbal nouns, Phit'chyang, Phit'lung, Phit'sing, } These forms, expressing respectively *passive* futurity or fitness or habit, and instrumentality, locality, and time, are hardly or not at all useable, save with verbs more or less transitive. See on to them in sequel.
N.B.—The medial t' and s' are merely enunciative, not formative.

Imperative Mood.

Singular.	*Dual.*	*Plural.*
Phí	Phíchhe	Phíne
	Negative.	
Thá phí	Thá phíchhe	Thá phíne

Indicative Mood.

Future tense, used also for present.

	Singular.	*Dual.*	*Plural.*
1.	Phígnom	Phí chhokmi, excl. / Phí chhikmi, incl.	Phíkokmi, excl. / Phíkem, incl.
2.	Phímí	Phí chhikmi	Phínem
3.	Phimi	Phi chhikmi	Phímem
		Preterite tense.	
1.	Phísungmi	Phí chhongmi, excl. / Phí chhingmi, incl.	Phí kikóngmi, excl. / Phí kikengmi, incl.
2.	Phímí	Phí chhem	Phínem
3.	Phímí	Phí chhem	Phímem

Subjunctive Mood.

Present tense.

1.	Phígno, nam or sa	Phí chhoknam, excl. / Phí chhiknam, incl.	Phí koknam, excl. / Phí kenam, incl.
2.	Phí-nam-sa	Phi chhiknam	Phíne nam
3.	Phí-nam-sa	Phi chhiknam	Phíme nam

* The infinitive is also used adjectively, and is nearly the same as the participle in "tang," *e.g.*, phitmunglom or khokmunglom, a way to go by, an accessible road; khoktanglom, a walkable road, a road fit for walking.

Preterite.

1. Phisung phen	Phí chhong phen, excl. Phi chhing phen, incl.	Phí ki kóng phen, excl. Phi ki keng phen, incl.
2. Phí phen	Phi chhe phen	Phi ne phen
3. Phí phen	Phi chhe phen	Phi me phen

INTERROGATIVE MOOD.

Present tense.

Singular.

1. Phigno ki má
2. Phí ki má
3. Phí ki má

} And so on, as in the subjunctive; that is, the terminal m or mi is dropped, and ki má, = or not, is added in lieu of the subjunctive signs, nam or sa and phen.

NEGATIVE MOOD.

There is no separate negative verb.

The affirmative verb is conjugated with má, the particle of negation, before it, Má phi gnom, Má phi sungmi, &c.

POTENTIAL MOOD.

Singular.

1. Phit' phas chungmi
2. Phit' phas chem
3. Phit' phas chem

} For all tenses, phasche being aoristic except in dual and plural. Phasche, the reflex form of the verb phá, is conjugated with the root phi to express power. For phasche see im'che in sequel, or 5th conjugation.

PRECATIVE MOOD.

Singular.

Present.	*Preterite.*	
1. Phi guó yu	Phisung yu	Drops the final m or mi of the ordinary verb, and substitutes for it the immutable verbal participle yú.
2. Phi yu	Phi yu	
3. Phi yu	Phi yu	

Another form of the precative mood, equivalent to that which is usually joined with the imperative in English (let me come, come thou, let him come, &c.), is formed by compounding the infinitive of the main verb with the verb to give, used as an auxiliary, thus (omitting the 2d person, or imperative proper, which never can be mixed with any other mood):

Singular.	*Dual.*	*Plural.*
1. Phimsung hásung	Phimung háchgong	Phimung hátikong
3. Phimung háto	Phimung hátochhe	Phimung hátome

The first ordinary form of the precative may be best rendered in English by O! that I may or might come, &c.; this, by, let me come, let him come, &c., literally, give me to come, give him to come, and so on for the dual and plural according to the model of transitives in "to" in sequel.

OPTATIVE MOOD.

Singular.

1. Phit' dakgnom	Phit' daksungmi	And so on throughout the verb dak, to desire or want, which see in sequel. The root of the primary verb is prefixed.
2. Phit' dakmi	Phit' dángmi	
3. Phit' dakmi	Phit' dángmi	

Remark.—Duty, necessity, and propriety, as well as desire, are expressed by this mood, often in the impersonal form, mihi oportet vel decet, thus, go phit dakmi, I must, I ought to, come, it is necessary or proper for me to come; you can also say, go phitmung noh'ka, it is good for me to come.

INCHOATIVE MOOD.

Singular.

1. Phit' teschungmi
2. Phit' teschem
3. Phit' teschem

} And so on, according to the paradigm of intransitives in che; this mood being constructed from the root of the main verb and the reflex form of the verb to begin.

Finitive Mood.

Singular.	
1. Phit' chuschungmi	And so on, as before noted, chusche being the reflex form of the verb to end.
2. Phit' chuschem	
3. Phit' chuschem	

Causal Mood.

Present.	*Preterite.*	
1. Phit' pingsungmi	Phit' ping kungmi	And so on, for dual and plural, throughout the verb pingko, which see. The root of the primary verb is prefixed.
2. Phit' pingmi	Phit' ping kum	
3. Phit' pingmi	Phit' ping kum	

Continuative Mood.

Present tense.

Singular.	*Dual.*	*Plural.*
1. Phína phit'nognom	Phína phit'nochhokmi Phína phit'nochhikmi	Phína phit'nokokmi Phína phit'nokem
2. Phína phit'nonum	Phína phit'nochhikmi	Phína phit'nonem
3. Phína phit'nomi	Phína phit'nochhikmi	Phína phit'nomem

Preterite.

1. Phína phit'nosungmi	Phína phit'nochhongmi Phína phit'nochhingmi	Phína phit'nokikongmi Phína phit'nokikengmi
2. Phína phit'nonum	Phína phit'nochhem	Phína phit'nonem
3. Phína phit'nomi	Phína phit'nochhem	Phína phit'nomem

Reciprocal Mood.

Present tense.

1. Phina phit'pánchungmi	Phina phit'pánachhokmi Phina phit'pánachhikmi	Phina phit'páchikokmi Phina phit'pachikem
2. Phina phit'pánchem	Phina phit'pánachhikmi	Phina phit'páchinem
3. Phina phit'pánchem	Phina phit'pánachhikmi	Phina phit'páchimem

Preterite.

1. Phina phit'pánchungmi	Phina phit'pánachhongmi Phina phit'pánachhingmi	Phina phit'páchikongmi Phina phit'páchikengmi
2. Phina phit'pánchem	Phina phit'pánachhem	Phina phit'páchinem
3. Phina phit'pánchem	Phina phit'pánachhem	Phina phit'páchimem

Remark.—Of the above two the first mood is formed by the root repeated with intervening reflex sign, and the substantive verb nó, to be. The second is formed by the same treatment of the root and the reflex form of the verb pá, to do, for which see conjugation V. The second, or reciprocal mood, is hardly useable in the singular number.

According to this paradigm of the neuter verb to come, are conjugated also the verbs gá, to be dilatory; ji, to ripen (fruit); rí, to rot; sé, to fruit; gó, to live; yú, to descend; ví, to be intoxicated; phwé, to quarrel; and, in a word, all words presenting a sheer root in the imperative, and which are all neuters. Essentially the same is the conjugation of neuters having added to the sheer root a conjunct and now (quoad force or meaning) obsolete consonant,* which consonant, however, according as it is labial, guttural, or dental, occasions some slight variations in the form of conjugation. Nasal endings make no change (*e.g.*, dong gnom, dongmi dongmi). I subjoin a sample of each variation.

Second.—Conjugation of neuters with a conjunct guttural, dak', to desire (da-k).

---

* Compare the so-called "euphonic additions" to the root in the cultivated Dravidian tongues.

INFINITIVE MOOD.

Affirmative. Dakmung, } ut supra.
Negative. Máng dakmung, }

Gerunds.		*Participles.*	
Dak he	ut supra.	Dakvi	ut supra.
Dak nung		Dakta	
Dak he dak he		Daktang	
Dak dak ha		Verbal nouns	
Dak sing he		Dak chyang } not	
Dak khen		Dak lung } useable.	
		Dak sing	

The negative of all is formed as in the infinitive, máng dak he, máng dak vi, &c.

IMPERATIVE MOOD.

Singular.	*Dual.*	*Plural.*
Dak'	Dakchhe	Dángne
Negative Imperative.		
Thá dak	Thá dakchhe	Thá dángne

INDICATIVE MOOD.

Present Tense.

Singular.	*Dual.*	*Plural.*
1. Dak gnom	Dak chhokmi, excl. / Dak chhikmi, incl.	Dak kokmi, excl. / Dak kem, incl.
2. Dakmi	Dak chhikmi	Daknem
3. Dakmi	Dak chhikmi	Dakmem

Pretcrite.

1. Daksungmi	Dak chhongmi / Dak chhingmi	Dak'ki kongmi, or Dáki kongmi / Dak'ki kengmi, or Dáki-kengmi
2. Dángmi	Dak chhem	Dak nem or Dángnem
3. Dángmi	Dak chhem	Dakmem

This conjugation changes the radical k into ng, and lengthens the vowel.

The other moods as before.

Thus are conjugated buk', to get up ; bok', to be born ; bek', to enter ; lok', to issue, to appear ; gik', to flow ; kák', to shine (sun) ; chok', to glow (sun) ; jik', to be broken ; jok', to come up ; duk', to fall from aloft ; ruk', to fall on ground ; ok', to weep ; hok', to be prosperous ; juk', to be wise, and all such words, as also the compounds épidak, cacare, chépi dák, mingere, tídak, to be thirsty.

Third.—Conjugation of neuters with a conjunct labial (m or p) : I. in m. Dam to be full and to be lost, or to fill and to lose in the intransitive senses.*

Infinitive and participles as before.

IMPERATIVE.

Affirmative	Dam	Damche	Damne
Negative	Thá dam	Thá damchhe	Thá damne

* The Váyu neuter and passive conjugations coincide, and the expressions often tally with the equivalent English ones, as dámi, it is lost, and it is filled or full—that is, self-lost and self-filled. But the Váyu reflex verb, like the French, can express the latter meaning otherwise, viz., by damchem, which is equivalent to dámi, used neutrally. Dam lá lam is another equivalent form, answering literally to khógayá in Urdu, though Váyu never forms its passives like Urdu.

INDICATIVE MOOD.

Present Tense.

1. Dámum (Dammum)	Dam chhokmi, excl.	Dámpopmi	This conjugation changes gnom into mum and kokmi, kem into popmi, pem, besides lengthening the vowel.
	Dam chhikmi, incl.	Dámpem	
2. Dámi	Dam chhikmi	Damnem	
3. Dámi	Dam chhikmi	Dámem	

Preterite.

1. Dam sungmi	Dam chhongmi, excl.	Dámpi kongmi	
	Dam chhingmi, incl.	Dámpi kengmi	
2. Dámi	Dam chhem	Damnem	
3. Dámi	Dam.chhem	Dámem	

The other moods as before. In subjunctive, dámonam, damnam, damnam. Thus also conjugate ram, to be afraid, dum, to become, &c.

II. in p. Jyóp, to be tired.

IMPERATIVE.

Aff. Jyóp'	Jyop'chhe	Jyómne	This conjugation changes p into m and lengthens the vowel. As in the last kokmi, kem becomes popmi, pem.
Neg. Thá jyop	Thá jyop'chhe	Thá jyóp'ne	

INDICATIVE.

Present.

1. Jyop' mum	Jyop chhokmi, excl.	Jyoppopmi	
	Jyop chhikmi, incl.	Jyoppem	
2. Jyop'mi	Jyop chhikmi	Jyopnem	
3. Jyop'mi	Jyop chhikmi	Jyopmem	
1. Jyop sungmi	Jyop chhongmi	Jyópikongmi	
	Jyop chhingmi	Jyópikengmi	
2. Jyómi	Jyop chhem	Jyómnem	
3. Jyómi	Jyop chhem	Jyómem	

Other moods as before. Subjunctive has jyop'monam, jyop'nam, jyopnam, jyopsung phen, jyóm phen, jyóm phen.

Thus also conjugate thíp, to set (sun), yép, to be sharp-edged, &c.

Fourth.—Conjugation of neuters with conjunct dental (t).

Hot', to utter, talk.

Infinitive and participles and gerunds as before.

IMPERATIVE MOOD.

Singular.	*Dual.*	*Plural.*	
Aff. Hot'	Hoschhe	Hóne	This conjugation changes the t into n, and retains the t before the plural kokmi kem, which are unchanged. It lengthens the vowel as usual.
Neg. Thá hot'	Thá hoschhe	Thá hóne	

Indicative Present.

1. Hot' gnom	Hoschhokmi, excl.	Hot'kokmi	
	Hoschhikmi, incl.	Hot'kem	
2. Hot'mi	Hoschhikmi	Hot'nem	
3. Hot'mi	Hoschhikmi	Hot'mem	

Preterite.

Singular.	*Dual.*	*Plural.*
1. Hosungmi	Hoschhongmi	Hotikong mi
	Hoschhingmi	Hotikeng mi
2. Hónmi	Hoschhem	Hónem
3. Hónmi	Hoschhem	Hónmem

Thus conjugate pat', to fight; met', to die; but', to flower, &c.

Remark.—The verbs dung, to be dry; dong, to arrive; then, to win; yáng, to

lose or decrease; min, to be ripe; hon, to be big; bon, to fly; lun, to run, and all others ending in a nasal (n or ng) follow without change the sheer root paradigm or phí aforesaid.

5th.—Conjugation of reflex or active intransitive (including also some neuters) verbs in che, that is, which have this (the only) reflex sign added to their root in the imperative, which always strikes the keynote to the several conjugations, always having the formative affix whenever there is one.

Im, to sleep.

INFINITIVE MOOD.

Aff.	Immung.	To sleep or to have slept	aoristic
Neg.	Máng immung.	Not to sleep, &c.	aoristic

Remark.—Ĭ-mung is as often used as immung; so that ĭ may possibly be the root, not im.

Gerunds.		*Participles.*		
Im he	ut supra	Imvi (iṃvi)	not useable	ut supra
Im nung		Imta		
Im im há		Imtáng		
Im sing hé		Verbal nouns		
Im khen		Imchyáng		
		Imlung		
		Imsing		

Negatives as in infinitive; that is, by prefixing máng.

IMPERATIVE MOOD.

Singular.	*Dual.*	*Plural.*
Aff. Imche	Im náchhé	Imchíné
Neg. Thá imche	Thá imnáchhé	Thá imchiné

Indicative Present.

1. Imchungmi	Imnachhokmi / Imnachhikmi	Imchikokmi / Imchikem
2. Imchem	Imnachikmi	Imchinem
3. Imchem	Imnachikmi	Imchimem

Preterite.

1. Imchungmi	Imnachongmi / Imnachingmi	Imchikongmi / Imchikengmi
2. Imchem	Imnachhem	Imchinem
3. Imchem	Imnachhem	Imchimem

Thus are conjugated all reflex verbs whatever having the che sign, whether they be primitive or derivative (and all transitives can be so* commuted), as chikche, to remember; mángche, to forget; lische, to learn; musche, to sit; ipche, to get up; khokche, to walk; pipche, to suck; sipche, to wake; lipche, to vomit; popche, to lick; kinche, to lie hid; lunche, to run; dénche, to bathe; upche, to wash oneself; tesche, to begin; chusche, to end; khwénkhwén pánche, to cough; khikche, to sneeze; líche, to grow (plant only); gosche, to be rich; vekche, to contain; dosche, to sustain or hold up; dunche, to dig for

* Consequently every transitive has a reflex form or middle voice as well as an active and passive; but as the middle voice in transitives always tallies with the above paradigm, which includes many verbs originally, and some that are solely intransitive, with some neuters even, iit must suffice to give it here once for all. The verbs enumerated will show that this conj. tn "chi" is very comprehensive, and admits of many fine shades of meaning. Thus, lische, to learn, means to teach thyself, opposed to listo, to teach another. Again, not only functional action, but any of which the effort returns to the agent, as in buying and taking, must be primarily expressed in this form, *e.g.*, ingche, is buy; ingko, buy it—a Hungarian trait.

oneself; phasche, to be able; wónche,* to master oneself, be patient or firm; bongche,* to be happy; giwón pónche, to keep silence; rusche, to flee away; kwompánche, to sing; yángche, to decrease or lose; jonche, to grow or increase (animal only); yukche, to cut oneself; sische, to kill oneself; tánche, to put for oneself; senche, to know oneself or to know simply; hánche, to give to oneself; phokche, to beget or give birth to for oneself; ingche, to buy; jyápche, to exchange; khwásche, to tighten oneself; *kh*wásche,† to feed oneself; túnche, to drink; jáúche, to eat; chénche,‡ to piss; topche, to beat oneself; yosche, to like, &c. &c.

Remark.—These verbs are aoristic in fact, though in the dual and plural they are obliged to accommodate themselves to the inflexible forms of those numbers; and such (by and by will be seen) is the case also with the aoristic transitives in "to." The reflex duals and plurals, however, always retain their own special signs, or na and chi, which are interchangeable for the sake of euphony, na being preferred to chi in the dual to prevent cacophonous repetition of the ch.

6th.—Conjugation of transitives in "to" not having a precedent sibilant.

The verb Há, to give.

INFINITIVE AFFIRMATIVE.

Hámung, to give or to have given, aoristic.

INFINITIVE NEGATIVE.

Máng hámung, not to give, &c.

GERUNDS.

Há he	Present, giving	With main verb in present or future

NEGATIVE MOOD.

Singular Indicative Present.

1. Má hátungmi
2. Má hátum
3. Má hátum

Dual and plural in like manner, merely by prefixing the negative particle má. *N.B.*—Háto and all other transitives of its class are essentially aoristic. See remark aforegone.

INTERROGATIVE MOOD.

Singular Indicative Present.

1. Hátung ki má
2. Háto ki má
3. Háto ki má

Dual and plural in like manner, and all the rest of the verb also; that is, cut off the final mi or m and substitute ki má.

---

observe, once for all, that the singular, dual, and plural, coming first in the conjugation, denote the agents; the dual and plural coming afterwards, the objects. In Váyu, as in Bahing, the complete fusion of all agents and objects with the action is the chief peculiarity of these tongues, indicating their close affinity with the Ho, Sontal, and Munda tongues. In the passive voice the position of agents and objects is reversed, if not necessarily, at least usually (see on to p. 286). Owing to the inseparability of actors and action, it results, first, that in the ordinary conjugation many forms are common to the active and passive voices; second, that certain special forms are needed (see p. 287) to eke out all the varieties of conjugation.

* The starred and bracketed portions express the peculiar forms of this language.

The mark + before any form signifies that it belongs also to the passive, which see. The difference is expressed in such cases by the use of the separate prefixed pronouns in the instrumental case for the active; in the objective or accusative case for the passive, or g'ha, gonha, wathiha, and go, gon, wathi for the three persons singular, and so on for dual and plural.

as they are constituted by transitives, they take, like transitives, the reflex and passive and double objective forms, being conjugated from pingche and pingsung and ping (k) to, as well as pingko. The reflex of háto is hánche, conjugated like imche; the quasi passive is hásúng, for which see On. Háto has no doubly objected form. Itself expresses give it to him or give him.

* These are all of the object, those of the agent coming afterwards. See note ‖, p. 283. Gives me (not to me) = I am given, &c.

† Observe that in the passive I, the speaker, am the object (therefore me is better than to me); in the active intransitive or middle voice, self, the spoken to; in the active transitive, he, she, it, the spoken of. Hence há-sung, há-n-che, há-to, as the bases of the whole system of conjugation.

‡ The forms marked with a cross precedent (+) are common to both voices. See Active. There is no infinitive of this quasi passive. The causal transitive which carries a passive as well as active sense has it: thus hámung, to give; hápingmung, to be given; more properly, to cause to give. So Newári has biye, to give, bíyeke (ke the causal sign) to be given or cause to give. Newári has no other semblance even of a passive. Váyu, with its suffixed objective forms of the pronoun, has, as above seen. But this again is weakened by the special restriction of the suffixes; thus hánum, gives or gave to thee, *I only* and no other.

* The star and bracket as before explained.

* { 3. + Hátochhem Gave to him they two
  { 3. + Hátomem Gave to him they all

1st.—I to thee.

Hánum	Give or gave to thee I only	aoristic
Hánochhem	Give or gave you two I only	
Hánonem	Give or gave to you all I only	

2d.—Thou to me.

γHágnom	Givest to me thou (or he)	Present tense*
γHagnochem	Give to me ye two (or they two)	
Hagnomen	Give to me ye all only	

* The forms preceded by the mark γ are not special, but are repeated here to illustrate such as are special. Compare the whole with those of the Peruvian language of America apud Markham, p. 397. There are slight differences indicating diverse degrees of decomposition, but the resemblance in substance and principle is wonderful. I commend it to those who so dogmatically tell us it is not legitimate philology to heed such coincidences.

γHásungmi	Gavest to me thou	} Preterite
γHásungchhem	Gave to me ye two	
Hásungnem	Gave to me ye all	

Thus are conjugated all transitives in "tó" that have the root only precedent, as wóto, to cleanse; láto, to snatch away; chíto, to split; jito, to tear; phóto, to eradicate; chéto, immingere; ríto, to cause to rot or rot it; líto, to cause to grow, or grow it; hito, to count; jeto, to heat; kheto, to break; súto, to plaster; gnúto, to blunt; ruto, to staunch; thuto, to divide; wóto, to cleanse; &c. The verbs with a "p" before the sign, as lipto, to vomit; upto, to wash; hopto, to squander: jupto, to throw; napto, to compress—change the p into m in the plural imperative and in the second person plural preterite, as namne, do ye all compress, and namnem, ye all compressed. Those with a "k" before the sign, as thiktó, to shut; khikto, to cause to sneeze—change the k into ng, as thingne, do ye all shut, and thingnem, ye all shutted it. No other precedent letter makes any change, save the sibilant to, which we shall next proceed, as forming a different conjugation. Meanwhile conjugate as above, hanto, to cause to swim; thunto, to drink; thumto, to sink; dento, to bathe; another (not self); yangto, to make yield; khunto, to reveal; lumto, to transport; khungto, to make stoop; yángto, to decrease; bongto, to please; mangto, to cause to forget or to forget him; phimto, to depress; khámto, to summon; *kh*amto, to frighten; thento, to cause to win; yemto, to burn; umto, to burn corpse; wónto, to win, to be able* pélto, to wring or extract juice; tamto, to cry out; damto, to fill, &c., &c.

Seventh conjugation of verbs in "to" having a precedent sibilant (always palpably felt in the reflex, sometimes not so in the transitive, wherein something like an abrupt tone, however, indicates in such cases its latent presence, or else a sound like English th or ph, as phá'to, múphto, hóthto for phásto, músto and hósto. But observe, there is no true tone as in the eighth and eleventh conjugations (to'po and pho'ko), and the real euphonic intercalary letter is the sibilant s).

* Another form = sinmi, sitmi, sitmi, is sitvi nognom, sitvi nonum, sitvi nomi, and so on, formed by active participle and substantive verb.

† Compare with sinmi, sitmi, sitmi, the correspondent syána, syáta, syáta of Newári. The root (si, sá vel syá) and the augments (n and t) are alike and alike disposed, that is, the augment following the root. So also in both tongues the augment of the second and third person, or t, constitutes the passive in all three persons, si-t-gnom ; si-t-mi, si-t-mi = Newári syá-ta, syá-ta, syá-ta. The si-t of the one is precisely the sya-t or sha-t of the other, the t being that mark of action, apart from one's own, whereby the passive (with the help of the separate prefixed objective pronoun in both tongues alike) is denoted. And yet these two languages have all the superficial marks of wide contrariety and opposition. In the vocabulary I have pointed attention to identical roots or words used verbally in one of these tongues, substantively in the other, or of which the one has the primitive, the other the derivative. What I would imply is that identical roots and constructive principles may be found in this family of tongues where one would least expect to find them.

‡ S nem, like séne in the imperative, must be an error, though insisted on to me. Séko, to know, gives sénem and séne regularly, as sisto, to kill, gives sitnem and sitne. In the intransitives we have respectively senche and sische.

* The brackets and the initial crosses (+) refer, as before explained, to forms of the verb scarcely reconcilable with our ideas of conjugation, and yet not easily separable from such as are so, *and* to forms common to the active and passive voices; see further on for another view of the subject.

The optative mood is precisely similar to the optative active. The negative mood is formed, as before, by merely prefixing the particle of negation, or má.

INTERROGATIVE MOOD.

Present.	*Preterite.*	
1. To' mo ki má	Topsung ki má	Dual and plural by dropping m or mi final and substituting the interrogative form
2. +Top ki má	Tom ki má	
3. +Top ki má	+To'po ki má	

Subjunctive mood by substituting nam and phen for ki má, according to tense.

POTENTIAL MOOD.

Present (or Future).	*Preterite.*	
1. Top wonngnom	1. Top wonsungmi,	and so on, conjugating with the passive of wonto like the passive of hato
2. Top wonmi	2. Top wonmi,	
3. +Top wontum	3. +Top wontum,	

PRECATIVE MOOD.

Present.	*Preterite.*	
1. To'mo yu	1. Top sung yu	Dual and plural as in the indicative, substituting yu for the final m or mi
2. +Top yu	2. Tom yu	
3. +Top yu	3. +To'po yu	

CAUSAL VERB.

Formed as before with the passive of pingko * added to top'. Top pinggnom, &c., top pingsungmi, &c. Like the above paradigm of roots in 'po are conjugated also chi'po, to defecate; wo'po, to shoot; i'po, to raise (make get up); du'po, to kindle; khi'po, to make rope; pi'po, to suck; po'po, to lick; yo'po, to take off; chho'po, to sharpen, and all others having no consonant but an abrupt tone (standing for truncated p) before the transitive sign.†

A second form of passive is constructed from the past participle and the auxiliary verb, as aforenoticed, thus—

1. Topta nognom ‡
2. Topta nonum
3. Topta nomi

} &c., according to the model of sheer neuters (see phi).

SPECIAL FORMS.

I.—I and thou.

S. Top num	I (only) strike or will strike or struck thee	Aoristic.
D. Topnochhem	I (only) strike or struck you two	
P. Top nonem	I (only) strike or struck you all	

II.—Thou and I.

S.γ Top'mum	Thou strikest or wilt strike me	Present and future.
D.γ Top' mochhem	Ye two strike or will strike me	
P. Top' monem	Ye all strike or will strike me	
S.γ Top sungmi	Thou struckedst me	Preterite.
D. Top sungchhem	Ye two struck me	
P. Top sungnem	Ye all struck me	

Ninth.—Conjugation of transitives in po having a nasal (m. n. ng.) before it.

The verb Hom, to taste.

INFINITIVE MOOD.

Aff. Hommung, to taste or to have tasted.§ Aoristic.

---

* For conjugation to pingko, see pp. 304 f.

† As already remarked at p. 293, this merged consonant must be restored before the conjugation can proceed.

‡ See prior verb at p. 292. Here we have for Váyu active and passive to'vi nognom and topta nognom = Khas kutnya hon and kutyako hon and dahma kha, dáya'hma kha, of Newári.

§ Also used quite like an adjective hommung ti, drinking or palatable water, water fit for tasting or being tasted.

Neg. Máng hommung, not to taste or to have tasted.

Gerunds.

Hom he	Present.	Tasting	With main verb in present or future.
Hom nung			With main verb in preterite.
Hom hom há	Past.	Having tasted.	
Hom sing he	Future or present.	When tasting.	
Hom khen	Past.	After tasting.	After having tasted.

Participles.

Honvi or homvi	Who tastes, did or will taste. Aoristic.
Homta or hompta	What is or has been tasted. Past and passive.
Homtáng or homptáng	What will be tasted, what is usually tasted, what fit to be tasted. Future passive.

Verbal Nouns.

Hom chyáng	Expresses the instrument as homchyáng li, the tasting tongue. It is also used substantively hom chyáng, the taster (organ, not man).

Hom lung expresses the locality, external to self.
Hom sing expresses the time of tasting.

The negative forms of all the above are made by prefixing the privitive particle máng.

Imperative Mood.

	Singular.	*Dual.*	*Plural.*
Aff.	Hompo	Homchhe	Homne
Neg.	Thá hom	Thá homchhe	Thá homne

Dual and Plural of Object.

* Aff.	Hompochhe	Do thou taste those two.
	Hompome	Do thou taste them all.

Negatives of the above.

* Neg.	Thá homchhik	Do not taste those two.
	Thá homne	Do not taste them all.

Indicative Mood.

Present Tense.

1. Hom sungmi	+ Hom chhokmi, excl.	+ Hom popmi, excl.
	+ Hom chhikmi, incl.	+ Hom pem, incl.

Dual and Plural of Object.

1. Hom sungchhem	I taste them two.

	3. + Hom pum	+ Hom pochhem	+ Hom pomem
*	3. + Hom pochhem	He tasted them two	
*	3. + Hom pomem	He tasted them all	

Negative mood by prefixed má.

Optative mood by conjugation of the verb dák suffixed to the root (hom) of the main verb, hom dák gnom, &c.

Interrogative mood by dropping final mi or m and substituting the interrogation form ki má, thus—

	Present.	*Preterite.*
1.	Hom sung ki má	Hom pung ki má
2.	+ Hom kimá	Hom po ki má
3.	+ Hom kimá	+ Hom po ki má

Subjunctive mood by substituting nam in the present and phen in the past for ki má; thus, hom sung nam, if I taste; hom pung phen, if I had tasted, &c.

Potential mood by conjugating the aoristic transitive wonto after the root hom.

PRECATIVE MOOD.

Present.	*Preterite.*	
1. Hom sung yu	Hom pung yu	thus merely substituting the precative particle for the interrogative
2. + Hom yu	Hom po yu	
3. + Hom yu	+ Hom po yu	

CONTINUATIVE MOOD.

Hom na hom nognom
Hom na hom nonum
Hom na hom nomi
} &c., as before

RECIPROCAL MOOD.

Hom na hom pánchungmi
Hom na hom pánchem
Hom na hom pánchem
} &c., as before

CAUSAL.

By conjugating the root hom with the causal verb pingko, as before.

PASSIVE.

IMPERATIVE MOOD.

Singular.	*Dual.*	*Plural.*
Aff. Hom sung	Homchhong	Hom pi kong
Neg. Thá hommo	Thá homchhok	Thá hom pok

Dual and Plural of Agent.

*	Aff. Hom sungchhe	Do ye two taste me
*	Aff. Hom sungne	Do ye all taste me
*	Neg. Thá hommochhe	Do ye two taste me not
*	Neg. Thá hommone	Do ye all taste me not

INDICATIVE MOOD.

Singular.	*Dual.*	*Plural.*
1. Hom mum	+ Hom chhokmi, excl.	+ Hom popmi, excl.
	+ Hom chhikmi, incl.	+ Hom pem, incl.

Dual and Plural of Agent.

	3. + Hommi	+ Hom chhikmi	+ Hommem
*	3. + Hom chhikmi	They two (and ye) taste him	
*	3. + Hom mem	They all taste him	
		Preterite.	
	1. Hom sungmi	+ Hom chhong mi, excl.	+ Hompi kongmi, excl.
		+ Hom chhing mi, incl.	+ Hompi kengmi, incl.
		Dual and Plural of Agent.	
*	1. Hom sungchhem	They two (or ye two) tasted me	
*	1. Hom sungmem	They all tasted me	
	2. Hommi	+ Homchhem	+ Homnem
*	2. Hommi	They two (or we two) tasted thee	
*	2. Hommi	They all (or we two) tasted thee	
	3. + Hompum	+ Hom pochhem	+ Hom pomem
*	3. + Hom pochem	They two tasted him	
*	3. + Hom pomem	They all tasted him	

Negative Mood.

Is formed, as in active voice, merely by prefixing the privative particle má.

Optative Mood.

Concurs with the same in the active voice, dák having an active and passive sense, and the neuter form dakgnom being also the passive form dakgnom, I desire or am desired; the latter sense transferred to root. With the synonymous verb yot', to like, the voices can be distinguished, yosto being the active transitive and yosung the passive; hence we have as optative active and passive.

Active Voice.		*Passive Voice.*	
1. Hom yonmi	*Present tense.*	1. Hom yotgnom	*Present tense.*
2. Hom yotmi	I like to taste.	2. Hom yonmi	I like to be
3. Hom yotmi		3. Hom yostum	tasted.
1. Hom yostungmi		1. Hom yossungmi	
2. Hom yostum	*Preterite.*	2. Hom yonmi	*Preterite.*
3. Hom yostum		3. Hom yostum	

Interrogative Mood.

Simply by dropping m or mi final and substituting ki má.

Subjunctive Mood.

Simply by dropping the mi or m and substituting nam for present and phen for past tense: hommonam, homsungphen, &c.

Potential Mood.

By conjugating the passive of wonto, as before, added to the root hom.

Precative Mood.

By dropping the final m or mi, and substituting yu: hommo yu, homsung yu, &c.

Causal Mood.

As before, by pingko added to the root.

Thus are conjugated námpo, to smell; thampo, to lose; *kh*umpo, to bury; hempo, to cause to sleep; hámpo, to spread; and all similar words. So also are conjugated all transitives in ko having a nasal before them (n or ng), as pingko, to send; chiṅko,

to spin and to fill; puṇko, to weave; hóṇko, to uncover; honko, to obey; chhuṇko, to cleanse; túṇko, to drink spirits and to cherish; suṇko, to dry at fire; lenko, to find—only that the terminations dependent on the transitive change with that sign, and as hompo makes hompopmi hompem, so pingko makes pingkokmi pingkem. See pingko conjugated at p. 304.

N.B.—The nasal is n or ng, *e.g.*, lenko veł lengko, to find and see.

SECOND FORM OF THE PASSIVE.

Hompta nognom
Hompta nonum
Hompta nomi
} &c., as before, throughout the auxiliary verb

SPECIAL FORMS.

I.—I and thou.

S.	Homnum	I (only) taste or will taste or did taste thee	Aoristic
D.	Hom nochem	I (only) taste or tasted you two	
P.	Hom nonem	I (only) taste or tasted you all	

II.—Thou and I.

S.γ	Hommum	Thou (or he) tastest or wilt taste me	Present and Future
D.γ	Hom mochhem	Ye two (or they two) taste, &c., or will taste me	
P.	Hom monem	Ye all taste or will taste me	

Preterite.

S.γ	Hom sungmi *	Thou (or he) tastedest me	Preterite
D.γ	Hom sungchhem	Ye two (or they two) tasted me

Negatives of all by máng prefixed.

IMPERATIVE MOOD.

	Singular.	*Dual.*	*Plural.*
Aff.	Táko	Táchhe	Táne
Neg.	Thá to	Thá tochhe	Thá tone

* The mark γ placed before some of these forms indicates that they are included in the more ordinary forms of conjugation. They are repeated here for illustration. The change of sense in dual and plural of preterite shows, in conjunction with the whole system of conjugation, how restive the language is under these trammels.

† There is not only no abrupt accent or tone, but there is an equally forcible pausing tone. Conj. viii. and xi. have the abrupt tone, not to add also conj. vii. The present conjugation only has the pausing tone. Both tones need close attention for sense sometimes as well as grammar, *e.g.*, to'vi and to'mi, with the abrupt tone, mean the striker and he strikes; with the pausing tone to'övi, to'öme, as here, they mean the placer and he places. Perhaps I ought to have so written the latter.

Dual and Plural of Object.

Aff.	Tákochhe	Put down them two
	Takome	Put down them all
* Neg.	Thá tochhik	Put not down them two
	Thá tome	Put not down them all

3.	+ Tákum	+ Tákochhem + Tákomem
* 3.	+ Tákochhem	He put down them two
* 3.	+ Tákomem	He put down them all

Negative mood by prefixed má.

Optative mood by dak conjugated after the tá root, as before given.

Interrogative mood by cutting off final mi or m and substituting the querying formula ki má.

Subjunctive mood by like truncation, and substitution of nam for present and phen for past tense.

Potential mood by conjugating wonto after the root tá.

Precative by the immutable particle yu substituted for final mi, m.

Causal by conjugating pingko added to root.

CONTINUATIVE MOOD.

1. Tá nátá nognom
2. Tá nátá nonum
3. Tá natá nomi

} and so on, conjugating the substantive verb nó, to be, after the model of phi, to come, and prefixing the iterated root with na interposed

RECIPROCAL MOOD.

Singular.	*Dual.*	*Plural.*
1. Tá natá pánchungmi	Tá natá pánachhokmi	Tá natá páchikokmi
	Tá natá pánachhikmi	Tá natá páchikem
2. Tá natá pánchem	Tá natá pánachhikmi	Tá natá páchinem
3. Tá natá pánchem	Tá natá pánachhikmi	Tá natá páchinem

And so on, for the preterite, after the model of imche and all reflex verbs in che.

* Also tovi nognom, as elsewhere explained.

This is formed by the reflex of the verb pá, to do, which is pánche added to the iterated root as before. The construction ad sensum, which is the chief rule of this tongue, restricts the reciprocal mood in use to the dual and plural.

PASSIVE VOICE.

Imperative Mood.

	3. +Takum	+Takochhem	+Takomem
*	3. +Tákochhem	They two (or ye) placed him	
*	3. +Takomem	They all placed him	

Negative Mood.

By prefixing má merely.

Optative Mood.

Tá dakgnom, &c., as in active voice.

Tá ping dakgnom (the last as a neuter) seems to be more correct, but is eschewed; though dakgnom, if allowed to be a passive, could hardly, one would suppose, create the passive sense in the main verb in either form of this mood.

Interrogative Mood.

Togno ki má	Tosung ki má	and so on, dropping the final m, mi, and substituting the interrogative ki má
To ki má	To ki má	
+To ki má	+Táko ki má	

Subjunctive Mood.

As in the interrogative, but substituting nam in present and phen in past tense for the interrogatory form.

Potential Mood.

Tá won gnom
Tá won mi
+Tá wontum

} &c., like the passive of háto aforegone. Here also the passive sense lost in the truncated root is transferred to the secondary verb. Taping wonchungmi, I am able to be put down, is also admissible

Causal Mood.

Tá ping chungmi	Tá ping gnom	&c., by the reflex or passive causal of pingko, conjugated like imche and hompo respectively
Tá ping chem	Tá ping mi	
Tá ping chem	Tá ping mï	
I am put down by my own will, &c.	I am set down by another's will, &c.	

Continuative Mood.

Tá natá pognom
Tá natá pomi
Tá natá pomi

} &c., the iterated root conjugated with the passive of the verb pá, to do, which agrees with tá, to place

Thus are conjugated jáko, to eat; páko, to make; tháko, to hear; náko, to kindle; chháko, to loosen; chhuko, to seize; doko, to catch; khiko, to hide; dúko, to dig; seko, to understand; reko and guko,* to lift up; khoko, to cook; boko, to dry; and all others having a nude root before the ko sign. But observe that táko, jáko, and páko change their á into ó, as in the aforegone paradigm, whereas the rest suffer no such alteration. All alike take a half nasal before the intransitive sign che. It has already been remarked that transitives *in* "ko" having a nasal before the sign, as pingko, to send, are conjugated like transitives in po with a similarly-placed nasal; but as pingko is the great former of causatives, I give it before closing the conjugations, observing by the way that the root ping, which is merely nasalised pi, seems to explain the Dravirian causative sign.

Second Form of the Passive.

1. Tota nognom
2. Tota nonum
3. Tota nomi

} &c., as before.

Special Forms.

I.—I to thee.

S.	Tonum	I (only) placed or will place thee	Aoristic

S.γ	Tosungmi	Thou (or he) placed me	Preterite
D.γ	Tosungchhem	Ye two (or they two) placed me	
P.	Tosungnem	Ye all placed me	

---

* Guko is error; for it is not gûko with the pausing tone proper to this conjugation, but gu'ko (recte gukko) with the abrupt tone; and therefore gu'ko belongs to the next conjugation. But add to this, kuko, to carry; hoko, to search; pleko, to share out; luko, to take off; piko, to sew; doko, to accept; khoko, to insert; veko, to suspend; poko, to spread; biko, to beg; theko, to push or shove.

1. Phongmi	Phokchhokmi, excl.	Phokkokmi, excl.
	Phokchhikmi, incl.	Phokkem, incl.

Dual and Plural of Object.

*	1. Phongchhem	I beget them two	
*	1. Phongmem	I beget them all	
	2. Phokmi	Phokchhikmi	Phoknem
*	2. Phokchhikmi	Thou begett'st them two	
*	2. Phokmem	Thou begett'st them all	
	3. Phokmi	Phokchhikmi	Phokmem
*	3. Phokchhikmi	He begets them two	
*	3. Phokmem	He begets them all	

* Thus are conjugated all verbs in "ko" preceded by a nasal, n, or ng, *e.g.*, all those cited at p. 211 f, or lenko, chenko, honko; and to these add phengko, to play; pungko, to weave; ingko, to buy, &c.

† Phok' is clearly the right rm. See note at p. 242.

Preterite.

1. Pho'kungmi	{ Phokchhongmi, excl.	Phokikongmi, excl.
	{ Phokchhingmi, incl.	Phokikengmi, incl.

Dual and Plural of Object.

*	1. Pho'kungchhem	I begot two	
*	1. Pho'kungmem	I begot all	
	2. Pho'kum	Phokchhem	Phongnem
*	2. Phokochem	Thou begott'st two	
*	2. Phokomem	Thou begott'st all	
	3. Pho'kum	Phokochhem	Phokomem
*	3. Phokochhem	He begot two	
*	3. Phokomem	He begot all	

Reciprocal continuative, &c., compound with phok and the verbs nó and pánche, as before.

PASSIVE VOICE.

No infinitive gerunds or participles save in the causal form, phokpingmung, phokpinghe, phokpingvi, &c.*

IMPERATIVE MOOD.

	Singular.	*Dual.*	*Plural.*
Aff.	Phoksung	Phokchhong	Pho'kikong.
Neg.	Thá phokgno	Thá phokchhok	Thá pho'kok

Dual and Plural of Object.

Aff.	{ Phoksungchhe	Do ye two beget me
	{ Phoksungne	Do ye all beget me
Neg.	{ Thá phoksungchhe	
	{ Thá phoksungne	

INDICATIVE MOOD.

Singular.
1. Phokgnom
2. Phokmi
3. Phokmi

Preterite.
1. Phoksungmi
2. Phongmi
3. Phongmi

} Dual and plural and agento-objective as in the last conjugation, only substituting phok for tó, of which the latter shows the tá root, internally modified; and the former, the iterate transitive sign, elsewhere suppressed, here brought forward, for phok-gnom and phongmi both depend on pho'-ko being really phok-ko.†

Thus are conjugated tá'ko, to decorticate; kho'ko, to crook; pu'ko, to awaken; chi'ko, to bite; ne'ko, to give rest; lu'ko, to choose; li'ko, to lay down or thrown down; cha'ko, to put upon, to make come up; ye'ko, to shear or clear the ground for cultivation; chho'ko, to sow; po'ko, to weigh or measure; chu'ko, to plane wood; lo'ko, to turn over; gu'ko, to raise forcibly; cho'ko, to offer; ruko, to plough, &c. Observe that in all these the latent iterate sign of the imperative, whose presence is only indicated by the abrupt tone (ta'ko), is preserved in the conjugation, whence from a common crude, or tá, to place and to decorticate, comes all the difference of tángmi, tomi, tomi and tángmi takmi, takmi in the indicative, whilst in the preterite there is only the difference of the abrupt accent, tákungmi, tákum, tákum, and ta'kungmi, ta'kum, ta'kum. The change of vowel is confined to the three verbs tako, jako, and pako. All other transitives in "ko" conjugated from the sheer root as Sé-ko, understand it, follow the paradigm of táko, less that change of vowel; as imperative Sé-ko, se-chhe, Se-ne, indicative, séngmi, sémi, sémi, &c. Compare with the transitives in 'ko, as above, those in 'po, as to'po, aforegone. Both follow the Dravirian rule of iteration, only disguised for the sake of euphony.

---

* This holds as to all the conjugations. But observe that the participles in tá and táng (2 in 3), though ranged under the active voice, are essentially passive.

† There can be no doubt than in all the verbs of this conjugation, as in all of the eighth, the dropped consonant must be restored, yet not so as to obliterate the tone which in these two conjugations is as decidedly of the abrupt kind as in conj. x. of the pausing kind; and, for example, táko (recte takko), here, is táko (tääko), apud conj. x.

Thirteenth.—Conjugation (of Irregulars).

Nó, *to be.*

PRESENT INDICATIVE SINGULAR.

1. Nógnom
2. Nónum
3. Nómi or Nóm

} The residue is quite regular (see 1st conjugation), as also in the above verb, and indeed the dual and plural of all verbs whatever are nearly immutable, as will have been seen

Remark.—Both the above have an abrupt tone or obscure t' before the gerund, participle, and verbal noun signs, as lat'he; not'he; lat'lat'ha, not'not'ha; lat'vi, not'vi; la'ta, no'ta, also in the infinitive, lat'mung, not'mung.

Fourteenth and *Fifteenth.*—Conjugations (of Irregulars), being those of the verb lá, to go, as used in combination with other verbs.

I. With transitives as top', to béat.

Indicative Present
Singular.
1. Top lángmi
2. Top lam
3. Top lam
Preterite.
1. Toplasungmi
2. Top lam
3. Toplachem

} Dual and plural, as in the uncombined verb lagnom, &c.

II. With neuters, as im, to sleep.

Indicative Present
Singular.
1. Im lagnom
2. Im lam
3. Im lam
Preterite.
1. Im la sungmi
2. Im lam
3. Im lam

} Dual and plural are in the separate verb

IMPERATIVE.

Topla — Imla

Remark.—In every conjunction of verbs the first loses the infinitive sign, and is used in the crude state, whence the peculiar transfer of passive expression to the subordinate verb, as before illustrated. But to this, háto, in the sense of let, is an exception,—thus, let me strike, is topmung hasung; and topmung hánum, I let thee strike.

The above fifteen conjugations, with their accessories (see bracketed portions), exhibit the whole scope of Váyu conjugation. But a reference to them will show that it has been necessary, whilst striving to accommodate our forms to the genius

* See first conjugation of neuters conjugated from the crude root.

of this language, to interpolate into the transitives certain forms expressive of both agent and object, and likewise to append to the passive certain other forms which have been necessarily set apart from all the conjugations; not to mention the perpetual coincidence of active and passive forms. It may now be of use to exhibit the whole matter of conjugation in another shape seemingly more accommodated to the genius of the language, and which, though exhibiting a deal of repetition, will be found convenient for comparisons when we proceed to the Kiránti language, a language still richer than the Váyu tongue in pronominal combinations with the verb, and wherein, consequently, many of the mere iterations of the following diagram will take distinct shapes; whence we may infer that decomposition has proceeded a good deal further in the Váyu language than in the Kiránti tongue.

Remark.—The whole of the above forms will, by and by, be seen to exist distinctly in the Báhing dialect of Kiránti, and nearly all in the Bontáwa and Kháling dialects. In Váyu the principle is the same, and many of the forms exist; wherefore we must conclude that the others have been lost; or shall we say that the process of development was stayed in mid course? The more anomalies, the more instruction; and it is necessary to put so new and peculiar a matter in several lights in order to judge of it truly. So that, instead of apologising for the above almost interminable details, I shall proceed to subjoin a comparison of Váyu and Quichua, the latter from Markham, ut supra, cit.

Quichua.	*Váyu.*
I. I—thee.	
S. I love thee, Munaiki	Chhánum
P. I love you, Munaikichik	{ Chhánochhem, D. { Chhánonem, P.
S. I loved thee, Munarkaiki	Chhánum
P. I loved you, Munarkikichik	{ Chhánochhem, D. { Chhánonem, P.
II. He—thee.	
S. He loves thee, Munásunki	Chhanmi.
P. He loves you, Munasunkichik	{ Chhánchhikmi, D. { Chhánem, P.
S. He loved thee, Munasukanki	Chhanmi
P. He loved you, Munasukankichik	{ Chhánchhem, D. { Chhánem, P.
III. Thou—me.	
S. Thou lovest me, Munahuanki	Chhángnom.
P. Thou lovest us, Munahuankichik	{ Chhánchhokmi, D. { Chhánkokmi, P.
S. Thou lovedst me, Munahuarkanki	Chhánsungmi.
P. Thou lovedst us, Munahuarkankichik	{ Chhánchhongmi, D. { Chhánkikongmi, P.
IV. He—me.	
S. He loves me, Munahuanmi	Chhangnom.
P. He loves us, Munahuanchik	{ Chhánchhokmi, excl., D. { Chhánchhikmi, incl., D. { Chhánkokmi, excl., P. { Chhánkem, incl., P.
S. He loved me, Munahuarka	Chhánsungmi.
P. He loved us, { Munahuarkanchik / Munahuarkaiku	{ Chhánchhongmi, excl., D. { Chhánchhingmi, incl., D. { Chhánkikongmi, excl., P. { Chhánkikengmi, incl., P.

Remark.—Chhan, to love, in Váyu=Muna, in Quichua, is not a good word for comparison because of its being of the aoristic class of transitives in "to." In a tensed verb the resemblance to Quichua would have been more apparent. On the other hand, I have given the Váyu dual as well as plural, because its dual formative or chhik is almost identical with the Quichua plural sign or chik, whilst the plural one differs, and nothing is more certain than that these signs are apt to mingle and the dual to fall out of use.

By referring to the above paradigm of the verb já, to eat, it will be seen that the Váyu has many other forms expressly representative of the agent and object, and therefore more significant than some of those here collated with the Quichua forms.

In Váyu the only forms which in the present state of the language refuse entirely to mix in the stream of conjugation are those which express the action passing from me to thee and no other. One cannot help imagining a system of conjugation with suffixed pronouns thus—

Ha, to give.		Tó, to strike.	
Singular.	*Plural.*	*Singular.*	*Plural.*
1. Hagnom	{ Hákem { Hágnem	1. To'mum	{ To'pem { To'mem
2. Hanum	Háuem	2. Topnum	Topnem
3. Hatum	{ Hámem { Hátem	3. To'pum	{ To'mem { To'pem

But the following explanations of the senses of the leading series of these forms which is real (the subordinate is wholly hypothetical) will show how utterly such a notion would mislead.

1. { Hágnom, gives to me thou or he any single person.
   { Hákem, gives to us any one in all numbers.
1. { To'mum, beats me thou or he any one in singular number.
   { To'pem, beats us any one in all numbers.
2. { Hánum, gives to thee I only. Hámi, for any other giver.
   { Háuem, gives to you all any save I. Hánonem, for me as the giver.
2. { Topnum, beats thee I only. To'mi, for any other beater or beaters.
   { Topnem, beat you all, any save I, in all numbers.
3. { Hátum, gives to him thou or he or any single person except me. Hátungmi, for me.
   { Hámem. No such word.
   { Hátomem, gives to them any person or persons except me. Hátungmen, for me.
3. { To'pum, { struck him any single person but me. Topungmi, for me.
   {   { strikes him, the present tense is to'mi.
   { To'mem, strikes them all any person whatever.

Háto, to give, being aoristic hátum, is equally present and preterite. But top, to strike, has for the present tomi, which moreover serves for all three persons alike in the singular number.

Thus it appears that num and nem alone offer the appearance of uniformly inflected personal suffixes, and that even in regard to these, the singular and plural *senses* are diametrically opposite.

But there are other complications resulting from the plurality of agents or of patients which account at once for the specialities of the above explanations and of those which follow. Thus :—

1. Hágnom, gives to me any single person.
2. Hágnochhem, give to me any two persons.
3. Hágnonem, give to me ye all only.
4. Hágnomem, give to me they all only.

In the preterite hásúng takes the place of hágnóm; and with the verb top', to beat, we have only the euphonic change of gnom to mum, the residue being alike for both verbs; thus we have—

Present.	*Preterite.*
1. To'mum	1. Topsungmi
2. To'mochhem	2. Topsungchhem
3. To'monem	3. Topsungnem
4. To'momem	4. Topsungmem

If to the above crowding of agents and patients round the action we add the fact that the distinction of activity and passivity in the action itself is almost lost at the very corner-stone of the whole structure of conjugation—because the sign of action, kat' hexoki-n, viz., its having an object, is precisely that which denotes at once the transitive verb and the passive voice, *e.g.*, há-to, give to him; há-tu-m, he is given and he gives—we shall at the same time perceive how difficult it is to make these languages conform to our notions of conjugation (see and compare Tickell and Philipps, voce Sontal), and shall also be prepared to hear that a system at once so complex and so incomplete has been very generally cast aside either wholly (Newári, Lepcha, Bodpa, Malayalim, Burmah, Malay); or in part (other Dravirian, Dhimáli, Namsangnaga, &c.); and in this or that particular mode, one group of tongues rejecting the dual (Dravirian cultivated); another, the sex signs (Himálayan complex);* a third, the whole system of conjunct pronouns (Himálayan simple† and those above cited); whilst the attempt to blend with the action agents as well as patients, and both in the dual and plural numbers, has been maintained only by Kiránti and some Oceanic tongues, the Váyu, Sontal, &c., being now restricted to a duality and plurality on one side only, viz., that of the agents or that of the objects. The Váyu can express (like the Sontal) several agents and one patient, or several

* The complex Himalayan tongues are Limbu, Kiránti, Háyu, Kuswár, Súnwar, Dhimáli, Bhrámu, Chepáng, Kusunda, &c.

† The simple or nonpronominalised are Newári, Thumi, Pahi, Múrmi, Gúrung, Mágár Khas (mixed), Lep'cha, Pálusen or Syár'pa (Serpa), Bodo, &c.

patients and one agent, but not a plurality of both. The Kiránti can express a plurality of both. But neither the one nor the other has effected the same sort and degree of amalgamation of its conjunct pronouns in the case of its nouns as well as verbs, as the Himálayan, Kuswár, and the Ugrofinnic tongues generally have done, which all alike have perfectly blended suffixes for both; whilst the Kiránti, with an equal fusion in both cases, prefers the method of prefix for the nouns;* and the Váyu, following the same Dravirian order of arrangement, has not reached the same completeness of development in *this* respect (therein further agreeing with Dravirian), though more in others. It has a perfectly separate set of possessives for combination (áng, úng, á vel ú); but to the noun has got blended inseparably the third of these (ang-upa, ung-upa, a-upa or wathim u-pa), and thus a euphonic combination of the whole with the nominal root has been prevented, as in Bodo, which, however, as well as Váyu, can and occasionally does use as perfectly fused † prefix forms as the Kiránti, and sometimes both the disjunct and conjunct prefixually, and Dhimáli likewise.‡ From the verb, Bodo, like Malayalim and several Nilgiri tongues, has dropped the pronoun; Dimáli, like Tamil, Uraon, and Male, has kept it; in Váyu, as in Sontal and Hó, the phenomena are complex. (See note at the end of the article, further on, on the Kiránti tribe. Double pronominalisation affines our Váyu and Kiránti to Hó and Sontal, but different positions of the pronouns differences them. The fact of having them and this different use of them—what worth? See Poole on Egyptian J.R.A.S., p. 313; also the analogy with Quichua noted by me.)

I refer to the head of pronoun for some more remarks on this subject. In the meanwhile, and in conclusion of the topic of Váyu conjugation, I beg to suggest attention to the following collation of actives and passives of the several types in the third persons of the present (or future) and preterite.

* Here the inclusive form of the pronoun (ungki) and of the reflex voice of the verb Isto, to denominate (ischikem), are used; literally, in our own tongue, we call ourselves. In the preceding sentence, if itkem be not error, it is the inclusive also, but of the passive voice: we are called, *i.e.*, all of us Váyus are called Háyu by the Khas. But isto, which is both neuter and transitive, carries to a maximum the peculiarities of the three voices of Váyu verbs.

TRANSLATION.‡

My name is Páchya. I am a Váyu. The Khas tribe call us Háyu, but our own name is Váyu. I am an old man. I don't know how old; above sixty. I am a cultivator of land assigned by the Rája to the soldiers of the Dhunkuta regiment. I have no land of my own. My son is in the service of Captain Gajráj Thápa. You saw him here often, and drew his portrait and measured him. He thought that very queer, and was a little alarmed. But the Captain reassured him, and he consented. I have been here four months to help you to learn our language. It is very difficult. You must judge of all. I can only answer your questions. I hope you will soon let me go home. Our people dwell in the basin of (or along the course of) the Kósi river from near the valley of Nepál proper to the Tamba Kósi. We are not Áwalias (people inured to malaria or áwal). The Áwalias dwell in the valley of the river, and are called

* A phrase of numeration. See Vocabulary.
† A phrase of measure. See Vocabulary. It is equal to two handfuls.
‡ Take notice that this sample of the Váyu language likewise reveals the location, status, &c., of the people. Therefore revert to it when you come to the article on the Váyu tribe.

Kuswar, Bótia, Dénwar, &c. We can't live there by reason of the malaria. Nor do we dwell on the hill summits like the Kúsúnda and Chépáng, who never cultivate, but live on wild herbs and fruits and never build houses. We have houses and cultivate the soil, growing maize and kódo and buckwheat, and rice, cotton, millets, barley, wheat, and madder. We are fixed cultivators, like the Néwárs, not migratory ones like the Lepchas, Limbus, and others. We occupy the central parts of the hill slopes, which we cut into terraces. Rice won't grow on the tops, nor any sort of grain. We go up as high as grain will grow. We use the plough or the spade, according to the nature of the site we occupy. We have no craftsmen, smiths, carpenters, or potters—of our own tribe. We buy utensils and ornaments from others. We build our own houses, and our women spin and weave the home-grown cotton of which they make our clothes. None of our race are soldiers, nor do we ever take service (menial). The Néwárs dye for us, if we need it; but the men wear plain clothes. Those of the women are sometimes dyed. Our villages are very small, usually fifteen to twenty houses scattered along the hill-sides. Our houses are built of rough timber, plastered and thatched with grass. Two rooms in a house—one for cooking and the other for sleeping. We have no general dormitory for all the grown girls or boys of the village. We marry at maturity, buying our wives. A wife costs fifteen or twenty rupees. If we have no money, we earn her by labour in her father's house. We bury our dead without any ceremonies. We do not tattoo our bodies. Our ears we bore occasionally. We have no priest but the exorcist, who is also our only physician. None of our tribe follow the bráhmans or lamas. We abide by our own creed and customs. We eat fowls, pigs, goats, sheep, buffaloes. Not oxen, bears, or monkeys, but honey, milk, eggs. We drink beer and spirits. Much of the former, as it is home-made; little of the latter, because we must buy it. Our law of inheritance gives equal shares to all the boys, and no share to the girls. Our head villager decides our disputes. We never appeal from him. Our tribe is a broken one, and is reduced to very inconsiderable numbers.

† See leg and arm. To the words for these the signs of flat things (blem) is added to make names for foot and hand.

‡ Kojachanima, a female glutton. So khyimchanima, a housewife. See householder: and so also of all formatives in cha, koja = belly, khyim = house.

§ These and many more such are participles of the instrument or object, or of fitness, formed from the infinitives, or, less the m, mè, suffix, themselves infinitives. They can all be used as substantives or as adjectives.

‖ Wá, I', A', are the pronominal prefixes of nouns and suffixes of verbs, a thoroughly Dravirian trait and a fundamental. Here is a sample of the suffixes ú the first person = ur, wa, or o.

† Syerte-di-m, mountain in of. See note ‖ at p. 321.

‡ Here, as often elsewhere, we have a noun used indifferently, with or without the pronominal definitive. Many instances have occurred in the foregone comparative vocabularies. Let a word imply relation of any sort, as of odour to an odorous body; and even if, by standing alone, it be liable to misconstruction, it must have the definitive pretty much, as in English the article is needed to separate nouns from verbal imperatives; *e.g.*, a cut from cut, a smell from smell.

§ In the first of these two forms of expression the two words are regarded as a compound; in the second we have the ordinary genitival style: man, his ordure; tiger, its dung.

‖ *E.g.*, Ip dikha, sleeping-place = bed-chamber. Kidikha, cooking-place = kitchen.

* Múryu or muryeu á chárnika, man his urine; songára á charnika, goat its urine.

† Jachome, literally what fit to be eaten or usually eaten. Participle of the object. See note at p. 327.

‡ Wa and mi are suffixes of gender. The formative suffix cha is equivalent to wa in words like lí-cha, a bow man; kún-cha, a thief, &c. The feminine of wa is mi; of cha is micha, as koja-cha, a glutton; koja micha, a female glutton; or it is nima, as kun-cha, a thief; kun-chanima, a female thief. Pau and pó are also masculine signs, whereof the former makes its feminine by adding nima; the latter by changing the po into mo, as dyal-pau, a villager; dyal-paunima, a female villager; ryamni-po, an adulterer; ryamni-mo, an adulteress.

The participial suffix ba, which also makes nouns of the agent, and gives qualitives a substantival character, as thyak-ba, a or the hammerer; neu-ba, a or the good one, is another masculine suffix which takes nima for its feminine.

But participial nouns in ba are often regarded as of all genders, and when used adjectively, as all can be used, they take no sign of gender, or number, or case. They precede the substantive, which they qualify in their crude form, as neuba wainsa, a good man; neuba wainsadau, good men; neuba wainsake, of a good man.

The inherent relative sense of the participles enables them to dispense with any formative, but if it be specially necessary to express gender, such words, when used as nouns, can take the wa and mi sex signs, and also the signs of number, always supposing that their use is substantival.

Dravidian participles are formed from the gerunds (fide Caldwell), and need a formative to give them the relative and participial sense. Such is not the case with Kiránti participles, though these when used substantively often take the m, me, formative, and always if the participles be of the impersonated kind. See Verbs.

Observe that the Vocabulary throughout is so constructed as to be a clue to grammar as well as to vocables.

§ Participial, like most of the following. See and compare the verbs neu, to be good; neu-gna, neu-ye, neu, I, thou, he, am good; neu-ba, who or what is good, all genders; dual, neubadausi; plural, neu-badau. Neu = it is good, is the root of the verb and noun. So Newari bhing, which has ji bhing, chha bhing, wo bhing, for the three persons, and bhing—hma-gu for major and minor of gender, and bhing hma, nihma, and bhing ping, for dual and plural. But note that Newari repeats the gender sign (hma) with both qualitive and numeral (bhing-hma, ni-hma) in the dual, while in the plural it omits it wholly, substituting for the sign of gender that of number, or ping = dáá in Báhing. What is said of Váyu qualitives holds generally true of Kiránti ones, viz., there are few proper or primitive ones. Most are participles, such as all those ending in ba, siba, na, and chome. The possessive suffix m, me, forms adjectives from substantives and nouns from verbal infinitives. So also the suffixes kem and dim make adjectives from substantives.

† Bíba is the transitive, bísiba the intransitive form. See Verbs.

‡ See p. 330 of Sequel, also the note and references at p. 321, *supra*.

§ Byakchopaba is literally who makes to die, and so of all similar words; but the form is doubtful, and in general the participle in bá, which is aoristic, is used in neuter verbs exclusively to express both senses of dying and dead, sickening and sick, the preterite participle being regarded as an appendage of transitives only.

¶ These two words are samples of adjectives proper. Such are very rare in this tongue, wherein the qualifying words are mostly participles, usable, too, substantively, like those formed by the affixes cha and wa. This is another Dravidian trait; and the rarity of proper adverbs and prepositions, and the use of gerunds in lieu of the one and of nouns in lieu of the other (see Adverbs and Prepositions), are two more such traits, to be added to those elsewhere set down.

---

* All these, and numberless others ending in ba, siba, na, or chome, are participial. See further on. The relative pronoun inheres, and the use is adjectival or substantival.

† Me, m. affix, is a formative of all three genders = hma, gu of Newári, save that these are major and minor of gender. Mé, like hma, gu, attaches to all qualitives used substantively superadded to the gender sign, as gná-wá, gwa-mi = old (man and woman), whence gnáwame, gnámime = the old ones, male and female. So swalo-cha-mi = mature, male and female, whence swalochámé, swalomime.

‡ Ke (or kem, see p. 321) is the general sign of relation when one substantive only is used. When two are expressed, the second takes the á prefix (his, her, its), unless the relation be local, and then dim (diem = in of) is used instead of the á; *e.g.*, band of man, muryu á gu; rice of bazaar, bazar dim shéri. (See Grammar.)

§ Bwangdikha = the place where is; dikha usable only with a verb; bwang from bwakesse in loco.

Numeral Adjuncts.

They are doubtfully ascribable to this tongue, or falling so fast out of use that what remains is a mere fragment. I shall illustrate by comparison with Newári, in which these generic signs are undoubtedly normal and in full use. Báhing, like Newári, has no division corresponding to the fully-developed gender, m. f. n. It has not even, as Newári has, a division correspondent to the logical gender, or beings and things, which is equivalent to the major and minor of gender in the plural of Dravirian nouns and verbs also.

English.	*Newári.*	*Báhing.*
Beings, Things	Hma, Gú	Li ?
Rationals	...	...
Brutes	...	...
Vegetalia, Plants	Má	A'pum
Timber trees	Sima	Sing
Soft trees or grasses	Má	A'púm
Logs	Ká	...
Weapons, Implements	Pú	Syal
Pairs	Jú	...
Flowers	Phó	Lí
Fruits	Gó	Bwom
String of animals	Tya. Jhó	Chyarchyar
Heap of things	Dón. Púcha	Khumna
Herd of animals	Bathánga	...
Days	Nhu	Kha

In the use of these signs first comes the numeral, then the sign, and then the thing or being specified, *e.g.*, Newári, Chha ma si ma, Báhing, Kwong sing ápúm = one (timber) tree.

Chha má singhali má, N.; Kwo ápúm, Séli ápúm, B., = one chestnut tree.

Swó nhu nhi, N.; Sam kha namti, B., = three days. Nigo santola si, N.; Ni bwom santola sichi, B., = one orange.

Chhapukhwón, N.; Kwosyal bétho, B., = one sword. Chhago singhali si, N.; Kwobwom seti sichi, B., = one chestnut fruit.

* Páto is the causative of all verbs, and is derived from the root pá, to do or make. It answers to the Háyu form, "do for another." In Báhing it is the causative, also bearing that sense. Do, or make, is pawo.

† These are = wonto and woncho of Háyu, the definite and indefinite of Hungarian; in English, can it, or be able for it, and be able simply. Chápo forms the potential of all verbs.

‡ Be in a certain place = sit. Sheer entity is expressed by ka. khe, gno, defectives.

§ Neuter dyum becomes normally transitive and causal thyum. Both take the ordinary causative, which with the latter makes a double causal thyumpato, cause to cause to become; or, at pleasure, even a treble one, thyumpapato. Sogikko becomes kikko, whence kingpato and kingpapato.

‖ Observe, once for all, that the three forms of the transitive (primitive and causal alike) refer to him (any one), to self and to me (the speaker). Thus sá-to, kill him or it; sá-so, kill thyself; sá-yi, kill me; that in verbs like to do, the sense is modified of necessity, but without essential change; and that the passive has no imperative of the second or third person. Hence the entry under the first, and hence, as will be seen in the Grammar, the existence in the language of certain special forms of the verb subsidiary to the so-called passive.

* Jáso gives jáse, it is (self) supported; and Jáso or jápáso must be used for "be supported," though there be a passive formed from játi = support me. All this results from the imperfect development of the passive voice, which has no imperative of the second person.

† Transitive and causal glúndo from neuter glúgno, as wondo from wogno. From the former we have normally the double causals glúndáto and wonpáto. See on to pp. 345 f.

‡ See notes aforegone on the expedients for eking out the lack of true adverbs. One is the use of the gerunds as instanced in "wade across" at p 337. Endless samples occur. Another is the use of verbs minutely specific, and which include the adverbial sense, as we say enter, to come in; but enter means also go in, as ascend does equally come up and go up. But kúwo and yúwo can only be used in the senses of come up, and come down, not go up or down.

§ Jwakko = arrive simply. The adjuncts tell whether by going (diwo), or by coming (piwo).

* Khyim á gwárè piwo, house its inside in come; Wogna, enter; Khyim á tolá piwo, house its outside to come; Glúgno, issue. In the former phrases Khyim may be omitted, but its forthcomingness would be implied by the pronominal definitive (á). The lack of proper adverbs and prepositions is made up in one of these two ways.

† These and all similars are imperatival gerunds. See Verbs. When the expression is imperative, the gerund sign is affixed to the imperative form of the verb; when it is indicative, to the indicative form. Come loiteringly is having loitered, come. This is one of the many affinities with the Dravidian tongues.

* Most dual of mowo, which apart = fight: in composition of several verbs = do, make.

† Lá expresses vicinity. Khyim lá, near, towards, at, the house; whence lá-m, of vicinity and lá-ng, from vicinity. So Di expresses inness, khyim di, in the house; whence di-m, of in and di-ng from in. M or me final is attributive. See adjectives and participles, *e.g.*, píba-me, I who come, I the comer, and kwágná me, the other one, and lala-m, red.

‡ Khyim nentha = the house is near and near the house, but the latter is better with genitive sign; so also of khyim pumdi. Khyim á pumdi, the house its side in, also prevents the equivoque and is the true form for near the house. Nentha having lost its sense as a noun cannot take the á. Nouns of place, however, take dim rather than á, as Khyim dim pumdi, literally, house in of side in. For possessive and genitive signs see p. 321 supra, and infra in Grammar.

§ More usual and correct perhaps are the inflective forms standing second. But wáke is also equal to my, wákedi, in me or mine, and wákeding, from me or from my.

6. Ike ding
7. Ike la
8. Ike lang
9. Íke taure
10. Ga nung
11. Ga manthi
12. Ga mi
13. Í pumdi

* See remark in sequel. Tau, gwá, and púm, as substantives or quasi such, naturally take the genitival pronoun; and perhaps also la and lang = taraf and tarafse of Urdu; but not so mi, di, and nung, which seem to be sheer case signs. La, meaning proximity, approach, has possessive lam and ablative lang; di, meaning inness, contact, has similarly dim and ding; ke, meaning relation, belongingness, kem and keng. Ke is probably borrowed. Suffix m or me is its probable equivalent. Compound prepositions are formed by la and di, like those of Urdu and Hindi—*e.g.*, Khyim dim = ghar men ka; khyim ding, ghar men se.

‡ Equal kon and kói. Hindi and Urdu.

§ Equal kyá and kúech.

‖ Equal jón and jó. The correlative is myam = tón and to. The relative pronoun is rarely used because of the relative character of the participles. Indeed its existence at all may be safely denied, and the correlative is nothing more than the remote demonstrative.

as many; metti = so many; dhé kono = many and much; dékho = a few, a little; gisko = whoever and whatever; kwángnáme = other, another; myem = the same (see *that*); nimpho = both; and, in a word, all primitive or personal pronouns. Possessive pronouns are formed from the genitives, except in the case of the three leading pronouns. I, thou, he or she or it, each of these has two distinct forms quite separate from the personals; thus go has wá = mei and meus, in English, of me and my; and wake = English mine. So also ga, the 2d pronoun, has í and íke; and harem, the 3d, has á and áke. The first of these two possessive or genitival forms are pronominal adjectives, or rather adjuncts of nouns and verbs (and adverbs also) by prefix and suffix respectively. The second are pronouns proper, like mine, thine, in English.* The former are indeclinable; the latter are declinable, like all other proper possessives, though with some confusion, originating in the imperfect development of the inflective element, its frequent coincidence with the genitive sign, and the variableness of that sign.

However, the case signs generally and their mode of annexation being uniform, out of this essentially one declension order is obtained, despite the disturbing causes adverted to. I give here, as a sample of the possessives:—

Dauboke = own

1. Dauboke
2. { Caret ?

9. Dauboke taure
10. Dauboke nung
11. Dauboke manthi
12. Dauboke mi
13. Dauboke pumdi or Daubo á pumdi

Daubo = áp; dauboke = apna. *Apnaka* can only be separately expressed by the cacophonous iteration of the guttural. Nor is this defect remedied by the use of the conjunct pronouns, wá, í, á; for wádwábo, myself, gives wádwáboke, of myself and my own; and ídwábo, thyself, gives ídwáboke, of thyself or thy own. See more on the genitive in the sequel.

* The formation of these from the my, thy series, by the addition of "ki" or "ke," is quite Turkic. Wa = my, wá-ke = mine. So Turki benim = my, benim-ki = mine. Only Báhing uses the conjunct form merely (quasi im, imki) of the pronoun, which in that tongue, moreover, is a prefix, in Turki an affix, of nouns. The existence of disjunct and conjunct forms of the pronouns, and the use of the latter as verbal formatives as well as to give the possessive sense to nouns, are traits of language very widely diffused, since they are found in the Egyptian and Semitic tongues. And it is queer that the vulgar or spoken Egyptian (Coptic) prefixes these verbal formatives, whereas the learned, or hieroglyphic, suffixes them.

† Compare uskaka in Hindi and Urdu.

‡ A', ási, and áni are the conjunct forms attaching to nominative which follows genitive, thus wainsa dau áni ming, or wainsa dauke áni ming = the wife of several men; literally, men (of) their wife or woman. The use of the same form in the next case proves gwa to be a substantive used as a preposition, like *bhitar* in Hindi, áni gware = their interior.

It results from the above that there is but one declension; that gender has no grammatical expression; that number, like case, is expressed by separate post-positions, number going first; that all nouns and pronouns take the signs of number, neuters as well as others; that some of the signs of case are still significant (gware, the interior; taure, the top; púm, the side); that *ke* is the general genitive sign, but rarely used save when the noun stands alone, as in reply to a question, thus, whose?—the man's, is suke, wainsake; that when two substantives come together the former is the genitive, and has properly no sign (no qualitive ever has), though the "ke" be sometimes superadded to the special denotator, which is á, the third pronoun (his, her, its), or dim, whose sense is in, of. Dim expresses a relation of locality or inness (what is contained); á, almost all other sorts of relation. Dim is used conjunctively and disjunctively, as, of where the tooth? gyelame khleu: of the mouth, sheödim. Both precede the second substantive or nominative—thus wainsa á ning = the man's name; grokso á syanda = the thing's sound; rú dim khán = vegetables of the garden; bazar dim shéri = bazaar rice, or rice of the bazaar; pu dim pwáku, water of the cup; so that this latter may be called the general way of expressing the relation of two substantives which are both named—the former the general way of expressing relation when the qualitive noun only is named, for genitives are all qualitives, *e.g.*, singke = wooden, ramke = bodily. Lastly, that pronouns and nouns are declined throughout and in all respects in the same way, there being no difference whatever between them. As to the genitive relation, it should be further noted that the first of two substantives is by position alone a genitive; that very close connection and dependence is expressed by á, *e.g.*, the calf of the cow, bing á támi; that "ke" can be used with á, as wainsake á ning, the man's his name; that where ke is formative—as singke = wooden, from sing, wood—its conjunctive use is indispensable, like that of the ba and na, the participial formatives; thus, syelke bétho, the iron blade;* neubá muryu, the or a good man (properly, the man who is good), from syel = iron (subs.), and neu, to be good. Observe, further, that the topical sign di both asks and answers, as ru dim khan, garden vegetables; and, of where? the garden's, gyélam (or gyélame), rúdim.

In this latter instance we may observe that, gyéla being where, the final m or me of gyélam, gyélame, has, in respect of adverbs, a genitival force, and so in di-m, of in—m, possessive, ng, fromness, formatives; ke also takes the formative m (see note at p. 353) and la also; and in qualitives we constantly find a similar termination (bubum = white, lalam = red, kwágname = other, &c.), so that the m final is shown to be generally possessive; and more especially as its iteration (bubu-

* Observe that the iron of the blade is bétho á syel or betho ke syel. But the point or haft of the blade is necessarily bétho á juju and betho á rising. See note ‡ at p. 347, with the places therein referred to.

mme = the white one, lala-mme = the red one, kwágnamme = the other one) expresses the disjunct form of the same relation. Thus, which one will you have? the red one or the green? agyeme blávi, lalamme ki gigimme, a sample wherein the possessive á is welded to the relative pronoun gyem. By turning to the participles it will be seen that all those which have not a sign of their own (ba or na) are made participles by the annexation of the m or me particle—juju-m, chho-me.* This is, in fact, the general attributive affix, and its suffixture transforms all qualitives (including adverbs) into substantives or words used substantivally, like the hma gu affix of Newari, and like also the Dravirian van, val, which seem to me to be the unquestionable prototypes of the Prakritic wan, wal, war (gaon-wár, sheto-wala, gári wán, marne wala, &c.) I subjoin a few comparative samples, drawn from Báhing and Newári, which will also show that nearly any word in these tongues can be used substantivally, and that all qualitives, in particular, can by the appropriate affix be made substantival, *e.g.*, singke, wooden; singkeme or singkem, the wooden one.

* At all events, the participles in chome would seem to be formed from the infinitives in cho, the general infinitival sign; *e.g.*, jácho, to eat; jachome, edible; pácho, to do; pachome, double; dakcho, to desire; dakchome, desirable. But see the various examples of words in m or me in the vocabulary. Infinitives are regarded as nouns substantive (*e.g.*, dakcho, desire), and such nouns take m, me, to make them qualitive, *e.g.*, juju, a point; juju-m pointed; chho, the body; chhome, bodily. Thus m, me, is formative and possessive, and it can be added to case signs wherever possessiveness is implied, but it is no sign itself any more than ke, *e.g.*, juju-m = singkem, why not singem or singme? agyeme? à-gyè-mè, gye, what? lalam? lala-m? lala, what?

Remark.—The above list affords, it will be seen, collateral information as to the formation of gender in qualitives used substantivally. It also shows that the formative suffix cha is apt to be equivalent for the suffix me, m; and as cha still leaves a substantival word (*e.g.*, khyim-cha = householder; lí-cha = bowman), the genitival sign ke is often introduced before final me, to express possessiveness, as, whose bow is that? the bowman's, suke lí, líchakeme. But lícha being bowman, líchame may be used for bowman's. Newári avoids all vagueness by its hma and gu signs, repeated toties quoties with the genitive sign ya, *e.g.*, Ji-hma, mine, m. and f.; Ji-gu, mine, n.; Ji hma ya hma, Ji hma ya gu, Ji hma ya hma ya, Ji hma ya gu ya, Ji gu ya hma ya, Ji gu ya gu ya, &c., express any number of variations in the possession of beings and things; and so also in all qualitives used substantively, thus: toyu hma ya hma, the white man's animal; toyu hma ya gu, the white man's thing; toyu hma ya gu ya, of the white man's thing, &c. Compare Báhing khyim-cha-me with Newári chhen-ya-hma, and it will be seen that cha = ya has a quasi-adjectival force, though khyimcha means householder. Such vagueness is normal.

3. Glwau	Glwau-tá	...	...	Glwau-pa-yi, pas.

Thus are conjugated rú-gno, to be filled (belly) or satisfied; lé-gno, to return; wo-gno, to enter; glú-gno, to issue; ming-gno, to be ripe; bro-gno, to be flavoursome.

III. Transitives in "ko."—Infinitive, Pok-cho, to make get up, or raise (not lift). Imperative, Pokko, raise him.

1. Pog-ú	Pók-tóng	1. Póng-yi ? (i)	Pók-tí	Pong-páto	ut supra
2. Pog-í	Pók-teu	2. Pong-ye (é) Pó-nyé	Pók-tó	Pong-páso	
3. Pog-á	Pók-ta	3. Pó-gá	Pók-tá	Pong-páyi	

Thus are conjugated tuk-ko, to lick; chuk-ko, to bind; rik-ko, to reap; kik-ko, to beget; hik-ko, to count; kúk-ko, to crooken; yok-ko, to share out; prwak-ko, to unknot; nok-ko, to rub; tok-ko, to make fall; hok-ko, to open; jik-ko, to break; pwak-ko vel pukko, to burst; ryak-ko, to write or colour; jak-ko, to know; khryak-ko, to enrage and to revile; rik-ko, to reap; kok-ko, to dig; ruk-ko, to eradicate; tyak-ko, to hinder; wok-ko, to flay; khlyak-ko, to plaster; phwak-ko, to separate; chyak-ko, to divide; pik-ko, to pour or put in; dwak-ko, to swallow.

Intransitives in "ko."—Infinitive, Bok-cho, to get up. Imperative, Bok-ko, get up.

1. Bóng-gna	Bók-ti	...	...	Bong-pa-to	ut supra
2. Bóng-gne, nye	Bók-te	...	...	Bong-pa-so	
3. Bóng	Bók-ta	...	...	Bong-pa-yi	

Thus are conjugated gruk-ko, to be quick; jwak-ko, to arrive; jik-ko, to be broken (n. and a.); buk-ko, to be burst; bwak-ko, to remain and to speak; gúk-ko, to be crooked; phok-ko, to be sour; gwak-ko, to walk; duk-ko, to move or shake; prok-ko, to jump or leap; byak-ko, to die; gik-ko, to be born; gnwak-ko, to weep; dwak-ko, to desire; dok-ko, to fall from aloft (being only).

IV. Transitives in "ro."—Infinitive, Phyér-cho, to sew. Imperative, Phér-ro, sew it.

1. Phyér-ú	Phyér-tóng	1. Phyér-yí (i)	Phyér-tí	Phyér-páto	ut supra
2. Phyér-í	Phyér-t-eú	2. Phyér-é	Phyér-té	Phyér-páso	
3. Phyér	Phyér-tá	3. Phyér	Phyér-tá	Phyér-páyi	

Thus are conjugated chwarro, to cut; kurro, to carry; tyarro, to suffer, endure; khwarro, to shave or scrape or scratch (violently).

Intransitives in "ro."—Infinitive, Byar-cho, to fly. Imperative, Byarro, fly.

1. Byar-gná	Byar-t-í	...	...	Byar-páto	ut supra
2. Byar-é	Byar-t-é	...	...	Byar-páso	
3. Byar	Byar-t-á	...	...	Byar-páyi	

Thus are conjugated bárro, to increase; chyárro, to shine, as sun, &c.

V. Transitives in "lo."—Infinitive, Jyul-cho, to place. Imperative, Jyullo, place it.

1. Jyul-ú	Jyul-tóng	1. Jyul-yí (i)	Jyul-tí	Jyul-páto	ut supra
2. Jyul-í	Jyul-teú	2. Jyul-é	Jyul-té	Jyul-páso	
3. Jyul	Jyul-tá	3. Jyul	Jyul-tá	Jyul-páyi	

Thus are conjugated syallo, to snatch away; theullo, to cherish; yallo, to rub; limo challo, to tell lies.

Intransitives in "lo."—Infinitive, Bál-cho, to be tired. Imperative, Bállo, be tired.

Indicative active, sing. number.		*Indicative passive, sing. number.*			*Causal*
Present.	*Preterite.*	*Present.*	*Preterite.*		*imperative.*
1. Bál-gná	Bál-tí	...	...	Bál-páto	ut supra
2. Bál-é	Bál-té	...	...	Bál-páso	
3. Bál	Bál-tá	...	...	Bál-páyi	

Thus are conjugated hyállo, to be heavy, &c.

VI. Transitives in "po."—Infinitive, Teup-cho, to beat. Imperative, Teuppo, beat him.

1. Teub-ú	Teup-tóng	1. Teum-yí (i)	Teup-tí	Teum-páto	ut supra
2. Teub-í	Teup-teú	2. Teum-é	Teup-té	Teum-páso	
3. Teub-á	Teup-tá	3. Teub-á	Teup-tá	Teum-páyi	

Thus are conjugated gup-po, to lift (a light thing); bippo, to suck; syappo, to wash and sharpen; khuppo, to collect; jyappo, to buy; thappo, to weigh; chappo, to can it, to be able for any work; nippo, to express; appo, to shoot.

Intransitives in "po."—Infinitive, Rap-cho, to stand. Imperative, Rappo, stand up.

1. Ram-gná	Rap-tí	...	...	Ram-páto	ut supra
2. Ram-é	Rap-té	...	...	Ram-páso	
3. Ram	Rap-tá	...	...	Ram-páyi	

Thus are conjugated ippo, to sleep; ryippo, to be ended or to end, n.; dhappo, to shine as sun; deuppo, to be combust; jippo, to be rotten, &c.

VII. Transitives in "mo."—Infinitive, Lam-cho, to search. Imperative, Lammo, search for it.

1. Lam-ú	Lam-tóng	1. Lam-yí (i)	Lam-tí	Lam-páto	ut supra
2. Lam-í	Lam-teú	2. Lam-é	Lam-té	Lam-páso	
3. Lam	Lam-tá	3. Lam	Lam-tá	Lam-páyi	

Thus are conjugated nam-mo, to smell; theum-mo, to finish or cause to become; khleummo, to transplant; phemmo, to take in one's arms; sheummo, to cover; thimmo, to bury; hammo, to spread. This conjugation agrees with IV. and V. (see remark at VIII.)

Intransitives in "mo."—Infinitive, Dyum-cho, to become. Imperative, Dyummo, become.

1. Dyum-gná	Dyum-tí	...	...	Dyum-páto	ut supra
2. Dyum-é	Dyum-té	...	...	Dyum-páso	
3. Dyum	Dyum-tá	...	...	Dyum-páyi	

Thus are conjugated rimmo, to be handsome; dyammo, to be full; hammo, to be light (levis); khummo, to stoop; ryammo, to be emaciated or thin.

VIII. Transitives in "no."—Infinitive, Pun-cho, to beg. Imperative, Pun-no, beg it.

1. Pun-ú	Pun-tóng	1. Pun-yí (i)	Pun-tí	Pun-páto	ut supra
2. Pun-í	Pun-teú	2. Pun-é	Pun-té	Pun-páso	
3. Pun	Pun-tá	3. Pun	Pun-tá	Pun-páyi	

Thus are conjugated ninno, to hear; plenno, to release or set at liberty; salepanno, to spin, &c.

N.B.—This agrees with the last. Hence IV., V., VII., VIII. are one, and it seems likely that the common imperative sign should be "o," however near that be to "wo" or the sign of the very different first conjugation. The four specified agree, moreover, in not being subject to any euphonic changes in conjugation. They might be unitised as transitives in a liquid or nasal.

Intransitives in "no."—Infinitive, Wan-cho, to run. Imperative, Wan-no, run.

Indicative active, sing. number.		*Indicative passive, sing. number.*		*Causal*
Present.	*Preterite.*	*Present.*	*Preterite.*	*imperative.*
1. Wan-gná	Wan-ti	...	...	Wan-pato } ut
2. Wan-é	Wan-te	...	...	Wan-paso } supra
3. Wan	Wan-ta	...	...	Wan-payi }

Thus are conjugated Blenno, to live, &c.

IX. Transitives in "to."—Infinitive, brécho, to summon. Imperative, Bré-to, summon him.

1. Brét-ú	Bréttóng	1. Brét-í	Brétti	Bré-páto }	ut
2. Brét-í	Brétteú	2. Brét-é	Brétté	Bré-páso }	supra
3. Brét-á	Bréttá	3. Brét-á	Bréttá	Bré-páyi }	

So are conjugated río, to laugh at; dáto, to catch; níto, to set down; khleuto, to conceal; neuto, to make good; mú-to, to blow (breath); khúto, to touch; grúk-to, to quicken; bí-to, to obey; rok-to, to lift; dwak-to, to approve; khryapto, to kindle; rik-to, to contain; gap-to, to add to; duk-to, to shake it or cause to shake; grepto, to throw; dapto, to taste; nyapto, to shove; mimto, to remember; bláto, to dry at fire; jíto, to wet; chamto, to amuse; teuto, to know; yokto, to remove; le-to, to take back; syanto, to recognise; hanto, to cheat; játo, to stop, detain; khlamto, to spoil; lwakto, to put upon; bapto, to scratch for ease; plepto, to fold; timto, to squeeze; lipto, to turn over. *N.B.*—Those which have a consonant before the sign, as rok-to, dap-to, dwak-to, cham-to, han-to, and khlam-to, &c., do not double the "t" in the preterite of either voice; and consequently in the passive there is no mark of the distinction of time, *e.g.*, dapti, is I am tasted and I was tasted; * and again, daptu is I taste, daptong, I tasted, but dapta is he tastes or he tasted—the last, however, is a general trait.

X. Transitives in "to" which change the "t" into "d."—Infinitive, Sá-cho, to kill. Imperative, Sá-to, kill him.

1. Sád-ú	Sátong	1. Sáyí	Sátí	Sá-páto }	ut
2. Sád-í	Sáteu	2. Sáné	Sáté	Sá-páso }	supra
3. Sád-á	Sáta	3. Sádá	Sátá	Sá-páyi }	

Thus are conjugated wá-to, abandon or leave; tá-to, to kick; yéto, to split: úto, to fell; lá-to, to take away; páto, to do for another; krá-to, to bite; kléö-to, to undress; móto, to tell; chíto, to tear; píto, to bring; kú-to, to bring up; limléto, to feel; yú-to, to bring down; já-to, to make steady or firm; phú-to, to sow; náto and préto, to gather; phá-to, to exchange; khrí-to, to grind; hó-to, to pierce; hé-to, to distil.

Intransitives in "to."—Infinitive, Gní-cho, to be afraid. Imperative, Gní-to, be afraid.

1. Gní-gná	Gní-tí	...	...	Gní-páto }	ut
2. Gní-né	Gní-té	...	...	Gní-páso }	supra †
3. Gní	Gní-tá	...	...	Gní-páyi }	

So are conjugated jí-to, to be torn; khá-to, to be in pain; ú-to, to fall (on ground); sheö-to, to lose; léto, to return; jyukokáto, to flee; héto, to be sharp; bré-to, to vociferate.

XI. Neuters in "to."—Infinitive, Bo-cho, to flower. Imperative, Bo-to, flower.

1. Bót-u	Bótti	...	...	Bó-pato }	ut
2. Bót-i	Bótte	...	...	Bó-paso }	supra
3. Bót-a	Botta	...	...	Bó-payi }	

* In such cases the sense is determined by the use of the separate prefixed pronouns in the instrumental and objective respectively. Difference of time by an adverb.

† U'to and sheöto, like jikko elsewhere, are both neuter and transitive. See them under the respective heads. Khíwo, to tremble, is neuter; to quarrel is transitive. Bré-to, to cry out, is neuter; bré-to, to summon, is active.

Thus are conjugated khíto, to blow as wind; síto, to fruit; wamto, to sink or set as sun. But the last gives, owing to the consonant before the sign, wamtu, wamti, wamta; wamti, wamte, wamta; infinitive, wam-cho (see kwádo and sódo). Sí-to is often conjugated sidu, sidi, sida; siti, site, sita.

XII. Transitives in "do."—Infinitive, Gram-cho, to hate. Imperative, Gram-do, hate him.

Indicative active, sing. number.		*Indicative passive, sing. number.*			*Causal imperative.*
Present.	*Preterite.*	*Present.*	*Preterite.*		
1. Gramdú	Gramtong	1. Gramdí	Gramtí	Gram-páto	ut supra
2. Gramdí	Gramteu	2. Gramdé	Gramté	Gram-páso	
3. Gramdá	Gramta	3. Gramdá	Gramtá	Gram-páyi	

Thus are conjugated chyurdo, to wring; rimdo, to expect; cháyindo, or chyéndo, to teach; kwádo, to put on the fire; wando, to put or pour in; wárdo, to throw away; plendo, to forget; chamdo, to divert, amuse; glundo, to extract or take out; jyuldo, to place for another; tundo, to cause to drink; sódo, to tell for another; gremdo, to roast; heldo, to mix. But kwádo and sodó, having no consonant before the sign, double the t, as in IX., thus—

1. Só-du	Sóttong	1. Só-di	Sótti	Só-pato	ut supra
2. Só-di	Sótteu	2. Só-de	Sótte	Só-paso	
3. Só-da	Sótta	3. Só-da	Sótta	Só-payi	

N.B.—This, like sógno of Conjugation II., makes infinitive só-cho and causal só-pato, &c.; and in fact the various modifications of the verbs by voice, and in the peculiar manner here in question (so-gno, tell; so-do, tell for another), are sadly deficient in correspondent forms of the infinitive and participles. See on.

Intransitives in "do."—Infinitive, Myel-cho, to be sleepy. Imperative, Myel-do, be sleepy.

1. Myeldu	Myelti	...	...	Myel-pato	ut supra
2. Myeldi	Myelte	...	...	Myel-paso	
3. Myelda	Myelta	...	...	Myel-payi	

N.B.—This nearly agrees with XI., only that the root having a final consonant, the preterite "t" is not doubled. So are conjugated (I have found no other verbs of this conjugation).

XIII. Intransitives in "so."—Infinitive, Nis-cho, to sit. Imperative, Niso, sit down.

1. Nísi-gna	Ní-s-ti	...	...	Nísi-pato	ut supra
2. Ní-se	Ní-s-te	...	...	Nísi-paso	
3. Ní-se	Ní-s-ta	...	...	Nísi-payi	

This conjugation interposes its reflex sign, or "s," between the root and the ordinary intransitive conjugational forms. Nearly all transitives can be conjugated in this form as a middle voice. But it has also many primitives, as will be seen by the instances given. So also are conjugated wáso, cacare; chárso, mingere; píso, crepitum facere; náso, to take rest; chyénso or chayinso, to learn; khleuso, to lie hid; syínso or shayínso, to wake; sáso, to kill one's self; teumso, to beat one's self; bamso, to scratch one's self; ríso, to laugh; gléso, to lie down; chíso, to bathe; phíso, to dress; chamso, to play; prénso, to begin.

3. Jáp-t-eu-mi	Já-ta-si-mi	Ján-tá-ni-mi

N.B.—The intercalated p and n are devious.

---

* See note ‖ at p. 283. The peculiarities in question hold as to both tongues, and are even more developed in Báhing than in Váyu.

† The form of the conjugation in the remaining persons of the indicative mood being the same as in the first person (and also in the imperative), it is needless to load the paper with repetitions of the names of the numbers, agentive and objective, or with the English equivalents.

‡ Observe that the separation of the syllables is merely to facilitate the student's comprehension, and that I shall do so no further, for the genius of the language is averse to any such treatment of its finely-blended elements.

Third Person.

1. Jáp-t-a	Já-ta-se	Jám-ta-me
2. Jáp-t-asi	Já-tá-se-si	Jám-ta-me-si

Infinitive Mood.

Jascho, to eat, or to have eaten one's self, aoristic.

Participles.

1. Participle of the agent, impersonal.

Jásiba, the self-eater, one who eats, or will eat or ate himself, aoristic.

2. Participle of the object and instrument, present and future time, impersonal form.

Jaschome, his own that any one eats or will eat, self-eatable, what is self-eaten or wherewith to eat self.

---

* Here, as before, the gerundial impersonated forms are constructed by merely adding the past gerund sign or "ko" to the several forms of the tenses; and as in the indicative mood there are thirty-three personal forms proper to either time (present or future and preterite), so there are sixty-six forms of the gerund of past time, and in like manner are there sixty-six of the gerund of the present time, besides two impersonal forms—in all, 134. Of the participles there are sixty-six personated and three impersonate forms of the latter, making in all sixty-nine! This is a more than Manchuric luxuriance of participial and gerundial growth. I have now gone through the most essential and characteristic forms of the verb, and shall reserve the less essential, or the several other so-called moods, &c., for the sequel, proceeding first to the reflex or middle voice, and then to the passive, upon the present model. The gerunds are purely verbal, with no touch of the noun, and they are essentially continuative, serving in lieu of the conjunction "and."

† There are a great many primitives or neuters in "so," besides the derivatives or reflex forms of the transitives, which I call their middle voice. All transitives make their middle voice by changing their appropriate sign into "so." This form is perfectly uniform for all primitives and derivatives. The French amuser and s'amuser, = cham-cho and cham-s-cho, give a good idea of it.

‡ There are of course no objective forms of an intransitive verb, and all verbs in "so," whether primitively neuter or derived, as here, from transitives, are so regarded. See and compare the transitive forms in the active voice aforegone.

3. Same participle of time past, impersonal.

Jasina, his own (flesh) that any one ate, or what has been self-eaten by any one; and wherewith it has been self-eaten,* or his own (teeth) wherewith any one ate.

4. Impersonated equivalent of participle second in "chome."

PASSIVE VOICE OF THE SAME VERB.

(Basis, Jayi = eat me.)

IMPERATIVE MOOD.

Singular of Object.	*Dual of Object.*	*Plural of Object.*
1. Jáyi, eat me thou	Jásiki, eat us two thou	Jáki, eat us all thou

* The participles in cho-me and in na are scarcely usable in derivative verbs in "so" like jaso, but more freely in primitives of the same formation, such as wáso = caco, *e.g.*, was-chome khli, voidable ordure; and wásina khli = voided ordure, that is, the ordure which will be and has been voided. This shows the passive bent of these participles, and the affinity of neuter verbs to passives. See Classification of Verbs.

Dual of Agent.	*Dual of Agent.*	*Dual of Agent.*
2. Jáyisi, eat me ye two	Jasikisi, eat us two ye two	Jákisi, eat us all ye two
Plural of Agent.	*Plural of Agent.*	*Plural of Agent.*

INDICATIVE MOOD.

Present and Future Tense.

First Person.

Singular of Object.	*Dual of Object.*	*Plural of Object.*
1. Jáyí, eats me he = I am eaten by him	Jáso, incl. Jásiki, excl. We two are eaten by him	Jáso, incl. Jáki, excl. We are all eaten by him

3. Jayimi, I am eaten by them all	Jasomi, incl. Jasikimi, excl. We two are eaten by them all	Jasomi, incl. Jakimi, excl. We all are eaten by them all

N.B.—The agent is always of the third person, he, she, or it; if it be second person the conjugation is another.

	Second Person.	
1. Jaye	Jasi	Jani
2. Jayesi	Jasisi	Janisi
3. Jayemi	Jasimi	Janimi
	Third Person.	
1. Jawa	Jawasi	Jawami
2. Jase	Jasesi	Jasemi
3. Jame	Jamesi	Jamemi
	Preterite Tense.	
	First Person.	
1. Jati	Jataso, incl. Jatasiki, excl.	Jataso, incl. Jáktaki, excl.
2. Jatisi	Jatasosi, incl. Jatasikisi, excl.	Jatasosi Jáktakisi
3. Jatimi	Jatasomi, incl. Jatasikimi, excl.	Jatasomi Jaktakimi
	Second Person.	
1. Jate	Jatasi	Jantani
2. Jatesi	Jatasisi	Jantanisi
3. Jatemi	Jatasimi	Jantanimi

* Observe that of the active voice of the transitive the object is him or her or it; of the middle voice the object is self, and of the passive the object is me; but that the order of arrangement of agent and object is reversed in the passive as compared with the active voice, and so also in the indicative mood. This is done in conformity to the genius of this language, which requires the attention to be primarily fixed on the agent in one voice, on the object in the other. It will be seen in the sequel that there are further special forms of the verb to denote the action which passes from me to thee, and from thee to me. These are necessary complements of the passive voice in a language, which makes the mention of agents and patients inseparable from that of the action. Compare note ‖, p. 283.

Third Person.

1. Japta	Japtasi	Japtami
2. Jatase	Jatasesi	Jatasemi
3. Jamtame	Jamtamesi	Jamtamemi

INFINITIVE MOOD.

There is none properly so called.

The sense is conveyed by placing the separate pronoun in the objective case before the verb in the active voice; gó jácho = to eat me = to be eaten.

PARTICIPLES.

1. Participle of the agent in "ba" is of course wanting.

2. Participle of the object in "chome" is rather passive than active, though used in both voices; as we say in English, what (or whom) any one eats or is wont to eat, or what is wont to be eaten by any one.

3. Participle in "na" is yet more purely passive; ja-na, what has been eaten. But it is used with more than English license, as though it belonged to the active voice, what any one hath eaten.

4. Personated equivalent of the second of the above. It is formed by adding the formative suffix "me" to the several tense forms of the indicative present and future of this voice, *e.g.*

Singular of Agent.	*Dual of Agent.*	*Plural of Agent.*
1. Jayime	{ Jasome, incl. { Jasikime, excl.	Jasome, incl. Jakime, excl.

and so on through the whole of the thirty-three forms above given in the indicative.

5. Personated equivalent of the third of the above participles, or that in "na." It is formed, as above, by adding the formative "me" to the several forms of the preterite indicative of this voice, *e.g.*

1. Jatime	{ Jatasome, incl. { Jatasikime, excl.	Jatasome, incl. Jatakime, excl.

and so on through all the thirty-three forms of the three persons of the preterite passive. Jayime means I who am the eaten of him, and jatime, I who was the eaten of him; and so on of all the rest.

N.B.—The impersonal forms in this, and of the active and middle voices, are declinable like nouns. The personated in "me," which take so much of the verb character, are indeclinable. Both are thoroughly and intrinsically relative in sense.

GERUNDS.

Gerund of future and present time impersonal. There is none.

1. The same gerund personated with the main verb in same time.

It is formed by the addition of the appropriate formative, or "na," to the several forms of the present and future indicative of this voice, *e.g.*,

Singular.	*Dual.*	*Plural.*
1. Jayina	{ Jasona, incl. { Jasikina, excl.	Jasona, incl. Jakina, excl.

and so on through all the thirty-three forms of the three persons of the indicative.

2. The same gerund personated with the main verb in the preterite.

It is formed by suffixing the "na" to the preterite indicative forms, *e.g.*

1. Jatina	{ Jatasona, incl. { Jatasikina, excl.	Jatasona, incl. Jatakina, excl.

Samples of the sense—Being eaten I shall cry out, jayina bregna; being eaten I cried out, jatina breti.*

Gerund of past time, impersonal. There is none.

*Observe that the root bre, to cry out, is here conjugated as an intransitive. Elsewhere I have given the same root conjugated as a transitive in the sense of to summon. The infinitive and imperative (bre-cho, bre-to) are identical. This double indicative conjugation from the same root of words having nearly identical senses is very common, as uto, to fall and to fell, jikko, to be broken and to break, &c. Breto, the intransitive, is conjugated like guito, to be afraid, the type of regular intransitives in "to."

1. Same gerund personated with main verb in present or future.

It is formed by adding the formative "ko" to the several forms (thirty-three) of the indicative present and future, *e.g.*,

Singular.	*Dual.*	*Plural.*
1. Jayiko	{ Jasoka, incl. { Jasikiko, excl.	Jasoko, incl. Jakiko, excl.

2. Same gerund with the main verb in the preterite.

It is formed, as above, by adding "ko" to the several forms of the indicative preterite, *e.g.*,

1. Jatiko	{ Jatasoko, incl. { Jatasikiko, excl.	Jatasoko, incl. Jatakiko, excl.

and so on through all the thirty-three forms of the indicative preterite of this voice. The senses respectively of jayiko and jatiko are, having been eaten I shall be, and, having been eaten, I was or have been (forgotten); and so of the rest.

PARADIGM.

Of certain special forms of conjugation supplementary of the passive, and denoting, first, the action that passes between me as the agent and thee as the patient; second, that in which thou art the agent and I the patient. The first of these forms is very distinct, but is confined to the indicative (and subjunctive) mood. It has no imperative or infinitive. The second runs much into the ordinary passive, and has an imperative. See on.

First Form, I—Thee.

(Verb Ja, to eat, as before.)

Indicative Mood.

Present and Future Tense.

*Singular of Agent.**	*Dual of Agent.*	*Plural of Agent.*
1. Jana, I eat thee, or thou art eaten by me	Jayesi, we two eat thee	Jayemi, we all eat thee
Dual of Object.	*Dual of Object.*	*Dual of Object.*
2. Janasi, I eat you two	Jasisi, we two eat you two	Jasimi, we all eat you two
Plural of Object.	*Plural of Object.*	*Plural of Object.*
3. Janani, I eat you all	Janisi, we two eat you all	Janimi, we all eat you all
	Preterite Tense.	
1. Jantana, I ate thee, or thou wast eaten by me	Jatesi, we two ate thee	Jatemi, we all ate thee
2. Jantanisi, I ate you two	Jatasisi, we two ate you two	Jatasimi, we all ate you two
3. Jantanani, I ate you all	Jantanisi, we two ate you all	Jantanimi, we all ate you all

Participles.

There are none of the impersonal form.

Participle of the future personated. It is formed, as in the ordinary conjugation, by adding the appropriate particle of "me" to the forms of the indicative, *e.g.*

Singular.	*Dual.*	*Plural.*
Janame	Jayesime	Jayemime †

and so on through all the nine forms above given in the indicative present.

Participle of the past personated. It is formed from the preterite by adding the "me," *e.g.*,

---

* This form is rather allied to the passive than active, and may be called the supplement of the former, which is very incomplete, and alien to the genius of the tongue, being cramped at the threshold by taking the first person objective for its starting-point; thus, jayi=eat me. There is no Be thou eaten. And here jana and its participial janame look to the object chiefly, thou art eaten by me and thou who art the eaten of me.

† The "y" is merely to keep the vowels apart.

Singular.	*Dual.*	*Plural.*
Jantaname	Jatesime	Jatemime

and so on through the above nine forms of the preterite.

The sense of janame is, thou who art the eaten of me; of jantaname, thou who wert the eaten of me; and so of all the rest.

GERUNDS.

There are none whatever not personated.

The personated forms are, as in the ordinary conjugation, four, two of the present and two of the past, and they are constructed, as before, by adding respectively "na" and "ko" to the tense forms above; *e.g.*,

Gerund of the future and present with the main verb in same time.

Singular.	*Dual.*	*Plural.*
Janana	Jayesina	Jayemina

and so on through all the nine forms of the tense.

Same gerund with the main verb in the preterite.

Jantanana	Jatesina	Jatemina

and so on through all the nine forms above.

Gerund of the preterite with main verb in the past time.

Jantanako *	Jatesiko	Jatemiko

and so on through the nine tense forms.

SECOND SPECIAL FORM, THOU—ME.

IMPERATIVE MOOD.

Singular of Agent.	*Dual of Agent.*	*Plural of Agent.*
1. Jayi,† eat me thou, or let me be eaten by thee.	Jayisi	Jayina
Dual of Object.	*Dual of Object.*	*Dual of Object.*
2. Jasiki	Jasikisi	Jasikini.
Plural of Object.	*Plural of Object.*	*Plural of Object.*
3. Jaki	Jakisi	Jakini

N. B.—This tallies with the ordinary passive, as will be seen by reading the vertical columns of the one with the horizontal of the other.

INDICATIVE MOOD.

Present and Future Tense.

1. Jayi, thou eatest me, or I am eaten by thee	Jayisi	Jayini
2. Jasiki	Jasikisi	Jasikini
3. Jaki	Jakisi	Jakini
Preterite.		
1. Jati	Jatasi	Jatini
2. Jatasiki	Jatasikisi	Jatasikini
3. Jaktaki	Jaktakisi	Jaktakini

N.B.—These agree respectively with the present and preterite of the passive, save, first, that there are here no inclusive forms; and, second, that the personal sign ni stands here in the place of the passive mi.

---

* Samples of the above gerunds. Eating thee I shall fill my belly, janana rugna; eating thee I filled my belly, jantana ruti; having eaten thee I will go, janako lagna; having eaten thee I slept, jantanako ipti; we all having eaten thee, were pleased, jatemiko gyerstako; we two, having eaten thee, will flee, jayesiko juksukasuku; we all eating thee, fled, jatemina jukkatako.

† This is the formula of the passive, because the passive only requires that the first person be the patient, allowing the second or third to be the agent, and hence the indicative of this form so nearly tallies with that of the passive, jayi, eat me he or thou, &c.

Infinitive Mood.

Wanting: the ordinary infinitive is used with the separate pronouns in the instrumental and objective cases, gami go jacho.

Participles.

There are none of the non-personated kind.

The personated are formed, as usual, by the "me" suffix added to the tense forms, *e.g.*

Singular.	*Dual.*	*Plural.*
Jayime	Jayisime	Jayinime

and so on through the nine tense forms.

Jatime	Jatisime	Jatinime

and so on through the nine tense forms above.

The senses of jayime and jatime are, I who am the eaten of thee, and I who was the eaten of thee. The sense would be equally expressed by thou who art my eater; but eater, jaba, is purely active, and cannot be admitted into an agento-objective verb.

Gerunds.

Unpersonated, there are none.

The personated of the present are formed, as before, by "na" suffixed to the several tense forms, and those of the past by "ko" similarly affixed; *e.g.*, jayina, jatina, and jayiko, jatiko, equivalent to thou eating me wilt do so and so, and did so and so; and thou having ate me wilt do, and did, so and so.

These peculiarities are in fact confined to the transitives in unchanging "to," but are partially shared by the changing transitives and by the neuters.—See Classification of Verbs, pp. 361–365. For paradigm of transitives in "to" which change t into d, see on to p. 390 ff.

Pignako, &c., with main verb in future.

Pitiko, &c., with main verb in past.

All intransitives not having "so" in the imperative are conjugated as above, except certain ones in "to," which I shall distinguish as neuters, and which are conjugated as follows :—

PARADIGM OF NEUTERS IN "TO."

Root Bó, to flower. Imperative, Bó-to.

2d Per. Bótte	Bóttasi	Bóttani
3d Per. Bótta	Bóttase	Bóttáme

INFINITIVE MOOD.

Bó-cho.

PARTICIPLE of the agent in "ba."

Bóba, what flowers, or will flower, or has flowered.

N.B.—The second and third participles in "chome" and "na" are wanting,‡ and so also their derivatives in "me."

---

* *e.g.*, Pignáme kholi, the feet which I come with ; pignáme lam, the road which I come by ; pitime kholi, the feet which I came with ; pitime lam, the road which I came by.

† *e.g.*, Pignana pagna = I will come and do it ; literally, I coming will do it.

‡ These participles can rarely be used with intransitive or neuter verbs, never with such of the latter as relate to the action of things. They imply an agent who produces that effect on a thing which these participles express relatively to future and past time respectively. Out of the vast number of intransitives enumerated elsewhere hardly a dozen make use of these participles. Some of these exceptions are bwakko, to speak, which gives bwangna ló = spoken words ; bokko, to get up, whence bongna blocho, = the bed whence any one has risen ; niso, to sit, whence nisina-khosingba, the chair on which any one has sat, &c.

GERUNDS.

1. Bótuna.	Bótina	;	Bótana, &c.
2. Bóttina	Bottena		Bóttana, &c.
3. Bótuko	Bótiko		Bótako, &c.
4. Bóttiko	Bótteko		Bóttako, &c.

What, as opposed to the above, called neuters (see conjugation XI.) for distinction's sake, I have elsewhere called intransitives in "to," as jíto, kháto, &c. (conjugation X.), are all regular and conjugated like the verb to come above given. In fact, all the so-called intransitives, whatever their sign, have one uniform conjugation, those in "so," merely interpolating the reflex sibilant, as may be seen by comparing the aforegone samples of both. But the neuters in "to," here ensampled by bóto, are quite unique, leaning to the model of unchanging transitives with the same sign, for which see breto aforegone.

By comparing the above samples of complete conjugation with the summary view of the same subject which precedes it,* it will be seen that there is at bottom but one conjugation, because all transitives and intransitives follow the one general model, with the material exception, however, of the singular indicative. Of that the various forms are therefore brought together in the classification of so-called conjugations; and it is only necessary to add, that beyond the singular indicative of transitive verbs there are no deviations from the one model of conjugating in the three voices. The whole force of conjugation is, it will be seen, thrown upon the actors who do and suffer. Of the action itself there is little comparative heed, only two moods and two times being developed, and the active and passive voices being perplexed. There are not in fact any inflexional or inherent verbal forms to express the various modifications of the action. Nevertheless these modifications, of course, have periphrastic means of expression; I shall call them moods, and now proceed to enumerate them.

SUBJUNCTIVE OR CONDITIONAL MOOD.

If, or should, I come.

Indicative Present.

Singular.	*Dual.*	*Plural.*
1st Per. Pígna khedda	Písa khedda, incl. Písuku khedda, excl.	Píya khedda, incl. Píka khedda, excl.
2d Per. Píye khedda	Písi khedda	Píni khedda
3d Per. Pí khedda	Pise khedda	Píme khedda

Preterite.

1st Per. Pígnáwa khedda	Písawa khedda, incl. Pisukuwa khedda, excl.	Píyawa khedda, incl. Píkawa khedda, excl.
2d Per. Píyéwa khedda	Písiwa khedda	Píniwa khedda
3d Per. Píwa khedda	Písewa khedda	Pímewa khedda

The negative is formed, as usual, by má prefixed.

Another negative, allied if not equivalent, is impersonal, and substitutes the particle theum for khedda, adding the separate pronouns personal in lieu of the pronominal suffixes of verbs.

Should I not come, &c.

Present Tense.

1st Per. Gó má pítheum	Gósi má pítheum, incl. Gósuku má pítheum, excl.	Góyí má pítheum Góku má pítheum
2d Per. Ga má pítheum	Gasi má pítheum	Gani má pítheum
3d Per. Harem ma pítheum	Harem dausi má pítheum	Harem dau má pítheum

The preterite of this is formed by adding the "wa" above gone to the correlative part of the sentence; as, had I not come, he would not have come, gó má pítheum, harem má píwa.

In the present or future it is gó ma pítheum, harem má pí=should I come not, he will not come. In both forms of the conditional, wá, added to the indicative, takes the place of the regular preterite piti, pite, pita.

* To wit, Classification of Verbs, pp. 361–365.

CONTINGENT MOOD.

I may (perhaps) go.

It is expressed by the future in the alternative way, *e.g.*, lágna má lágna, má teutu = I shall go, shall not go, I don't know = I may go, or perhaps I shall go, perhaps not (root, la, to go).

POTENTIAL MOOD.

It is formed by adding ne to the root of any main verb (*e.g.*, la, to go), and then subjoining the several conjugational forms of the subsidiary verb to can, which is a regular transitive in "po." This not having been given above, shall be fully set down here, though it differ not much, save euphonically, from the foregone samples of transitives, especially bréto.*

It is so in all transitives in po, of all which chappo is a perfect sample.

† There is no present tense. The present is regarded as an inappreciable time. An act is not such till it is performed; hence the past is the main tense. But an act can be contemplated as during in intention and preparation; a blow falling till it has actually descended—future tense.

Remark.—The precedent is given in full, first, because it affords a sample of transitives in "po;" second, because it demonstrates that these so-called moods are merely compound verbs, which (like the case signs) can be multiplied ad infinitum, but have little to do with grammar.

Duty, necessity; I must, or ought.

It is expressed by the impersonal use of the verb dyúm, to become, put after the main verb in the regular infinitive, with the separate objective pronoun preceding both.

And so on, conjugating the transitive gíwo, to give, in the passive voice, like the passive of jáwo, to eat, aforegone. Lácho gíyi = let me go, give me to go. But observe, that in order to say let *him* go, you must use the active voice, as below.

Singular.

Let me go, lácho gíyi
Let him go, lácho gíwo

Dual.

Let us two go, lácho gísiki
Let them two go, lácho gíwosi

Plural.

Let us all go, lácho gíki
Let them all go, lácho gíwomi

Remark.—If to these forms we add those of the middle voice, S. Lácho gíso, D. Lácho gísche, P. Lácho gísine, we have a good clue to the character of the three voices in this language, which are based upon the idea of me, the speaker, being the exponent of the passive; of self, the spoken to, being that of the middle; and of him, or her, or it, the spoken of, being that of the active voice. Gí-wo = give him: gí-so = give thyself: gí-yi = give me, are respectively the starting-points of the active, middle, and passive voices.

Interrogative Mood.

It resembles the indicative, lágná, I shall go, or shall I go?

Prohibitive and Negative Mood.

There is no separate form of the negative verb as in Dravidian tongues, nor even any prohibitive particle distinct from the negative.

Má prefixed expresses verbal negation and prohibition, and also nominal privation; *e.g.*, má jáwo, eat not; má jágna, I do not eat; má neuba, not good = bad.

Inceptive Mood.

It is formed by subjoining to the ordinary infinitive form (cho) of the main verb the subsidiary intransitive verb prénso, to begin, or the transitive páwo, to do, to make: *e.g.*, túcho páwo, begin to drink; túcho papta, he began to drink; jácho prénso, begin to eat; jácho prensigna, I begin to eat.

Finitive Mood.

It is formed as above, but substituting for páwo or prénso the transitive theummo (conficio), *e.g.*, jácho theummo, finish eating; jácho theumtong, I have done eating. Sometimes "ne"* replaces the infinitival "cho" of the main verb.

N.B.—The neuters ryipo (desino) and dyummo (fio), to be ended or to end, cannot be used in this way, and prénso, to be begun or to begin (self), is much rarer in such use than páwo. Ryipcho páwa is, it nears its end, literally it makes to an end, or to be ended.

Continuative Mood.

It is formed by adding sógno (sense doubtful) to the root of the main verb, and therewith conjugating the intransitive verb bwakko, to remain (see conj. III.), *e.g.*, continue eating, jásogno bwakko. *N.B.*—The definite present and past are also thus expressed.

Imperative.

Singular.	*Dual.*	*Plural.*
Jáso-gno bwakko, eat continuously or keep eating	Jáso-gno bwakse, incl.	Jáso-gno bwangne

* The infinitival sign varies, not always intelligibly. Where purpose is meant "tha" is the sign, as játha láti, I went to drink, *i.e.*, for the purpose of drinking. Where commencement and end are expressed, "ne" is more frequent than "cho," jáne prénsigna, jáne theumtu, I shall begin to eat, and I shall have done eating. So also where wish is expressed, jáne dwaktong, I wished to eat. But cho is the common form, and always used alone, as jácho má jácho ágyem neu, which is better to eat or not to eat.

4th, in ko, Jasogno bwaktiko, &c., ditto.

Remark.—The above is given in full as an exemplar of intransitives in "ko." The transitives of the same conjugation (III.) have the like *euphonic* changes, and for the rest [their conjugation may be determined by analogy with the help of the premises already supplied. The indicative present singular alone varies, and that is set down in the classification of verbs. The radical "k" becomes "g" in the active voice, and "ng" in the passive and causal, *e.g.* pók-ko, póg-u, póng-yi, póng-páto.

ITERATIVE MOOD.

Raise repeatedly, pókko, mókho, bwákko.

It is formed by adding to the imperative of the main verb, whether transitive or intransitive, the word mókho (sense unknown), and to it subjoining the verb bwakcho, to remain, as in the last mood to which this is very nearly allied in sense. There, however, we have compound conjugation according to the sense of the primary and secondary verbs, which are both conjugated with mókho, immutable, between them, *e.g.*

Ípo mókho bwákho, sleep repeatedly	Pókko mókho bwákko, raise repeatedly
Ímgna mókho bwanggna, I sleep repeatedly	Pógu mókho bwanggna, I raise repeatedly
Ípti mókho bwakti, I slept repeatedly	Póktong mókho bwakti, I raised repeatedly

And so on through the whole of the intransitive conjugation in "po" (VI.) and of the transitive in "ko" (III.) The definite sense of the present and preterite, I am sleeping, I was sleeping, I am raising, I was raising, is likewise thus expressed.

Conjugation with auxiliar and substantive Verb and Participle.

Of the four substantive verbs, ká, khé, gnó, and bwá, the three first express essence and entity, the last presence, being in a certain place, corresponding respectively to the Khas ho and cha, and to the Newári kha and du, or chóna. Of the Báhing four, the last, or bwá, is alone used as an auxiliar, and it is compounded with the (apparent) participle or gerund aforegone, or jasogno, in order to make a definite present (or future) and past tenses of any and every verb in the manner

* Observe the change of the radical k into ng and m, bwak-ko, bwang-gna, bwam-me It is constant in all verbs neuter in "ko."

there seen, *e.g.*, písogno bwanggna, I am coming; písogno bwakti, I was coming; teupsogno bwanggna, I am beating; teupsogno bwakti, I was beating.

Remark.—Jásógno, which gives the continuative and the definite form of the tenses above, seems to spring from the impersonal past gerund in "so," jaso vel jasomami. But that is not clear, though it *be* so that, whatever else jasogno is, it is a form of every verb usable with the auxiliar in conjugation.

Jásogno bwanggna = I am eating.	Písogno bwakti = I was coming.
Jásogno bwakti = I was eating.	Brésogno bwanggna = I am summoning.
Pisogno bwanggna = I am coming.	Brésogno bwakti = I was summoning.

Causal Verbs.‡

All verbs whatever can be made causal by adding to their root the transitive verb páto, from pá,§ to do or make. But pá makes its regular transitive in "wo," páwo.

---

* Jwákko is an intransitive in "ko," meaning to arrive, and it can be conjugated separately; but, with that love of specialisation which is so characteristic of Kiránti verbs, it is always used in conjunction with the verb to come (píwo) or to go (díwo). Jwagdíwo as a single word can be also so conjugated. The remarkable thing is that each verb of the compound can be conjugated.

† You can also say Jwakkodíwo, using the full form of each verb in the imperative as in the indicative.

‡ Besides its ordinary use, the causal form of the verb is frequently used, especially in its middle voice, as a passive. Thus, jápáso is be thou eaten, or suffer thyself to be eaten, implying voluntariness on the part of the patient; and so hémpáso is let thyself be kissed. All three voices, however, can be used thus, and frequently are so, whenever the complex pronominalisation of the primary verb causes embarrassment. The passive use of the causal is very common in Himálaya, and is often, as in Newári, the only substitute for a passive. This is not wonderful in so crude a tongue as Newári: it is so, however, in the Kiránti language, which possesses the great secret of the most refined conjugation in its neat personal suffixes and its power of euphonic compounding. Owing, however, to too much attention to the agents and too little to the action, the Kiránti verb, with all its constructive richness on one side, shows equal poverty on another, and hence the passive use of the causal form.

§ The root pá, pí, in Váyu, an allied Himálayan tongue, is the same as the Dravidian causative.

Páwo is do; páto, do for him, on his behalf; and this leads me to observe that every transitive verb, save those in "to," has the following six forms:—

1. Teuppo, strike him, active transitive in "po."
2. Teum-so, strike thyself, reflex transitive, or middle, in "so."
3. Teum-yi, strike me, passive in "i."
4. Teup-to, strike it for him, active transitive in "to."
5. Teum-so, strike it for thyself, middle in "so."
6. Teupti, strike it for me, passive in "ti."

So also pá, to do, has pá-wo, páso, páyi; páto, páso, and páti: and kwó, to see, has kwógno, kwóso, kwóyi; kwoto, kwoso, and kwoti: and pok, to raise, has pokko, pokso, pongyi; pokto, pokso, pokti; and in like manner every other transitive, except those in "to" as the primary form. It is the secondary form of the transitive of the verb to make, or páto, which is used for constructing causals, but yet it takes the passives in "i," not "ti," when thus employed, though, when used separately, it assumes its regular form in "ti"—an anomaly, like that of the use of the reflex or middle voice in one form and two senses (2, 5).

But besides the regular causal formed by páto added to the root of the main verb (*e.g.*, kwopáto, cause to see), there are other means of constructing causals, which shall be first mentioned before proceeding to exhibit the conjugation of the former.

These means are, first, the hardening of the initial consonant of an intransitive, as—

Dokko, fall.	Tokko, cause to fall
Dyúmmo, become	Thyúmmo,* cause to become
Gúkko, be crooked	Kúkko, crooken or make crooked
Gíkko, be born	Kíkko, beget or give birth to
Jíto, be torn	Chíto, tear
Bokko, get up	Pokko, raise, or make get up
Bukko, be burst	Pukko, burst

Second, by dropping the intransitive sign, whatever it be, and substituting the transitive sign in "to," or "ndo" (do).

Píwo, come	Píto, bring
Ráwo, come	Ráto, bring
Díwo, go	Díto, take away
Láwo, go	Láto, take away
Kúwo, come up	Kúto, bring up
Yúwo, come down	Yúto, bring down
Dwakko, be desirous or long	Dwakto, desire it, or long for it
Túgno, drink	Túndo, cause to drink
Wogno, issue	Wondo, extract
Glúgno, enter	Glúndo, insert
Cháyinso, learn	Cháyindo, teach, *i.e.*, cause to learn
Níso, sit	Níto, set down, or seat him, or cause to sit
Khleuso, lie hid	Khleundo, hide it

I need not point out what an important analogy with the Dravidian tongues the first (nay, both) of these two processes presents, but I may add that this analogy is in perfect keeping with the further habit of this Himálayan language of hardening or doubling the indicative present sign by way of making a preterite, as

Myelda, he is sleepy	Myelta, he was sleepy
Sáda, he kills	Sáta, he killed
Kwáda, he puts on the fire	Kwáta, he put on the fire
Gramda, he hates	Gramta, he hated
Teuba, he strikes	Teupta, he struck
Bréta, he summons	Brétta, he summoned
Khleuta, he conceals	Khleutta, he concealed
Soda, he tells it	Sotta, he told it

Add the absence of conjunctive (relative) pronouns, and of conjunctions proper (and), with the manner in which these are replaced, and all sentences held together,

* Perhaps tyummo; hardening or aspirating, rarely both. But there are a few instances of it in Báhing and also in Váyu—as dum, become; thumto, cause to become.

by participles carrying an inherent relative-pronoun sense, and by gerunds which are essentially copulative. It is, however, but fair to add that these are traits by no means exclusively Dravidio-Himálayan. Still they are a sound part of the answer which may be given to those who, like Caldwell, assert that there is nothing Dravidian in the languages of Himálaya.*

Add to these analogies the common habit of Báhing and Támil of annexing the conjugational sign to the imperative, and that that sign is differently applied to intransitives and transitives (leaving the style of the indicative to difference them); and further that the conjunct pronomenalisation of their verbs and nouns is by prefixing in regard to the nouns and suffixing in regard to the verbs, not to mention several other analogies cited in the sequel, and Messrs. Müller and Caldwell will find it difficult to maintain their assertion that there is nothing Dravidian in the structure of the Himálayan tongues!

Many verbs identical in form in the imperative, yet differ in sense, as khiwo, n., tremble, and khíwo, a., quarrel; úto, n., fall, úto, a., fell. Many, again, materially change their sense in passing into the causal or transitive form from the intransitive or neuter; and, lastly, the causal form of neuters and of transitives, though very generally of the normal construction in páto added to the root (ippo, sleep; impáto, cause to sleep), yet in the case of many verbs of both sorts in "po" and in "gno" is not so, the alteration being effected by changing their sign into the transitive "to" vel "do" sign, as ippo, sleep; ipto, cause to sleep (a synonyme of impáto); túgno, drink; túndo (= tupáto), cause to drink. When the sense is much altered in such transition, the derivative causal of a neuter is constantly regarded as an independent word and primitive verb, and the neuter takes the normal causal form, thus láwo, n. = go, has láto for its causal; but láto being used to signify take away, lápáto is made to express the precise sense of cause to go.

All this shows, when taken in connection with the general transformability of all transitives not primitively in "to" into that form, the pre-eminent transitive and preterite character of that widely-diffused sign.

It also shows how apt causal is to be equivalent to transitive, another widely-prevailing Turanian trait, and one harmonising with the almost identity of neuter and intransitive. And here we may remark another special characteristic common to the Himálayan and Dravidian tongues, viz., double causation. Thus, in Báhing (and it is the same in many others of our tongues), ippo, sleep; impáto, cause to sleep; impápáto, cause to cause to sleep. Gikko, be born; kikko or gingpáto, cause to be born; kingpáto or gingpapáto, cause to cause to be born; to which we may add kingpápáto, expressing causation in the *third* degree from the primitive gikko; and the like holds good with regard to every neuter undergoing a similar change with gikko.

I proceed now to exhibit an exemplar of the normal causative form of verbs, taking the instance of the verb to eat. Root, já; causal transitive, jápáto; causal reflex, jápáso; causal passive, jápáyi. The prefixed root does not affect the grammatical form of the auxiliars save as above stated. Páto, therefore, in this combination, will afford a sample of all transitives in "to" which change the t into d. Of the unchanging transitives in "to" I have given a model in bréto. I shall here give páto in full in its combination with já, as a sample of the changing conjugation in "t" (see conjugation X.), merely premising that páso, as an intransitive in "so" (see conjugation XIII.), and páyi, as a passive in "i" (yi to keep the vowels apart merely †), have already been given in full, as also the passive in "ti" (vide bréto).

---

* See note at p. 356.

Teub-u, I strike	Wa popo, my uncle
Teub-i, thou strikest	I popo, thy uncle
Teub-a, he strikes	A popo, his uncle
Pog-u, I raise	Wagu, my hand
Pog-i, thou raisest	I gu, thy hand
Pog-a, he raises	A gu, his hand
Bret-u, I summon	Wa daubo, myself
Bret-i, thou summon'st	I' daubo, thyself
Bret-a, he summons	A daubo, himself

Remark.—Wa, i, a, the pronominal adjuncts, are perfectly distinct from the separate pronouns; and wa being = u, the adjuncts of verb and noun tally to identity. Here, then, is the alleged diagnosis of Dravidianism more fully developed than in any Dravidian tongue.

† M also requires the y; for example, teum-yi, strikes me, he, or thou = I am struck; see remarks aforegone. It is because the *agent* may be he *or* thou (any one) in the passive, that the passive runs so near parallel with the second *special* form of the verb.

Translation.

A certain person went to his prince to complain of a man who was in the habit of coming constantly to his house to make love to his wife, but whom he could never contrive to identify. To his sovereign he said, "Relying on your justice, I appeal to you to have this man arrested." The Rájah thereon gave the petitioner a phial filled with scented oil, and said to him, "Give this phial to your wife, and caution her at the same time not to give it to any one." The man did as he was bade, and the Rájah, when he was gone, instructed his spies to look after the matter, and to seize and bring to his presence any person they might detect coming from the plaintiff's house whose clothes had the scent of atter.

By and by, the lover, finding an opportunity, went as before to his mistress, who rubbed the atter on his clothes, and said to him, "My husband desired me to give this atter to no one, but you are my life, my soul, how should I refuse it to you? If you like it, take it. I can have no other use for it."

As the lover, thus anointed with atter, thereafter left the house of his mistress, the spies of the Rájah, who were on the look-out for him, seized him and carried him to the Rájah.

The Rájah thereon sent for the woman's husband, and said to him, "This is your wife's lover. If you please, kill him; if you please, let him go."

ON THE VÁYU OR HÁYU TRIBE OF THE CENTRAL HIMÁLAYA.

The Váyus, vulgarly called Háyús, inhabit the central Himálaya, and the central region of that part of the chain.* They are subjects of Népál, tenanting the basin of the river Kósi between the confines of the great valley of Népál proper and that point where the Kósi turns southwards to issue into the plains. The Váyus belong to that interesting portion of the Himálayan population which, in the essay adverted to, I have denominated the broken tribes—tribes whose status and condition, relatively to those of the unbroken tribes, sufficiently demonstrate that they are of much older standing in Himálaya than the latter. The Váyus are in an exceedingly depressed condition, gradually passing to extinction probably. Their numbers do not now exceed a few thousands—how many, I have no means of ascertaining.

Their high antiquity and the complex character of their language, give them, especially in connection with other tribes of Himálaya similarly characterised, very great interest as an element of Himálayan population. They consider themselves as a single people distinct from all their neighbours. Their language, which has no marked dialects, and is quite unintelligible to any but themselves, supports this view. So also does their perfect community of habits and customs, though they recognise certain distinctions among themselves, of no practical importance, but marked by specific designations, of which the chief are Yákúm, Dóphóm, Konsino, Bálung, Phoncho, Kámaléchho, &c.

Bálung, I know, means exorcist in the Váyu tongue; and the other terms probably point to some perhaps now forgotten avocations. At all events, the people cannot now explain the force of the terms.

They have a tradition of a very remote time when they were a numerous and powerful people; but never having had the use of writing, their remote past is too vague for ascertain-

* See new edition of Essay on Physical Geography of Himálaya, printed under the auspices of Government.

ment: no foreign and cultivated people having ever noticed and recorded * their existence. The religious ideas of the Váyus are extremely vague, nor does their language afford any term for *the* Deity, or even for *any* deity; though they have, as usual, an exorcist, who is their only priest and physician, and to whom they look for relief from all those evils which malignant influence, whatever it be, afflicts them with. They are a very inoffensive industrious race, employed in the cultivation of the earth. Their use of the plough is noticeable from its rarity in these regions.

As it has been the chief object of this paper to illustrate the highly interesting language † of the Váyus, I shall not at present say more of their status, manners, and customs than by a reference to their own account of these conveyed in the statement subjoined to the language, as a sample thereof, and of which translation was there furnished. ‡

But the physical traits of the Váyu are of an importance second only to that of his language, and the following description will help to illustrate them:—

* Are not our Háyús, or Haiyus, the Haivas of Lakshmídhara's Shadbhásháchandriká, wherein he truly calls them Mountain barbaroi? See Muir's Sanscrit Texts, ii. 59. See also i. 181, voce Haihayas, Haihayas = Haivas = Haiyus = Háyus = Váyus.

† I meant to have prefaced the linguistic details by a few general remarks under the usual heads of Article, Noun, Pronoun, &c.; but time runs short, and the philological reader will readily apprehend these from the details themselves, whilst other classes of readers are little likely to pay any attention to the matter.

‡ See pp. 317–19.

§ See xxvii. Report for several of the other tribes.

Páte is rather below than above the standard height of his fellows, which may be taken at about five feet three inches. His colour is a pure isabelline brown, without the least trace of ruddiness in the skin or hair. The eye is dark hazel, and the hair long, straight, black, ample on the head, scant everywhere else.

Vertical view of the head oblate ovoid, rather wider behind than before, but not much, and flattish behind.

Bachycephalic. Facial angle very good, the mouth being only moderately salient, and the forehead of good height, forwardness, and breadth, but the chin defective. Eyebrows even, scantish. No beard or whisker, and a very small moustache. Eyes small, flush with the cheek, oblique, very wide apart, drooping upper lid bent down at the inner angle. Nose rather short, straight, depressed between the eyes, moderately salient elsewhere, broad at end, and having large round nostrils. Mouth moderately salient, the peculiar thickening of the upper gum, which chiefly causes the saliency, being not great, and the lips not tumid, only moderately full. Teeth vertically set, strong, white. Chin retiring and small. Zygomata and cheek-bones very salient to the sides, and profile flat. Front view of the face squarish, owing to the large angular jaws, which are as salient laterally as the zygomata.

Remark.—This young man's physiognomy is distinguished by the full Turanian breadth of head and face. Two others of his race whom I examined—a man of fifty-eight years and another of thirty years—had not the same breadth nor the same perfectly Kalmac eye. These men measured nearly five feet five inches, and were several shades darker in colour than Páte; and upon the whole I incline to regard them as more normal samples of the race than Páte. In a word, I think that I have sufficient grounds for concluding that the Váyus are in general somewhat darker and of a less decidedly Mongolic cast of countenance than the Lepchas (for example), from whose perfectly Turanian type they lean towards the Túrkic and Dravidian sub-types, which again approach the Arian, and are seen in the Kiránti tribe of the Himálaya more clearly and more frequently than in the Váyu tribe.

The elder of the two individuals above adverted to I was

enabled to examine rapidly whilst Mr. Scott photographed him. He was five feet four inches and a half in height, moderately fleshy, and dark brown. Vertical view of the head oblate. Wider and flat behind, greatest breadth between the ears, rising pyramidally from the zygomata to the crown of the head. Facial angle not bad, the forehead retiring, and narrowing only slightly, the mouth not being porrect, nor the chin retiring but pointed. Eyes remote, not small, but the upper lids flaccid and somewhat down-curved at the inner canthus. Nose pyramidal, not levelled between the eyes nor the extremity much thickened, but the nares large and round. Mouth large but well formed, with neatly-shaped lips and vertical fine teeth.

The younger man above alluded to was five feet five inches, and as dark as an ordinary native of the plains, whom he further resembled in his unflattened face, though his eye wanted the fulness and shapeliness of that of the lowlanders beside whom I placed him.

When these Háyús were placed beside some Dhángars of the Uráon tribe, the impression made upon me by a comparison of the whole was, that the physical type is one and the same in the highlanders and lowlanders; that the type is flexible to a large extent; and that the general effect of the northman's residence for ages in the malarious and jungly swamps of the plains is to cause the Turanian type to incline toward the Negro type, but with a wide interval from the latter. The Uráon, compared with the Váyu, has less breadth of head and face, more protuberance of mouth, and a better-shaped, larger eye, not down-curved next the nose; and it is thus, I conceive, that the Negro type differs from the Turanian.

VI.

ON THE KIRÁNTI TRIBE OF THE CENTRAL HIMÁLAYA.

It has been the main purpose of one of the preceding papers to examine the grammatical structure of the Kiránti language, as a second sample of that class of Himálayan tongues (the

Váyu tongue, already examined, being the first) which I have elsewhere denominated the pronomenalised or complex.*

The opinion of such scholars as Müller and Caldwell, that thè Himálayan tongues have nothing Dravidian about them, can thus be tested, and, I think, shown to be a mistake; and it will be further demonstrated, I trust, by these and other investigations which I hope soon to complete, that the Himálayans are closely connected as well with the southern as with the northern members of the family of Túr—members by no means so disjoined and dissimilar as it is the fashion to represent them.

As a supplement to the grammatical details, I will now give such a sketch of the Kiránti people, as at present existing in Népál, as will, I hope, add to the interest and value of the philological portion of my essay.

The Kirántis, on account of their distinctly traceable antiquity as a nation and the peculiar structure of their language, are perhaps the most interesting of all the Himálayan races, not even excepting the Néwárs of Népál proper.

By means of the notices contained in the classics of the East and West, we are assured that the Kiránti people was forthcoming in their present abode from 2000 to 2500 years back, and that their power was great and their dominion extensive, reaching possibly at one time to the delta of the Ganges. Moreover, the general tenor of these classical notices is confirmed by the Vansávalis, or chronicles of Népál proper, which show a long line of Kiránti sovereigns ruling there from the mythic age of the Shepherd kings (Gópál) down to the fourteenth century of our era. And, lastly, these distinct historical data harmonise with a well-known tradition, which assigns a very unusual (in these regions) amount of power and population to the "many-tongued" Kiránti. We know not when the Kirántis were expelled from the plains of India; if indeed they ever held permanent possession there. But it was the Mall dynasty of Népál proper which, about the middle of the fourteenth century, expelled them from the great valley; and the Sáhs of the eastern or Vijayapur branch of the Makwánis, by whom their independence in the mountains, probably about the same period, was

* See Essay on Physical Geography of Himálaya, and other papers, issued under the auspices of Government.

greatly trenched on; whilst the Sáhs of the house of Gorkha, now sovereigns of the modern kingdom of Népál, completed the subjection of the Kirántis about a century ago.

Adverting to the high recorded antiquity of the terms Kirát or Kiránt and Kiráti or Kiránti (vague nasal), as applied respectively to the country and people even to this hour, it is remarkable that the Kirántis themselves do not readily admit the genuineness or propriety of those terms, but prefer the names Khwombo vel Khombo and Kiráwa as their general personal designations, and seem to have none at all for their country. But the Kirántis, always ignorant of letters, have been now for a long time depressed and subdued; and, huddled as they now are into comparatively narrow limits, they are yet divided among themselves into numerous tribes and septs, speaking dialects so diverse as not to be mutually intelligible; and hence they are wont to think only of their sectional names, and to forget their general or national one.

It is difficult, owing to the varying limits at diverse eras, to ascertain the precise force of the territorial term Kiránt in the view of the people themselves. But the following statement of boundaries, divisions, and included septs may, I believe, be considered sufficiently accurate for all present purposes:—

Kiránt.

* Khas terms, and bearing topical reference to the Khas metropolis in the valley of Népál proper.

This is Kiránt in the larger sense, and including Khwombuán or Kiránt proper, and Limbuán or the country of the Limbus. The popular inclusion of the latter people is important and, I believe, well founded, as also that of the Yákhas, though both are often alleged to be not Kirántis. They are at all events closely-allied races, having essential community of customs and manners with the Kirántis, and they all intermarry; nor, probably, do the dialects of the Limbus and Yákhas differ much more from the Khwombu * tongue, than that tongue now does from itself, as seen in the several dialects of the septs set down above under "Middle Kiránt." The comparative vocabulary already submitted to the Society will go far to decide these questions, when taken in connection with that grammatical analysis of the Limbu tongue which I am now engaged on. The boundaries of Kiránt, in its three subdivisions, are:—

1. Súnkósi to Likhu,	Khwombuán.
2. Likhu to Árun,	
3. Árun to Mêchi and Singilela ridge,	Limbuán.

Such are the territorial limits of the extant Kiránti race, in the larger sense. Their numbers probably do not now exceed a quarter of a million; but the tradition, which I referred to above, assigns two and a quarter millions as the amount of their population at some remote and not well ascertained period, when their country was customarily spoken of as the "no lákh Kiránt," and the phrase was interpreted to mean that a house-tax, at two annas per family, yielded nine hundred thousand annas, whence, if we allow five souls to a family, we shall obtain two and a quarter millions of people for the Kirántis, inclusive of the Limbus and Yákhas, † and possibly the Váyús

* Potius Khambo. The intercalated "w" is a dialectic peculiarity of Báhing. Khombo = Khampa, whence we may infer that the Kiráutis came from Eastern Tibet or Kham.

† See Tennant's "Ceylon," voce Aborigines, and there called Yakkhos. The identity of name is at all events curious, more especially as there is much resemblance of form, manners, and customs between the aborigines of the Himálaya and of Ceylon; *e.g.*, the "devil dance" of the Yakkhos of Ceylon tallies wonderfully with a similar ceremony described by me in the essay on the "Kócch, Bódo, and Dhimál," vol. i. 133 f. The Mahavansa refers to a certain Yakho who dwelt in Himálaya and became a teacher of Buddhism. This, too, is significant, and imports that one of the Yakha tribes of Himálaya was converted and instructed by some Bauddha sage or Vihar establishment, and sent into the hills to make proselytes among the hill-men.

also. The Kirántis occupy the central or healthful region of the mountains, and never descend, to dwell there, into the lowest and malarious valleys of that region. Consequently, they are not reckoned among the Áwalias, or tribes inured to malaria. Nor can they be placed among the broken tribes, great as is their antiquity and devoid as they long have been of political independence, and, moreover, allied as they are by the character of their language to the above two sections of the population of Himálaya or the Áwalias and the broken tribes (see Essay referred to above). The chiefs, or kings, of the Kirántis were called Hang or Hwang. There are, of course, none such now, nor have been for five centuries. Their village headman they still denominate Pasung, equivalent to Rai in the Khas tongue of their present masters the Gorkhalis. The Pasung has still, under the Gorkhali dynasty, a good deal of authority over his people. He collects their taxes and adjusts their disputes with but rare reference or appeal to the Rajah's courts.

Unlike most of the subjects of Népál, the Kirántis retain possession of the freeholds of their ancestors, which they call walikha, and the owner, thangpung hangpa. Each holding is extensive, though not generally available, owing to the high slope of the surface, for the superior sort of culture. The boundaries of an estate are defined by the run of the water. The tax paid to the Government by each landholder, or thangpung hangpa (literally, lord of the soil), is five rupees per annum, four being land-tax, and one in commutation of the corvée.

The general style of cultivation is that appropriate to the uplands, not the more skilful and profitable sort practised in the level tracts; and though the villages of the Kirántis be fixed, yet their cultivation is not so, each proprietor within his own ample limits shifting his cultivation perpetually, according as any one spot gets exhausted.

Arva in annos mutant et superest ager. The plough is sometimes used, but very rarely, and the use of it at all is recent and borrowed, nor has the language any term for a plough. The produce is maize, buckwheat, millets, pease, dry rice, and cotton. The general, almost exclusive, status of this people is that of

agriculturists. They did not till lately take military or menial service.* They have no craftsmen of their own tribe, but buy iron implements, copper utensils, and ornaments for their women from other tribes, and supply most of their simple wants themselves. The useful arts they practise are all domestic; fine arts they have none, nor ever had; no towns, and only small villages of huts raised obliquely on the outer side on wooden posts some three to six feet, so as to get a level on the slope of the hill, size small, because the children separate on marriage, walls of thick reed, plastered, and the pent roof of grass. Each family builds for itself. The women spin and weave the cotton of native growth, which constitutes their sole wear, and the men and women dye the clothes with madder and with other wild plants—whereof one, a climber, yields a fine black colour. They make fermented and distilled liquors for themselves, and use the former in great quantities—the latter moderately.

The Kirántis have not, nor ever had, letters or literature.† Their religious notions are very vague. They have no name for the God of gods, nor even for any special deity whatever, though the term "mang" may be construed deity, and that of "khyimmo" or "khyimmang," household deity or penate. Nor is there any hereditary priesthood, or any class set apart and educated for that office. Whom the mang inspires, he is a priest, and his duty is to propitiate the Khyimmang or Penate of each family by an annual worship celebrated after the harvest, and also to perform certain trivial ceremonies at marriages and deaths, but not at births. The priest is named Nakchhong, and he has, moreover, once a year, to make offerings to the manes (samkha) of the ancestors of each householder, or rather to all the deceased members of each family.

The Kirántis believe heartily in the black art, and call its professor Krákrá, Kúnyamayáwo, &c. The professional anta-

* Jang Bahadur has lately raised some Kiránti regiments. He is wise, and has seen in time and provided against the risk of a too homogeneous army. The Kirántis have of late freely taken menial service with us in Sikim.

† The Limbus, like the Lepchas, have an alphabet seemingly original, but neither people has made much use of it. I submitted these alphabets to the native and English scholars of Madras, Ava, and Arrakan, and was told they could not be traced to any Indo-Chinese or Dravidian source. I had priorly received a like disclaimer from the Lamas of Tibet.

gonist of this formidable person, who undoes the mischief, bodily or mental, which the other had done, who is at once exorcist and physician, is named in the various dialects, Janicha, Mangpa, &c.

There are only two religious festivals per annum: one to the Khyimmo or Penate, and the other to the samkha or souls of the deceased.

As already said, birth is not attended by any religious observances.

The Kirántis buy their wives, paying usually twenty-five to thirty rupees, frequently in the shape of copper household utensils. If they have no means, they go and earn their wife by labour in her father's family. They marry usually at maturity —nay, almost universally so. Divorce can always be had at the pleasure of either party; but if the wife seek it, she or her family must give back the price paid for her, and all the children will remain with the husband in every event of divorce. The marriage ceremony is as follows:—The priest takes a cock in his left hand and strikes it on the back with the blunt side of a sickle till blood flows from its mouth. According as the blood marks the ground, the priest prophesies that the offspring will be boys or girls; and if no blood flow, that the marriage will be childless. This is the essence of what passes, and it seals the contract.

The Kirántis bury their dead on a hill-top, making a tomb of stones loosely constructed. The burial takes place on the day of decease. The priest must attend the funeral, and as he moves along with the corpse to the grave he from time to time strikes a copper vessel with a stick, and, invoking the soul of the deceased, desires it to go in peace and join the souls that went before it. The law of inheritance gives equal shares to all the sons, and nothing to the daughters, unmarried or married. Concubines are unknown. Polygamy is allowed and not uncommon. Polyandry unheard of and abhorred.

Tattooing is unknown. Boring of ears and nose common with the women; rare with the men. The hair is usually worn long and so as to hide the Hindu-like top-knot that is, however, always forthcoming. The general character of the Kirántis is rather bad among the other tribes, who consider

them to be somewhat fierce and prompt at quarrelling and blows, especially in their cups,—a state very frequent with them. But at Darjiling they have now for fifteen years borne an excellent character as servants, being faithful, truthful, and orderly, so that their alleged fierceness should, I think, be called manly independence, or be referred to their long-past days of political independence and martial habits.

I proceed now to the physical character of the tribe. Premising that I have long been habituated to these physical observations, by no means confined to the hills, I would repeat once * more that the Himálayan type, though upon the whole Mongolian, is not to be judged (any more than the African one by the Negro) by the Kalmak exaggeration of that type; and, moreover, that the type exhibits here, as to the north and to the south of us, a large range of variation, indicating, like the lingual type, that the Himálaya has been peopled by successive immigrations of northmen belonging to many, probably to all, of the various sub-families into which the restless progeny of Túr has been (I think prematurely) divided by European philologists and ethnologists. I think, moreover, that I can discern this sort of accord between the physical and lingual types, to wit, that the tribes with simple languages have more, and the tribes with complex languages have less, of the Mongolian physical attributes, after careful elimination of the presumed effects of mixture of breed (and such facts are always notorious on the spot) where such mixture has taken place. Thus a Lepcha, or Gurung, or Magar, or Murmi, to a simple language unites a palpable Mongolian physiognomy and frame; whilst a Kúswár, a Dhimál, or a Kiránti, with a language much allied to the higher Túrkic, Ugrofinnic, and Dravidian types † possesses a face and form tending the same way.

* See my Essay on Kóech, Bódo, and Dhimál, p. 113 ff.

† The complex pronomenalisation of the Kiránti verb points to a special connection with Müller's subdivision, embracing, as far as we yet know, the Hó, the Sontal, and the Munda proper. The numerous traits of resemblance of the pronomenalised Himálayan tongues to the cultivated Dravidian have been pointed out, here and there, in the course of the foregoing analyses of two samples of the former. But observe that Hó and Sontal, like Túrki and Kúswár, suffix personal signs to noun and verb. Váyu and Kiránti, like Dhimáli, follow the Dravidian rule of prefixing to noun, suffixing to verb. This difference seems great, but is not perhaps really so, for the vulgar and sacred dialects of Egyptian, which were, says Poole, one tongue, nevertheless had this difference.

I will now describe my samples, adding, lest I should be supposed to have selected them unfairly, that they are men long in my own service.

No. 1. A Bontáwa, age 55. Head long, narrow, vertical view elliptic, equally wide fore and aft, widest between the ears. Front view of the head and face oval, with the cheek-bones little protruded and the forehead not narrowing upwards. Profile or side view good, nearly vertical, the mouth not being at all inclined to prognathism, and the forehead very little retiring, but chin somewhat defective. Forehead of good height and breadth, nearly as wide as the cheek-bones. Eyes of good size, remote; upper lid flaccid, but hardly perceptibly bent down next the nose. Nose long, straight, pyramidal, well elevated though thick, and with the nostrils elongated, not round. Mouth well formed, not protuberant, of good size, and having shapely lips and vertical teeth not at all exposed, chin not retiring, but not advanced, and rather defective. Jaws neither heavy nor square. Colour a clear light brown, deeper and less olive than usual. No trace of ruddiness. Hair jet black, ample, straight, glossy, strong but not coarse. Moustache full and jet black. No whisker. Eyebrows scanty and horizontal. No hair on chest. Figure good, but trunk and arms long, and legs short. Very

moderate development of bone or muscle for a highlander, and scarcely more than in a plainsman.

No. 2. A Báhing,* 30 years old. Head broader and shorter, vertical view oblate ovoid, wider behind than before, but not flattened behind. Front view of the face shows (like the head) more breadth than in No. 1, and is somewhat square, owing to the projection of the cheek-bones and of the angles of the jaws. Profile vertical, as in the last, with very little saliency of the mouth, a vertical but somewhat narrow forehead, and a chin flush with the front of the jaw. Forehead less fine than in the last, vertical to the front, but somewhat narrow, or rather seeming so, owing to the lateral projection of the jaws and cheek-bones. Eyes of good size remote, showing faintly but distinctly the usual flaccidity and deflection towards the nose, of the upper lid. Nose, as in the last, long, straight, pyramidal, broad, but not depressed. Nostrils large and round. Mouth of good size and shape, with moderately full lips, of which the upper has a tendency to advance more than the lower, owing to the normal thickening of the gum. Teeth fine and vertical, and not at all exposed. Chin devoid of the prominent roundness of the part, flush with the jaw in front. Jaws heavy and angular. Colour, as in the last, pale ruddy brown, deeper and less dull than the usual isabelline colour. Hair jet black, straight, strong. No whisker. A scanty moustache. Eyebrows full. Chest, legs, and arms hairless. No more development of bone or muscle than in the last, and figure, as before, good, but noticeable for length of trunk and arms.

No. 3. A Thúlung, 22 years old, has the breadth of head and face of the last, vertical view of the head showing great and remarkably uniform width in proportion to length. Profile line vertical, as before, and all the details of the features wonderfully similar, as in a strong family likeness, and figure also and colour.

* Is our Báhing the Báhik of Muir's Sanscrit Texts, ii. 482? His Aratta may be the Aratt of Sikim, and his Khas is no doubt the now dominant tribe of Népál. Muir's authority indeed says that the Báhik were a Sanscrit-speaking race, but that may be accounted for by the ignorance displayed by Brahmanical writers on this subject, and by their determination to find degraded Kshatriyas in all the great nations and peoples bordering on Aryavartta; *e.g.*, the Burmese are with them degraded Kshatriyas!!

General Remark.—All these three men have a depth of colour and defect of bone and muscle assimilating them to the lowland Turanians, generally and differencing them from the highlanders generally, but especially from the Palusen or Cis-himalayan Bhotia, the Gúrung, the Súnwár, the Múrmi, the Magar, and the Lepcha; and the Bontáwa has a head and face carrying on the resemblance with the lowland Turanians, and which I believe to be so frequent among the Kirántis as to deserve to be called the rule, not the exception. In conclusion, I may perhaps be permitted to say, as the result of long years of practised observation, that the effect upon the Turanian north-men of passing from the cold high-and-dry plateau of "Asie Centrale," down the various steps of the Himálayan ladder into the hot and moist plains of India, is to diminish the volume of bony and muscular development, to diminish also the extreme breadth of head and face, with the consequent wide separation of all the double organs of sense, and to modify the defects of the eye, giving it a freer and straighter aperture and less flaccid upper lid; moreover, that such tribes as, in the throng of successive immigrations, have been broken, barbarised, and driven to seek refuge in malarious tracts, seem to manifest a tendency to pass from the low Turanian to the low African or Negro type;* and lastly, that after these effects have been produced in the course of numberless ages, it must always be unsafe to dogmatise upon physiological or philological grounds only respecting the *special* relations and characteristics of any given tribe without abiding advertence to the general relations and characteristics of such tribe, and to the proof of both that may be had by carefully seeking out and weighing all the available evidence, whether physiological or philological, moral or traditional.

The evidence of any reflux towards the north of the great tide of Turanian population flowing wave after wave over India, through the numberless passes of the Himálaya, and also, perhaps, round the Western and Eastern extremities of the

* Narrowness of head and face and projection of mouth are the great marks of the Negro type. Now, I have an Uráon in my service in whom these marks united to a very dark skin are conspicuous, and his lips are very thick and his eye good, and his hair crisply curled, but not at all woolly.

chain, is faint, seeming to be confined to the Néwár tribe of Népál proper, who have a tradition of their return to Népál after having reached so far south as Malabar. Nor are there wanting coincidences of arbitrary customs, of the shape and use of agricultural and other implements, and of words, and even of grammatical forms, to countenance and uphold that tradition, as I have already adverted to in my paper on the Nilgirians.
